(b) TTM cash EBITDA is defined as the sum of the trailing 12 months' cash EBITDA and is used to provide a comparable annualized measure.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

YEAR ENDED DECEMBER 31, 2015

The following Management's Discussion and Analysis (MD&A) of the financial condition and results of operations of Pulse Seismic Inc. ("Pulse" or "the Company") for the year ended December 31, 2015 has been prepared taking into consideration information available to March 2, 2016 and is supplemental to the audited consolidated financial statements and related notes for the year ended December 31, 2015. Throughout this MD&A reference will be made in the text and tables to "2015", which refers to the year ended December 31, 2015, and to "2014", which refers to the year ended December 31, 2014.

The consolidated financial statements were prepared in accordance with International Financial Reporting Standards (IFRS) with comparative figures for the prior year. The consolidated financial statements and the MD&A were reviewed by Pulse's Audit Committee and approved by Pulse's Board of Directors. All financial information is reported in Canadian dollars. This MD&A discusses matters which Pulse's management considers material. Management determines whether information is material based on whether it believes a reasonable investor's decision whether or not to buy, sell or hold shares in the Company would likely be influenced or changed if the information were omitted or misstated. Readers should also read the cautionary statement in "Forward-Looking Information".

OVERVIEW

ABOUT PULSE

Pulse is a market leader in the acquisition, marketing and licensing of two-dimensional (2D) and three-dimensional (3D) seismic data for the energy sector in Western Canada. Seismic data is used by oil and natural gas exploration and development companies to identify portions of geological formations that have the potential to hold hydrocarbons. Seismic data is used in conjunction with well logging data, well core comparisons, geological mapping and surface outcrops to create a detailed map of the Earth's subsurface at various depths.

Pulse owns the second-largest licensable seismic data library in Canada, currently consisting of approximately 28,600 net square kilometres of 3D seismic and 447,000 net kilometres of 2D seismic. The library extensively covers the Western Canada Sedimentary Basin (WCSB), where most of Canada's oil and natural gas exploration and development occur.

Pulse calculates net kilometres of 2D data and net square kilometres of 3D data by multiplying the number of kilometres of seismic data in each 2D line and the number of square kilometres of seismic data in each individual 3D seismic dataset by Pulse's percentage of ownership in each.

SEISMIC DATA

Seismic data is an essential part of the oil and natural gas exploration and development process. Companies engaged in oil and natural gas exploration and development use seismic data to assist in exploring for and developing new reserves and in establishing the extent of existing reserves. In acquiring seismic data, an acoustical energy wave is transferred from an energy source at or near the surface of the Earth to the subsurface. These seismic waves reflect off the various geological beds or strata in the Earth's subsurface. Sophisticated sensors and recording instruments at the surface collect the reflected waves and convert them to digital form. The data is subsequently processed and an image of the subsurface formations is created, providing explorationists with valuable data on the potential of a particular area to yield oil or natural gas reserves, and assisting in the selection of drilling locations.

2D Seismic

2D seismic data is measured in linear kilometres and after processing provides a sectional illustration of geological formations directly below the line on which the data was acquired. 2D seismic can extend over a distance spanning many kilometres. Intersecting 2D lines can enable explorers to map large pools of oil and natural gas, but without the precision required for smaller or more complex targets. Exploration companies typically use 2D seismic to get a sense of the regional geology of an area they think is prospective for oil and natural gas. 2D seismic data continues to be used to generate regional leads and prospects in oil and natural gas exploration areas.

3D Seismic

3D seismic data is measured in square kilometres and after processing provides map-like overhead views as well as three-dimensional visualizations of the subsurface geology. 3D seismic data is shot in grids, generating a three-dimensional image of the subsurface. 3D seismic data enables a more precise definition of geologically complex targets, and facilitates precise placement of oil and natural gas wells. 3D seismic is generally used to zero-in on a discrete area of geological interest initially identified with 2D seismic. 3D seismic data is particularly important for horizontal drilling, unconventional plays (such as shale gas and tight sands) and complex conventional drilling. Typical 3D seismic surveys cover an area anywhere from a few square kilometres to several hundred square kilometres.

MISSION AND STRATEGY

Pulse is a pure-play seismic data library company focused on the acquisition, marketing and licensing of seismic data to the western Canadian oil and gas sector. The Company's business model is designed to generate a growing stream of cash flow by repeatedly licensing the data in its seismic data library to oil and natural gas companies. Pulse's strategy is to pursue growth opportunities that meet its financial and technical criteria while maintaining a low cost structure.

Current seismic processing and visualization software allows historical 2D and 3D data to be reprocessed and reinterpreted, thereby maintaining the technical usefulness and marketability of historical data and, through repeated licensing sales, generating recurring revenue. The Company is continuously seeking and evaluating opportunities to expand its data library by acquiring high-quality 2D and 3D datasets that cover some of western Canada's most prospective current exploration regions, are complementary to its current library, and are available at favourable valuations. This is accomplished in two ways. Pulse purchases proprietary rights to complementary 2D and 3D seismic datasets when the opportunity arises, and it partners with customers on surveys for new 3D seismic data. Participating customers are provided with a licensed copy while Pulse retains proprietary rights to the seismic data acquired. Pulse uses Company personnel to market and manage participation surveys, and subcontracts field acquisition activities to third parties.

ECONOMIC ENVIRONMENT AND SEISMIC INDUSTRY

Pulse has been successful throughout prior commodity price cycles, due to its low cost structure and ability to generate a high level of shareholder free cash flow, a non-GAAP measure that the Company considers important in evaluating its financial performance.

Pulse's success depends on its ability to provide seismic coverage over the geographical areas associated with certain geological development areas or "play types" that the exploration and development sector focuses on in a given period. Activity in various play areas is driven by commodity prices, geological understanding and the economic application of available technologies. Pulse works continuously to enlarge its coverage over play areas in which numerous producers are active for sustained periods.

The oil and natural gas exploration and development industry continues to shift towards natural gas reservoirs that are high in natural gas liquids and crude oil, in unconventional shale and less-permeable or tight formations that were not economic or technically possible to develop in the past. 2D and 3D seismic data are important tools for these plays. 2D seismic data is used to map the regional faults in shale gas prospects and 3D seismic data is used to map the exact contours of variable reservoirs, as well as small-scale fractures in shale formations, to plan accurate paths for horizontal wells.

Pulse's business results depend to a large extent on the level of capital spending on exploration activities by oil and natural gas companies. A sustained increase or decrease in the price of natural gas or crude oil, therefore, which could have a material impact on exploration activities, could also materially affect the Company's revenue, financial position, results of operations, cash EBITDA and shareholder free cash flow. The relationship is not direct, however, and the Company has generated high revenue in periods of weak oil and natural gas prices and vice-versa.

