Safe Harbor Statement

Sections of this document contain forward-looking statements, which reflect management's best judgment based on factors currently known but involve significant risks and uncertainties. Actual results could differ materially from those anticipated in these forward-looking statements as a result of a number of factors, including but not limited to risks more fully described in the "Risk factors" of the Company's filings with the OTC Markets. Forward-looking information provided pursuant to the safe harbor established by recent securities legislation should be evaluated in the context of these factors.

Management Discussion and analysis

With the refocusing of efforts on efficiency and the completion of the Company's contract in St Kitts, the sales suffered in the first quarter of 2015. However great strides have been made looking to expand the Company's offerings to include robotics as part of the efficiency line of products and services. Management is optimistic that these efforts will be rewarded going forward.

Operating expenses were in line with previous years.

Stockholders' equity has not recognized much of a variance. Business focus has narrowed by stepping away from previous efforts in the past diversification into the mining sector and towards more efficiency.

The company has deployed two business branches for the purpose of securing maximum market inroads in the shortest possible time period in order to generate cash flow, increase share value and mitigate market risks:

Energy conservation through demand side conservation from commercial, municipal and residential buildings

The company has secured the rights to distribute Thermonomics products in Canada in a Dealers Agreement. Furthermore the company is negotiating a second agreement, through a joint venture, to deploy Thermonomics in Jamaica and the Caribbean islands.

For all of these activities, the company plans to make use of the business relationships developed by 932678 Ontario Inc (Encompass) and Forest BioProducts Inc to increase its revenues through the sales of products that increase energy efficiency.

Efficiency through automation and robotics

Great Rock Development continues to explore opportunities to acquire robotics and navigation company to further efforts into the autonomous mining sector and other niche markets.

(i) The Company is not aware of any known trends, events or uncertainties that have or are reasonably likely to have a material impact on the Company's short-term or long-term liquidity;
