Wialan Technologies, Inc. Reports its Annual Results

2014 Was A Banner Year for Wialan!!

SUNRISE, FL--(February 10, 2015) - Wialan Technologies Inc. (OTC Pink: WLAN) (the "Company"), the next generation Wi-Fi delivery, security surveillance and disaster preparedness systems provider, today published its operating results for the 12 months ended December 31, 2014 and is advising its supplemental information regarding the current status of its business. (The full quarterly report can be accessed via www.otcmarkets.com under the WLAN trading symbol for "Filings and Disclosures"),

2014 was a banner year for the Company. We grew the business from a sleepy privately held LLC to a company today publicly traded on OTC with a market cap. of approximately $ 9.8 million. We have diligently worked through the growing pains following the reverse merger at the end of August, 2013, we have retired some of the convertible notes we inherited and we continue to reach out to financing sources for additional capital to catapult our growth. Our innovative, low cost, highly effective, combined Wi-Fi/Public Address/Security Surveillance system, with Wi-Fi boosting capability, has captured significant attention from municipalities, governments, and private businesses as we continue the successful rollout in parks and public places in Miami Dade County, as well in international locations such as the Dominican Republic, South Africa, Latin America and the Caribbean . Revenues for the 12 months ended December 31, 2014 soared to $ **188,782** (compared with revenues of only **$ 20,174** for the 12 months ended December 31, 2013).

Key achievements during 2014 were as follows:

- We successfully continued the rollout installation of the 4.9 GHz band Wialan product in Miami Dade County, under our overall multi-year agreement with the County.

- We attended a high profile ribbon-cutting ceremony on August 8, 2014 at the first Dominican Republic school fully operating the Wialan technology. This was attended by local government officials and senior management of both the Company and Hughes Network. This installation and successful operation of the Company's technology occurred at the Cigar Family Community School located in the Bonao region of the Dominican Republic and has approximately 500 students from pre-school the 12th grade. It is part of the Cigar Family Community Complex which includes the Elementary and High Schools, Health Clinic, Baseball and Basketball Stadiums, Solar Energy Station and Organic Farm. The Cigar Family Community Complex serves well over 5,000 families and has achieved tremendous results and local acclaim. With this successful working model completed, working with our local business partners, the road is now open for the Company to submit bids to the government of the Dominican Republic to roll out the Wialan system to many more schools in the Dominican Republic beginning in 2015.

- We are proud to have been one of the finalists in bidding for the installation of its Wi-Fi communications solution to be integrated into a comprehensive disaster recovery system serving New York City. While we did not ultimately win the bid, the fact that we were able to bid toe-to-toe with multi-billion dollar industry giants speaks volumes of the Wialan technology and systems. We intend to continue to reach out to other municipalities to market the Wialnm system as a low cost, effective solution to their disaster preparedness requirements.

- The Company was chosen to exclusively supply enhanced Wi-Fi (boosted wireless internet connectivity) to participants and vendors at the Ft. Lauderdale Boat Show from October 30-November 3, 2014. The choice was made by Yachting Promotions, Inc.,DBA "Show Management", to provide secure, enhanced Wi-Fi hotspot coverage for the Ft. Lauderdale Boat Show based upon Wialan's previously successful demonstration of its Wi0Fi internet capabilities at the St. Pete Boat Show in December, 2013. Wialan provided a wireless internet protocol (IP) camera surveillance network at the boat show providing real-time HD camera viewing of selected boat show locations. In addition, Wialan demonstrated a Wi-Fi phone (VOIP) solution at the Ft. Lauderdale Boat Show using its proprietary Wi-Fi protocol software. It is estimated that the 2014 Ft. Lauderdale Boat Show was attended by over 120,000 people and exhibited some of the grandest yachts available for sale in the world.

- We are presently in negotiation with a major Caribbean country for a very substantial contract to install the Wialan solution throughout that location. More information will be announced as soon as this contract is executed and installation has begun (which we anticipate will occur within the first half of 2015).

We would like to thank our loyal and supportive shareholders for taking this journey with us, We realize that some may have felt that our progress has been slower than expected, but we continue to work hard to step-by-step successfully grow the Company. We are highly scaled and frugal with our operating expenses, while striving to grow revenue to break through to operating income. While we had hoped to achieve a stronger bottom line result in 2014 we were nonetheless able to reduce our net loss in 2014 by one-third, and we will continue to strive for stronger growth and higher revenue in 2015.