KEY PERFORMANCE INDICATORS

The key performance indicators used by Pulse's management to analyze business results are seismic revenue, in total and broken down between data library sales and participation survey revenue, net earnings, cash provided by operating activities, cash EBITDA, shareholder free cash flow, and the long-term debt to trailing twelve-month (TTM) cash EBITDA ratio. The definitions of cash EBITDA and shareholder free cash flow are provided in "Non-GAAP Financial Measures and Reconciliations". The calculation of TTM cash EBITDA and long-term debt to TTM cash EBITDA ratio are provided in "Liquidity, Capital Resources and Capital Requirements".

Results for the key performance indicators for the three months and year ended December 31, 2015, with comparative figures for 2014, are set out in the following table

	Three months ended December 31,			Year ended December 31,		
(thousands of dollars except per share data and ratios)	**2015**	2014	Variance	**2015**	2014	Variance
Data library sales	**8,759**	8,385	374	**21,214**	35,743	(14,529)
Participation survey revenue	**-**	-	-	**3,220**	-	3,220
Total seismic revenue	**8,759**	8,385	374	**24,434**	35,743	(11,309)
Net earnings (loss)	**658**	824	(166)	**(5,308)**	3,478	(8,786)
Per share basic and diluted	**0.01**	0.01	0.00	**(0.09)**	0.06	(0.15)
Cash provided by operating activities	**2,901**	13,122	(10,221)	**17,094**	27,985	(10,891)
Per share basic and diluted	**0.05**	0.23	(0.18)	**0.30**	0.47	(0.17)
Cash EBITDA	**7,043**	6,661	382	**15,121**	28,615	(13,494)
Per share basic and diluted	**0.13**	0.12	0.01	**0.27**	0.49	(0.22)
Shareholder free cash flow	**6,971**	6,515	456	**14,745**	27,858	(13,113)
Per share basic and diluted	**0.12**	0.11	0.01	**0.26**	0.47	(0.21)
Long-term debt to TTM cash EBITDA ratio				**0.00:1**	0.19:1	(0.19):1

The significant reduction in data library sales for the year ended December 31, 2015 is the main factor contributing to the decline in nearly all of the Company's key performance metrics from the prior year's periods. The Company experienced low data library sales in 2015 due to drastic cutbacks in the energy-producing sector's capital spending. Both transaction-based sales and traditional sales were lower in 2015 than in 2014. See "Transaction-based vs. Traditional Sales: Six year history".

The improvement in the long-term debt to TTM cash EBITDA ratio from 0.19:1 at the end of 2014 to zero at year-end 2015 was a result of Pulse repaying all remaining long-term debt during 2015. Cash EBITDA decreased to $15.1 million in 2015 from $28.6 million in 2014.

The Company added 136 square kilometres of new high-quality 3D seismic data to the library through the completion of the Peco South 3D survey in west central Alberta, which commenced in January 2015 and was completed in March 2015. The Company recognized 100 percent of the survey revenue and the initial amortization expense related to this survey in the first quarter of 2015.

CORPORATE HIGHLIGHTS

On December 16, 2015 the Company announced the annual renewal of its normal course issuer bid (NCIB) to purchase up to 3,509,326 common shares over the following year. During 2015, the Company purchased 1,625,400 (2014 – 2,101,277) common shares under the program at a weighted average price of $2.50 per share (2014 –$3.01), including commissions, for a total cost of approximately $4.1 million (2014 – $6.3 million). In total, since initiating the NCIB program in November 2006, the Company has purchased approximately 15.6 million common shares at a total cost of $39.4 million, while also issuing 14.3 million shares to acquire a significant database in 2010. Management believes that its common shares may from time

to time be undervalued and that such purchases are in the interests of the Company and its shareholders. The NCIB is an integral part of Pulse's capital allocation strategy.

On January 18, 2016 the Company announced that it had extended its revolving credit facility for an additional year with a syndicate of Canadian banks. The Company elected to reduce the facility's available borrowing amount to $30.0 million from $50.0 million. Up to $5.0 million of the revolving facility remains available as an operating line of credit. The three-year revolving credit facility's maturity date was extended to February 13, 2019. The accordion feature allowing the Company to increase the facility was increased from $20.0 million to $40.0 million leaving the total credit available at $70.0 million.

On January 26, 2016 the Company completed the acquisition of approximately 107,000 net kilometres of 2D seismic data and 58 net square kilometres of 3D seismic data, increasing Pulse's 2D seismic data library by 31.5 percent from approximately 340,000 net kilometres to approximately 447,000 net kilometres. The acquisition includes data spread throughout the Western Canada Sedimentary Basin and is complementary to Pulse's existing data. The purchase price of $3.65 million was funded through the issuance of 669,643 common shares plus $2.15 million in cash.

In 2015, Pulse paid three quarterly dividends of $0.02 per common share, totalling $3.4 million for the year.

With lower period-over-period seismic data library sales associated with challenging market conditions and the strong possibility of an extended downturn, in November 2015 the Company suspended the regular quarterly dividend of $0.02 per share.

SEISMIC INDUSTRY CYCLES AND SEASONALITY

Revenue fluctuations are a normal part of the seismic data library business and data library sales can vary significantly from quarter to quarter. Fourth-quarter data library sales have frequently been stronger than in other quarters, with seismic data sales being triggered as oil and natural gas companies finalize capital expenditures near year-end. Third-quarter data library sales are often lower than in other quarters due to slower business conditions during the summer months. Data library sales can, however, occur at any time during any quarter. This is due to the nearly continual changes in general oil and natural gas industry conditions, increased demand for seismic data covering a specific area or play, timing of public offerings of petroleum and natural gas rights (land sales), as well as corporate merger-and-acquisition, joint venture and asset disposition activity by Pulse's clients.

Participation survey revenue also varies significantly from quarter to quarter. The majority of new 3D seismic data is typically acquired under frozen ground conditions from November to March. Summer seismic programs can only be completed in certain areas that have drier ground conditions and can be easily accessed without environmental harm. In addition, the size and pre-funding levels of individual participation surveys can vary significantly.

OUTLOOK

Pulse's short-term outlook is more cautious than one year ago. The Company's first quarter seismic data library sales are likely to be weaker than last year's very low level, and traditional sales for the year could well be lower than in 2015.

So far in 2016, oil and natural gas prices remain weaker than one year ago and mineral lease auctions or "land sales" in Alberta and B.C. are at record lows. The Canadian Association of Oilwell Drilling Contractors forecasts that rig utilization in 2016 will average only 22 percent, with an average of only 159 out of western Canada's industry fleet of well over 700 rigs deployed. In late January, the Petroleum Services Association of Canada lowered its 2016 drilling forecast to 4,900 wells, compared to 5,300 wells in 2015 and 11,500 wells in 2014. All of this is suggestive of low traditional seismic data sales.

Prospects have, however, improved for a faster pace of merger and acquisition activity. With commodity prices remaining low and cash flows among E&P companies widely expected to decline or become negative, causing debt ratios to increase sharply, banks are expected to strongly encourage their borrowers to narrow bid-ask spreads and close transactions to create larger, more viable companies. Following a year of surprisingly low M&A spending and weak deal-flow, one research report stated that by mid-January 2016 there were 49 asset packages being marketed, covering over 4 million acres and 250,000 boe per day of production.

More M&A activity will create favourable conditions for additional transaction-based sales. The unpredictability of transaction-based sales, however, means that Pulse will continue to lack visibility as to its 2016 revenues. Corporate transactions are a necessary but not sufficient condition to generate seismic data relicensing fees; generating transaction-based sales depends on the nature of the underlying corporate transaction and on the acquisitor's plans for the assets in question. Please see "Transaction-based vs. Traditional Sales: Six-Year History" for a full explanation of transaction-based sale types and how they occur.

With its annual cash costs of approximately $6.0 million, low financing costs and no dividend, Pulse can continue to generate cash EBITDA and shareholder free cash flow at low revenue while buying back additional shares and maintaining the financial flexibility to grow its seismic data library. Pulse's revised $30.0 million credit facility is undrawn as of this date and includes an accordion feature for expansion to $70.0 million.

Pulse's long-term goal is to become Western Canada's largest licensable data library. The Company's history demonstrates that its revenues could accelerate at any time, and can double or triple with virtually no increase in costs, making Pulse a high-margin business under even modestly positive industry conditions.

DISCUSSION OF OPERATING RESULTS

SUMMARY FOR THE YEAR ENDED DECEMBER 31, 2015

Earnings (Loss) Before Income Taxes

Pulse generated a loss before income taxes of $6.3 million (($0.11) per share basic and diluted) compared to earnings before income taxes of $4.6 million ($0.08 per share basic and diluted) for 2014. The decrease was mainly attributable to the $11.3 million decrease in total seismic revenue and the recognition of an impairment loss of $937,000, offset somewhat by decreases in both operating and financing expenses and lower deferred income taxes.

Revenue

Total seismic revenue, including data library sales and participation survey revenue, was $24.4 million for 2015 compared to $35.7 million for 2014.

Data Library Sales

Data library sales are conducted under various types of sale contracts. These are classified as data library sales, library cards (discount agreement, paid on predetermined payment terms with periods of up to one year to select data), commitment cards (discount agreement, paid when data is selected and delivered within a one-year period) and review and possession agreements (client is provided with data to review and selects a portion of this data to license, with the agreement having set payment terms). Pulse plans to continue providing customers with a variety of contract options in order to maximize data library sales in the future. The unearned portion of a contract's value is deferred until Pulse's revenue recognition criteria are met, with data library sales revenue being recognized upon delivery of seismic data to the customer.

Data library sales consist of traditional sales and transaction-based sales. There are three main types of transaction-based sale: partnership or joint venture sales, corporate merger or acquisition sales, and asset disposition-related sales. For further information on transaction-based sales, see "Transaction-based vs. Traditional Sales: Six-Year History" below.

For 2015, seismic data library sales were $21.2 million compared to $35.7 million in 2014. The Company experienced decreases in both transaction-based and traditional sales.

In 2015, 96 percent of seismic data library sales were generated internally by Pulse's sales staff compared to 95 percent in 2014. Large seismic data sales and relicensing (change of control) fees are negotiated by the Company's internal sales and marketing department as opposed to the external brokerage community.

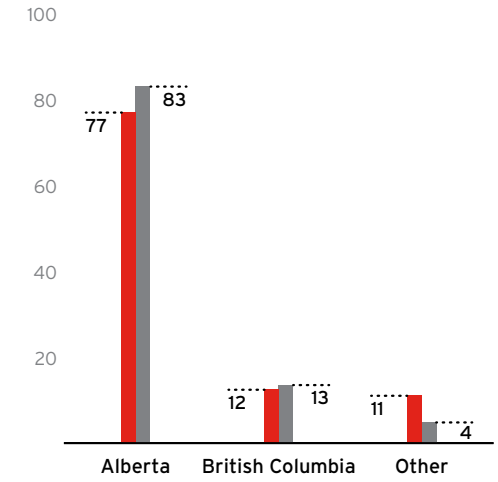

Geographical Sales Breakdown

The Company's customers are generally focusing on liquids-rich natural gas and oil pools found primarily in a broad corridor running from northwest of Calgary, Alberta, along the Foothills of the Rocky Mountains to the British Columbia border, as compared to "dry" natural gas more often found in British Columbia and on Alberta's eastern prairies. The pricing of natural gas liquids (such as propane, butane and condensate) is linked to crude oil, improving the economics of developing liquids-rich gas targets over "dry" gas. Natural gas has suffered from very low pricing for many years.

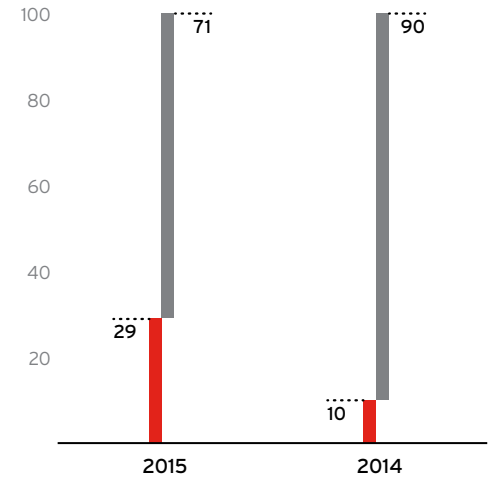

2D/3D Sales Breakdown

As 3D seismic licence contracts are generally larger than 2D seismic licence contracts, the percentage of seismic data library sales generated from 2D and 3D data sales fluctuates significantly depending on the number of 3D seismic sale contracts signed during a given period.

GEOGRAPHICAL SALES BREAKDOWN *(%)*
FOR THE YEARS ENDED DECEMBER 31

SALES BREAKDOWN 2D/3D *(%)*
FOR THE YEARS ENDED DECEMBER 31

Participation Survey Revenue

The Company partners with customers on participation surveys; the data becomes the Company's property, including the right to re-license the data. Participating customers are provided a licensed copy.

Participation survey revenue is recognized in the financial statements in proportion to the project's stage of completion. This is assessed using the proportion of the total estimated contract cost that has been incurred for work performed to the period-end.

In 2015 the Company completed field operations for a 3D participation survey, which generated revenues of $3.2 million which were recognized in the first quarter of 2015. In 2014 no participation surveys were conducted.

Amortization of Seismic Data Library

Seismic data library amortization expense was $22.8 million for 2015 compared to $22.5 million in 2014. The year-over-year increase in seismic data library amortization expense is due to the initial 50 percent amortization of $2.0 million recorded by the Company upon completion of the 3D participation survey during the first quarter of 2015 offset by a decrease in the amortization of datasets fully amortized. As stated, there were no surveys completed in 2014.

Amortization of seismic data library is described further under "Critical Accounting Estimates".

Impairment Loss

At December 31, 2015, the Company assessed its cash generating units (CGUs) included in its data library for indicators of impairment, as required under IFRS, and concluded there were such indicators. The principal indicator was the ongoing weakness of commodity prices along with uncertainty over the timing of any improvement. That indicator triggered an impairment test. As a result, the Company completed an impairment test. For the purpose of impairment testing, the recoverable amounts of the Company's CGUs is the greater of its value in use and its fair value less costs to sell. The recoverable amounts of the CGU's were determined based on a value in use calculation. The Company used the following assumptions to calculate the recoverable amount of each CGU:

- The estimated future cash flows for the next five years net of variable and fixed costs;
- The residual value of each CGU estimated to be 20 percent of the original cost for purchased data and 10 percent of the original cost for data shot in a participation survey;
- A pre-tax discount rate of 9.1 percent to calculate the net present value of future cash flows, which is the weighted average cost of capital calculated at December 31, 2015; and
- A combined federal-provincial income tax rate of 27 percent.

Based on these assumptions and the Company's calculations, an impairment loss of $937,000 was recognized in the fourth quarter of 2015. The impairment specifically related to two CGUs, Altares 3D ($323,000) and Simon East 3D ($614,000), and was the result of less activity in the areas due to commodity prices and capital budgets. The total remaining net book value of Altares 3D and Simon East 3D was $826,000 at December 31, 2015.

At December 31, 2014, no indicators of impairment were identified and accordingly, an impairment test was not required.

Salaries, Internal Commissions and Benefits (SCB)

SCB includes salaries, related benefits, incentive compensation and internal commissions. For 2015, SCB was $4.0 million, compared to $4.8 million in 2014.

The factors contributing to the decrease in SCB are lower internal selling commissions and incentive plan expenses due to lower data library sales, as well as reduced salaries and benefits as the number of employees has decreased year-over-year.

Other Selling, General and Administrative Costs (SG&A)

SG&A includes external commissions, occupancy costs, office and general costs, information technology expenses, mapping, data storage expenses, directors' fees and corporate costs, consulting fees and professional fees.

For 2015, SG&A was $2.3 million compared to $2.7 million in 2014.

The reduction was across the board in most areas, with external sales commissions, professional fees, travel and equipment leasing costs realizing some of the biggest savings. All discretionary spending has been analyzed and cost-reduction strategies have been implemented where appropriate.

Net Financing Costs

Net financing costs for 2015 decreased considerably to $494,000 from $875,000 in 2014. This was due to the significant reduction in long-term debt. The Company repaid $5.5 million in 2015 and the balance was nil as of December 31, 2015.

Income Taxes

The deferred income tax reduction for 2015 was $1.0 million, reflecting an effective tax rate of 16.2 percent, compared to a deferred income tax expense of $1.1 million and an effective tax rate of 24.5 percent for 2014.

The federal-provincial corporate income tax rate for 2015 was 26 percent compared to 25 percent for 2014. The effective tax rate in 2015 was lower than the enacted income tax rate, as a result of the change in valuation allowances related to future resource deductions and the change in provincial tax rate. At December 31, 2015, the Company had $8.0 million in non-capital loss carry-forwards available to use in future years.

On June 15, 2015 the Government of Alberta announced that the general corporate income tax rate would increase from 10 percent to 12 percent effective July 1, 2015. The impact of this rate change was recognized in the second quarter of 2015.

SUMMARY FOR THE THREE MONTHS ENDED DECEMBER 31, 2015

Earnings (Loss) Before Income Taxes

For the three months ended December 31, 2015, the Company generated earnings before income taxes of $902,000 ($0.02 per share basic and diluted) compared to $1.1 million ($0.02 per share basic and diluted) for the comparable period of 2014.

Revenue

Total revenue, which includes data library sales and participation survey revenue (nil participation revenue for both 2015 and 2014), for the three months ended December 31, 2015 was $8.8 million compared to $8.4 million for the three months ended December 31, 2014.

Data Library Sales

Data library sales for the quarter ended December 31, 2015 were $8.8 million compared to $8.4 million for the three months ended December 31, 2014.

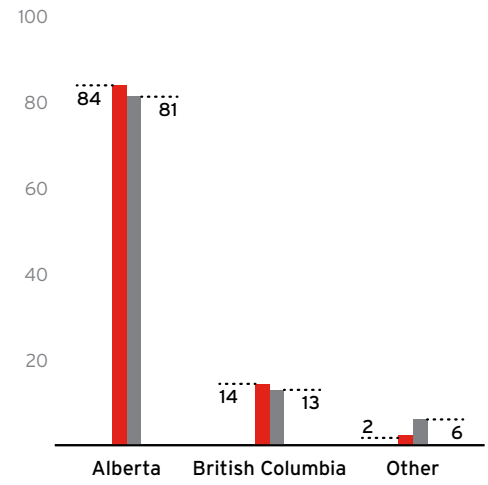

Geographical Sales Breakdown

The Company's customers are generally focusing on liquids-rich natural gas and oil pools found primarily in a broad corridor running from northwest of Calgary, Alberta, along the Foothills of the Rocky Mountains to the British Columbia border, as compared to "dry" natural gas more often found in British Columbia and on Alberta's eastern prairies. In the fourth quarter of 2015, 84 percent of the data library sales were from data located in Alberta.

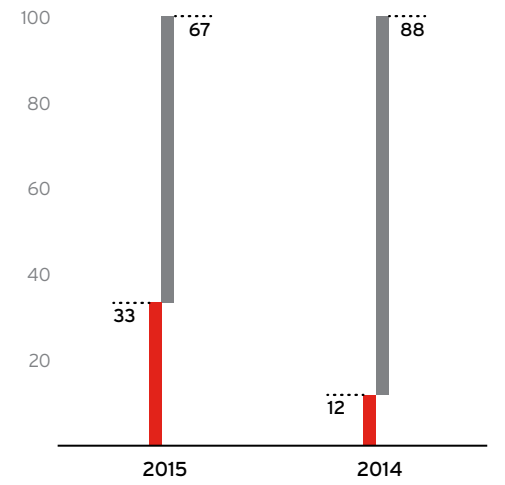

2D/3D Sales Breakdown

As 3D seismic sale contracts are generally larger than 2D seismic sale contracts, the percentage of seismic data library revenues generated from 2D and 3D seismic data fluctuates significantly depending on the number of 3D seismic sale contracts signed during a given period.

GEOGRAPHICAL SALES BREAKDOWN *(%)* FOR THE THREE MONTHS ENDED DECEMBER 31

SALES BREAKDOWN 2D/3D *(%)* FOR THE THREE MONTHS ENDED DECEMBER 31

Participation Survey Revenue

No participation surveys were conducted during the fourth quarter of 2015 and 2014. One participation survey contract was signed in the fourth quarter of 2014, with survey planning and permitting conducted during the fourth quarter of 2014 and field operations completed in the first quarter of 2015.

Amortization of Seismic Data Library

For the three months ended December 31, 2015, seismic data library amortization expense was $5.0 million compared to $5.3 million in the comparable period of 2014. The slight decrease is due to data acquired in previous years becoming fully amortized.

Amortization of the seismic data library is described further under "Critical Accounting Estimates".

Impairment Loss

As discussed above, the Company recognized an impairment loss of $937,000 in the fourth quarter of 2015. No impairment loss was recognized in the same period of 2014.

Salaries, Internal Commissions and Benefits (SCB)

SCB for the three months ended December 31, 2015 was $1.3 million compared to $1.1 million in the comparable period of 2014. The increase is attributable to severance payments made during the fourth quarter of 2015.

Other Selling, General and Administrative Costs (SG&A)

SG&A for the three months ended December 31, 2015 was $536,000 compared to $641,000 for the three months ended December 31, 2014. The decrease was mostly due to lower external commissions as a result of a lower value of data sold by external brokers and operating expense reductions in most other areas.

Net Financing Costs

For the three months ended December 31, 2015, net financing costs decreased to $101,000 from $175,000 for the same period in 2014. Net financing costs decreased due to the elimination of the long-term debt.

Income Taxes

The income tax expense for the three months ended December 31, 2015 was $244,000, reflecting an effective tax rate of 27.1 percent, compared to income tax expense of $266,000 and an effective tax rate of 24.4 percent for the comparable 2014 period. The effective rate in 2015 was higher than the enacted rate of 26 percent due to the impact from the change in the provincial tax rate.

REVIEW OF FINANCIAL POSITION

AS AT DECEMBER 31, 2015

Seismic Data Library and Participation Surveys in Progress

The Company's business model includes growing its seismic data library. Pulse acquires seismic data to add to its library through two main methods. The Company purchases proprietary rights to complementary seismic datasets when the opportunity arises, and it also conducts participation surveys. Pulse partners with customers on participation surveys from which the seismic data collected is added to Pulse's data library to generate future licensing revenue. Pulse retains full ownership of the data, and participating customers are provided with a licensed copy.

The Company completed the seismic data digitization project during the first quarter of 2015. Pulse had been auditing the seismic data remaining on magnetic and analog tape storage and converted it to digital electronic format.

Pulse conducted one participation survey during the 2014-2015 winter season and added 136 square kilometres of high-quality 3D data to its data library in the first quarter. Pulse conducted no participation surveys during the 2013-2014 winter season.

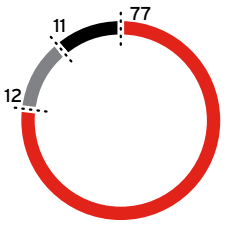

The Company continues to evaluate new opportunities to partner with customers on potential future participation surveys.

On October 16, 2015 the Company acquired, from an oil and gas company, 146 square kilometres of high-quality 3D data located in west central Alberta.

On January 26, 2016 the Company closed an acquisition and added approximately 107,000 net kilometres of 2D seismic data and 58 net square kilometres of 3D seismic data, increasing Pulse's 2D seismic data library by 31.5 percent from approximately 340,000 net kilometres to approximately 447,000 net kilometres.

Included in the other long-term payable is the long-term portion of the cash-settled liability related to the long-term incentive plan.

Share Capital Summary

The Company's authorized share capital consists of an unlimited number of common shares and an unlimited number of preferred shares, issuable in series.

The following table provides details of the Company's outstanding share capital:

	Three months ended December 31,		Year ended December 31,	
	2015	2014	**2015**	2014
Weighted average shares outstanding:				
Basic and diluted	**56,041,324**	57,865,941	**56,628,524**	58,957,072
Shares outstanding at period-end			**55,592,689**	57,247,843
Shares outstanding at March 2, 2016			**55,553,589**	

Diluted Earnings per Share Reconciliation

The Company does not have any dilutive securities.

Long-term Incentive Plan (LTIP)

In 2012 the Company's Board of Directors approved a new LTIP for employees, officers and directors designed to align the Company's long-term incentive compensation with its performance and to increase levels of stock ownership. Participants are granted restricted share units (RSUs) and performance share units (PSUs). LTIP awards are at the discretion of the Board of Directors.

RSUs and PSUs have accompanying dividend-equivalent rights and, therefore, additional RSUs and PSUs are issued to reflect dividends declared on the common shares. The plan's trustee will purchase common shares on the open market for the after-tax number of RSUs and PSUs vested with funds provided by the Company.

On March 31, 2015 one-third of the LTIP awards which were eligible to vest were RSUs and two-thirds were PSUs. Based on the Company's performance in 2014 and the predetermined performance measures, 4 percent or 10,910 of the eligible PSUs vested. RSUs vest automatically based upon time and, consequently, all of the eligible RSUs vested automatically on March 31, 2015.

To satisfy its obligation, in April 2015 the Company provided $350,000 to the plan's trustee to purchase common shares on the open market for the total after-tax number of cash- and equity-settled RSUs and PSUs that vested on March 31, 2015. The related payroll taxes of $211,000 were paid in May 2015 to settle the fully accrued cash-settled portion of the share-based payment liabilities.

At December 31, 2015 there were 344,729 RSUs and 498,746 PSUs outstanding. At March 2, 2016, total RSUs and PSUs outstanding remain unchanged. On March 31, 2016, 122,748 RSUs will vest automatically and, based on the Company's performance in 2015 and the predetermined performance measures, none of the PSUs will vest. In April 2016, the Company will settle its obligation to deliver the common shares by providing funds to the independent LTIP trustee to purchase the shares on the open market.

Retained Earnings (Deficit)

On December 31, 2015 the Company had a deficit of $33.3 million, compared to $22.8 million at December 31, 2014. Contributing to the deficit is the net loss for the year of $5.3 million, the payment of $3.4 million in dividends and the reduction of $1.8 million to retained earnings due to the required accounting treatment of the Company purchasing and cancelling its common shares. The adjustment relates to the difference between the price paid by the Company for the shares purchased and cancelled under the NCIB and the average historical cost of the Company's shares. The average historical cost of the shares purchased and cancelled was recorded as a reduction to share capital.

Dividends

On March 3, 2015, the Company declared a quarterly dividend of $0.02 per common share. The dividend was paid on April 10, 2015 to shareholders of record at the close of business on March 27, 2015.

On May 6, 2015, the Company declared a quarterly dividend of $0.02 per common share. The dividend was paid on June 19, 2015 to shareholders of record at the close of business on June 5, 2015.

On July 29, 2015, the Company declared a quarterly dividend of $0.02 per common share. The dividend was paid on September 18, 2015 to shareholders of record at the close of business on September 4, 2015.

Pulse confirms that all dividends paid to shareholders in 2015 are designated as "eligible dividends" entitling Canadian resident individuals to a higher gross-up and dividend tax credit. For non-resident shareholders, Pulse's dividends are subject to Canadian withholding tax.

With lower period-over-period seismic data library sales and the strong possibility of an extended downturn, in November 2015 Pulse's Board of Directors deemed it financially prudent and in the long-term interests of shareholders to suspend the Company's quarterly dividend of $0.02 per share. Suspension of the dividend will help the Company maintain a strong financial position and be positioned for future potential opportunities.

Deferred Tax Liability

The net deferred income tax liability was $7.7 million at December 31, 2015 compared to $8.6 million at December 31, 2014. The decrease in the deferred income tax liability is mainly due to the current year losses which is offset by the impact of the changes in the provincial tax rate.

The deferred income tax liability consists mainly of taxable temporary differences between the tax base of the seismic data library and the carrying amount on the statement of financial position, offset by non-capital tax losses carried forward.

The Company is aware that the Canada Revenue Agency (CRA) may revise the way it assesses the income tax amortization of certain seismic data library costs. No policy document has been issued by the CRA and, therefore, the Company is not able to estimate the impact this change will have on its income tax calculations, carry-forward balances or consolidated financial statements.

FINANCIAL SUMMARY OF QUARTERLY RESULTS

	2015				2014			
(thousands of dollars, except per share data)	**Q4**	**Q3**	**Q2**	**Q1**	Q4	Q3	Q2	Q1
Data library sales	**8,759**	**4,678**	**6,461**	**1,316**	8,385	14,531	7,321	5,506
Participation survey revenue	–	–	–	**3,220**	–	–	–	–
Total revenue	**8,759**	**4,678**	**6,461**	**4,536**	8,385	14,531	7,321	5,506
Amortization of seismic data library	**4,979**	**5,262**	**5,303,**	**7,292**	5,279	5,554	5,842	5,832
Impairment loss	**937**	**-**	**-**	**-**	–	–	–	–
Net earnings (loss)	**658**	**(1,579)**	**(1,040)**	**(3,347)**	824	5,086	(612)	(1,820)
Per share – basic and diluted	**0.01**	**(0.03)**	**(0.02)**	**(0.06)**	0.01	0.09	(0.01)	(0.03)

The revenue streams generated by Pulse's operations are data library sales and customer pre-funding of participation surveys. Data library sales consist of traditional sales and transaction-based sales, as described below under "Transaction-based vs. Traditional Sales: Six-Year History".

In addition to the revenue fluctuations described in "Seismic Industry Cycles and Seasonality", during the first, second and third quarters of 2014 as well as the second and third quarters of 2015, transaction-based sales contributed to data library sales to varying degrees. Very little transaction-based sales revenue was generated in the other three quarters included in the above table.

Pulse recognizes its participation survey revenue using the percentage-of-completion method. Under this method, participation survey revenue is recognized proportionately with the degree of each project's completion. With the amended standard IFRS 15, Revenue from Contracts with Customers, participation survey revenue can only be recognized in the financial statements when the survey is complete in all respects, meaning the risks and rewards of the final product have been passed on to the customer. Pulse will therefore have to adjust its revenue recognition policy accordingly.

Seismic data library amortization is greater in quarters when participation surveys are completed, as each participation survey is amortized at 50 percent immediately upon delivery of data to the participant, with the remainder amortized equally over seven years. There is a lag between the progressive recognition of participation survey revenue and initial amortization upon survey completion. As amortization is a non-cash expense, the Company continued to generate cash EBITDA and shareholder free cash flow in each quarter.

During the past eight fiscal quarters, the fluctuations in net earnings or loss have largely been a function of revenue, data library amortization and impairment loss. Increases in data library sales have a highly positive impact on earnings, as the operating costs associated with licensing seismic data from the library fluctuate little from period to period.

All financial data included in the above table is presented in Canadian dollars, the Company's functional currency, and was prepared using the latest IFRS.

SELECTED ANNUAL FINANCIAL INFORMATION

	Year ended December 31,		
(thousands of dollars, except per share data)	**2015**	2014	2013
Data library sales	**21,214**	35,743	27,079
Participation surveys	**3,220**	-	13,429
Total revenue	**24,434**	35,743	40,508
Net earnings (loss)	**(5,308)**	3,478	(18,834)
Per share – basic and diluted	**(0.09)**	0.06	(0.31)
Total assets	**54,618**	75,482	98,017
Long-term debt	**-**	5,367	21,850
Total non-current financial liabilities	**7,775**	14,118	29,661
Cash dividends per common share	**0.06**[1]	0.08[2]	0.08[2]

(1) Represents three quarterly dividends of $0.02 per common share.
(2) Represents four quarterly dividends of $0.02 per common share.

Total revenue consists of seismic data library sales and participation survey revenue. Seismic data library sales in 2013 were lower due to lower customer demand and fewer transaction-based sales and even lower in 2015 due to drastic cutbacks in the energy-producing sector's capital spending.

The Company had net earnings in 2014, compared to a net loss in 2015 and 2013, due primarily to higher data library sales during 2014. In addition, in 2013 the Company recorded high levels of non-cash seismic amortization expense upon completion of the 2012-2013 seismic surveys.

See also "Seismic Industry Cycles and Seasonality".

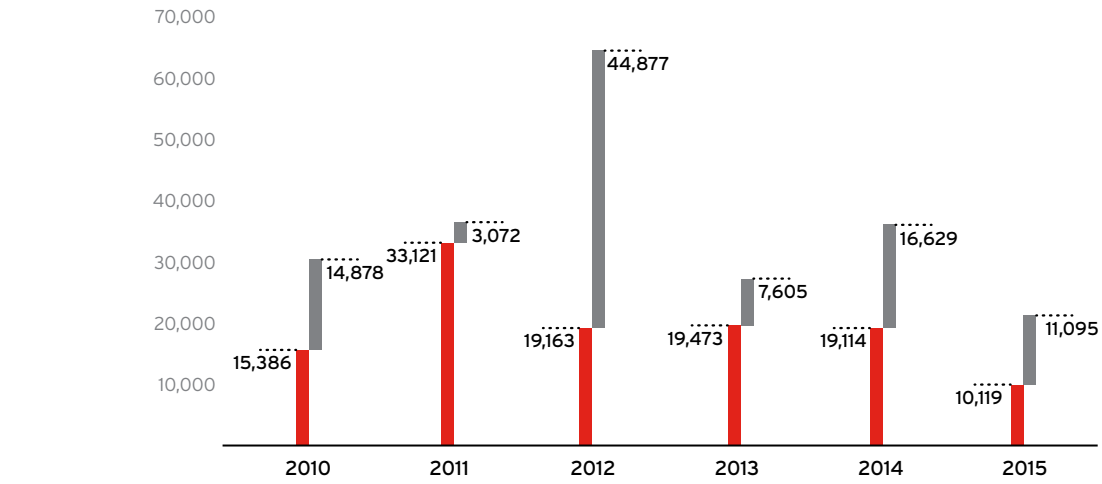

Total assets decreased significantly from 2013 to 2015 due to the amortization of the seismic data library during the years and the impairment loss recorded in 2015.

In the first three quarters of 2015 and all four quarters of 2014 and 2013, the Company paid a quarterly dividend of $0.02 per share.

All financial data included in the table above is presented in Canadian dollars, which is the Company's functional currency, and was prepared in accordance with IFRS.

TRANSACTION-BASED VS. TRADITIONAL SALES: SIX-YEAR HISTORY

SALES BREAKDOWN *(thousands of dollars)*

There are three main types of transaction-based sales. The first is the partnership or joint venture, in which an oil and gas asset holder elects to pool their expertise, capital and/or assets with one or more new participants to explore or develop a play. Under the Company's current standard form licensing agreements, any new technical or operational participant that wishes to view or interpret the seismic data must purchase a data licence from Pulse, generally at a discount (usually pre-defined in the initial licensing agreement). Purely financial partners that do not wish to view or interpret the seismic information are exempt.

The second kind of transaction-based sale is a corporate merger or acquisition. In this case, the seismic data is transferred to the new organization. Under the Company's current standard form licensing agreements, the buyer has 30 days to determine whether they would like to pay a change-of-control fee to keep the data or return the data to Pulse.

The third is the sale of an oil and gas asset or group of assets (as well as partial mineral rights to particular zones below the asset-owner's lands). Under the Company's current standard form licensing agreements, the licence is not transferable upon an asset sale. In this case, no rights to the seismic data transfer to the buyer, and there are no terms of payment in the licence agreement. Should the buyer be interested in Pulse's seismic data, they must license the data from Pulse at the regular price. Following this type of transaction, considerable time may pass until a data licensing sale occurs because the new asset owner may defer development of the particular asset. In addition, the new asset owner may be interested in only portions of the original dataset. The attraction of Pulse's library remains the far lower cost of licensing the data than shooting new seismic over the same area.

The precise terms of individual licence agreements (including those historically used by Pulse and its predecessors and those assumed by Pulse on data acquisitions) can vary greatly. Change-of-control fees and joint venture copy fees may not always be payable, and licence agreements may not always be non-assignable.

CONTRACTUAL OBLIGATIONS

Pulse's known contractual obligations at December 31, 2015 included a long-term syndicated debt facility led by Toronto Dominion Bank, operating leases for certain office equipment and office space, and minimum payments under seismic data services contracts. The following table reflects the Company's anticipated payment of contractual obligations (assuming that the syndicated revolving credit facility is not renewed in February 2019):

		Payments due by period			
Contractual Obligations (thousands of dollars)	Total	Less than 1 year	1 - 3 Years	4 - 5 Years	After 5 Years
Long-term debt	-	-	-	-	-
Interest on long-term debt	-	-	-	-	-
Operating line of credit	222	222	-	-	-
Operating leases	758	520	238	-	-
Seismic data services contracts	270	120	150	-	-
Accounts payable and accrued liabilities	885	809	76	-	-
Total contractual obligations	2,135	1,671	464	-	-

Obligations in the category of seismic data services contracts include geophysical services such as reprocessing and data storage.

The Company is subject to financial covenants relating to the long-term debt. Failure to meet their terms could constitute an event of default as defined in the debt agreement, possibly triggering a demand for accelerated repayment. Having no long-term debt and immaterial short-term borrowing and interest costs, the Company was in compliance with all of the financial covenants at December 31, 2015. See "Liquidity, Capital Resources and Capital Requirements" for further information.

In addition, as part of the acquisition of the Foothills 2D dataset in November 2006, Pulse agreed to pay additional consideration if future seismic data sales from the acquired assets exceeded $10.0 million per year, up to a maximum of $3.75 million. Sales from the Foothills 2D dataset have not exceeded $10.0 million in any year since acquisition. No amounts were included for this obligation in the table above because they cannot be predicted.

LIQUIDITY, CAPITAL RESOURCES AND CAPITAL REQUIREMENTS

At December 31, 2015 Pulse had working capital of $5.0 million and a working capital ratio of 4.44:1. There is no current portion of long-term debt under the current credit facility. Given the flexibility of drawing and paying down debt, without penalty, on the revolving credit facility described below, and in order to reduce net financing costs, the Company maintains a minimum cash balance as required for operations.

The Company utilized cash on hand and cash provided by operating activities during 2015 for the following major cash outlays:

- Investing activities of $4.9 million, consisting mostly of additions to the seismic data library;
- Purchase and cancellation of 1,625,400 common shares through its NCIB, for a total of $4.1 million (at an average price of $2.50 per common share including commissions);
- Dividend payments of $3.4 million; and
- Debt repayment of $5.5 million.

On February 15, 2013, the Company executed a $50.0 million three-year extendible revolving credit facility with a syndicate of two banks.

On an annual basis, the Company has the option to extend the maturity for one additional year with the lenders' approval. On January 18, 2016, the Company extended the maturity date to February 13, 2019.

At its own discretion, the Company also reduced the facility's available borrowing amount to $30.0 million from $50.0 million. Up to $5.0 million of the revolving facility remains available as an operating line of credit.

Highlights of the credit facility:

- Four-tier margin structure based on the Company's total debt to adjusted EBITDA ratio as described below;
- Accordion feature allowing the Company to increase the facility's size up to an additional $40.0 million, subject to the lenders' consent;
- No regularly scheduled principal payments, with voluntary prepayments permitted in whole or part at any time, without premium or penalty; and
- Three-year term, with an extension of up to one year available on February 15 of every year with the approval of the lenders. If the extension is not granted, any outstanding amounts will be payable on the then-current applicable maturity date.

At December 31, 2015 the Company had a balance of $222,000 (nil as at March 2, 2016) on the operating line of credit and $49.8 million ($30 million as at March 2, 2016) available for future draws.

The credit facility is secured by a charge on all of the assets of the Company and its material subsidiaries. The credit facility also includes the following two financial covenants:

- Total debt to adjusted EBITDA not to exceed a ratio of 2.50:1. Total debt is equal to the sum of, without limitation, debts and liabilities for borrowed money (including the negative mark-to-market exposure of hedging obligations), bankers' acceptances, letters of credit, and letters of guarantee, capital leases and contingent guarantees.

  Adjusted EBITDA is to be calculated on a trailing twelve-month basis and is defined as earnings or loss before interest, income taxes, depreciation and amortization, plus extraordinary losses, non-cash losses and expense charges, and any other unusual or non-recurring cash charges, expenses or losses consented to by the lenders, less participation survey revenue, extraordinary gains and non-cash gains and income. Adjusted EBITDA is to be adjusted for acquisitions or dispositions to reflect such acquisition or disposition as if it occurred on the first day of such calculation period.
- Interest coverage ratio is to be at least 3:1 at all times. The interest coverage ratio is equal to adjusted EBITDA divided by interest expense.

The covenants at December 31, 2015 were calculated as follows (financial figures are stated in thousands of dollars):

TOTAL DEBT TO ADJUSTED EBITDA RATIO:
(thousands of dollars, except ratios)

Total debt	222
Divided by:	
Adjusted EBITDA	15,121
Total debt to adjusted EBITDA ratio (not to exceed 2.50:1)	0.01:1

Total debt was calculated as follows:

Long-term debt	-
Add: operating line of credit	222
Add: deferred financing charges	-
Total debt	222

Adjusted EBITDA was calculated as follows:

Cash EBITDA for the twelve months ended December 31, 2015	$15,121
Adjustment for acquisitions or dispositions	-
Adjusted EBITDA	$15,121

INTEREST COVERAGE RATIO (ICR)
(thousands of dollars, except ratios)

Adjusted EBITDA	15,121
Divided by:	
Interest expense	297
Interest coverage ratio (to be at least 3:1)	51:1

Interest expense was calculated as follows:

Interest paid for the twelve months ended December 31, 2015	297
Adjustments	-
Interest expense	297

The Company was in compliance with the credit facility's covenants at December 31, 2015.

At December 31, 2015, the floating interest rate on the syndicated revolving credit facility was 3.20 percent, which is based on a combination of the bankers' acceptance rate and an applicable margin tied to the Company's total debt to adjusted EBITDA ratio. The Company pays a standby fee based on the daily undrawn balance of the credit facility and its total debt to adjusted EBITDA ratio. The interest and standby fee rates are adjusted two business days after the covenant's calculation for the previous fiscal quarter is received and approved by the lenders. On December 31, 2015 the applicable margin and standby fee were set at the lowest rates available under the facility.

The applicable margin and standby fee rate are determined as follows:

TOTAL DEBT TO ADJUSTED EBITDA RATIO

	Applicable Margin for Canadian Prime Rate Loans	Applicable Margin for Bankers' Acceptances	Standby Fee Rate
Less than or equal to 1:1	0.50%	1.75%	0.35000%
Greater than 1:1 but less than or equal to 1.5:1	0.75%	2.00%	0.45000%
Greater than 1.5:1 but less than or equal to 2:1	1.00%	2.25%	0.50625%
Greater than 2:1 but less than or equal to 2.5:1	1.50%	2.75%	0.61875%

Toronto Stock Exchange (TSX) rules determine the number of shares the Company is permitted to purchase through its NCIB. From December 13, 2014 to December 14, 2015, the maximum number was 4,282,902 common shares, representing 10 percent of the public float of 42,829,022 common shares as at December 13, 2014. From January 1, 2015 to December 31, 2015, the Company purchased 1,625,400 common shares under the NCIB. Purchases were made on the open market through the TSX or alternative trading platforms at the market price of such shares. All shares purchased under the NCIB were cancelled.

On December 21, 2015, the Company announced the renewal of its NCIB. The Company may purchase, for cancellation, up to a maximum of 3,509,326 common shares, equal to 10 percent of the public float of 35,093,268 common shares as at December 15, 2015. The Company is limited under the NCIB to purchasing up to 5,134 common shares in any one day, subject to the block purchase exemption under TSX rules. The NCIB will continue until December 20, 2016. Purchases will be made on the open market through the TSX or alternative trading platforms at the market price of such shares. All shares purchased under the NCIB will be cancelled.

Funding for Pulse's future capital expenditures will generally depend on the level of future data library sales. Pulse's management believes that the Company's capital resources will be sufficient to finance future operations and carry out the necessary capital expenditures through 2016. The Company anticipates that future capital expenditures will be financed through customer pre-funding, cash on hand, available credit facilities, and funds from operations. The Company has a $30.0 million revolving credit facility for future draws in 2016, and an accordion feature allowing Pulse to increase the facility's size by up to $40.0 million, subject to the lenders' consent. If deemed appropriate by management and the Board of Directors, Pulse can also issue common or preferred shares.

Pulse requires flexibility in managing its capital structure to take advantage of opportunities in raising additional capital where opportunities for seismic data acquisitions or participation surveys arise. Historically, the Company has used a combination of debt and equity to finance various growth initiatives, and it continues to rely on key internal measures such as the long-term debt to TTM cash EBITDA ratio and long-term debt to equity ratio, to structure and forecast its capital requirements. Long-term debt is defined as long-term debt, excluding deferred financing costs. Pulse's management considers the current capital structure appropriate.

The long-term debt to cash EBITDA ratio for the years ended December 31, 2015 and 2014 is calculated using the long-term debt at year-end, divided by TTM cash EBITDA:

LONG-TERM DEBT TO TTM CASH EBITDA RATIO

	As at December 31,	As at December 31,
(thousands of dollars, except ratios)	**2015**	2014
Long-term debt	**-**	5,500
Divided by: TTM cash EBITDA	**15,121**	28,615
Long-term debt to TTM cash EBITDA ratio	**0.00:1**	0.19:1

The decrease in the long-term debt to TTM cash EBITDA ratio was attributable to the decrease in the long-term debt following repayments made during the year and a balance of nil as of December 31, 2015.

Pulse uses debt strategically, to acquire high-quality seismic datasets that meet economic and technical criteria.

The long-term debt to equity ratio is calculated using the long-term debt balance divided by total equity. At December 31, 2015 and 2014 the long-term debt-to-equity ratios were as follows:

	December 31,	December 31,
(thousands of dollars, except ratios)	**2015**	2014
Long-term debt	**-**	5,500
Divided by: equity	**45,389**	58,401
Long-term debt to equity ratio	**0.00:1**	0.09:1

Repayment of the long-term debt balance during the year resulted in the change to the long-term debt to equity ratio year over year.

Long-term debt was calculated as follows:

	As at December 31,	As at December 31,
(thousands of dollars)	**2015**	2014
Long-term debt per financial position	**-**	5,367
Add: deferred financing costs	**-**	133
Long-term debt	**-**	5,500

This discussion on liquidity, capital resources and capital requirements contains forward-looking information; users of this information are cautioned that actual results may vary and are encouraged to review the discussions of risk factors and forward-looking statements below.

NON-CAPITAL RESOURCES

The Company's main non-capital resource is its key management and staff. The Company has an experienced team with extensive knowledge about the seismic industry. Pulse's management understands industry cycles and how to manage the business in the downturn and recovery phases. Pulse has built strong operations, sales, financial and information technology departments. Key management and staff are eligible to participate in the short-term and long-term incentive plans, which are tied to the Company's shareholder free cash flow per share.

NON-GAAP FINANCIAL MEASURES AND RECONCILIATIONS

This MD&A and the Company's continuous disclosure documents provide discussion and analysis of cash EBITDA and shareholder free cash flow. IFRS do not include standard definitions for these measures and, therefore, they may not be comparable to similar measures used and disclosed by other companies. As IFRS have been incorporated into Canadian GAAP, these non-IFRS measures are also non-GAAP measures. The Company has included these non-GAAP financial measures because management, investors, analysts and others use them to evaluate the Company's financial performance.

Cash EBITDA and shareholder free cash flow are not calculations based on IFRS and should not be considered in isolation or as a substitute for IFRS performance measures, nor should they be used as an exclusive measure of cash flow, because they do not consider working capital changes, capital expenditures, long-term debt repayments and other sources and uses of cash which are disclosed in the consolidated audited and interim statements of cash flows.

CASH EBITDA AND SHAREHOLDER FREE CASH FLOW

Cash EBITDA represents the capital available to invest in growing the Company's 2D and 3D seismic data library, to pay interest and principal on its long-term debt, to purchase its common shares, to pay taxes and to pay dividends if applicable.

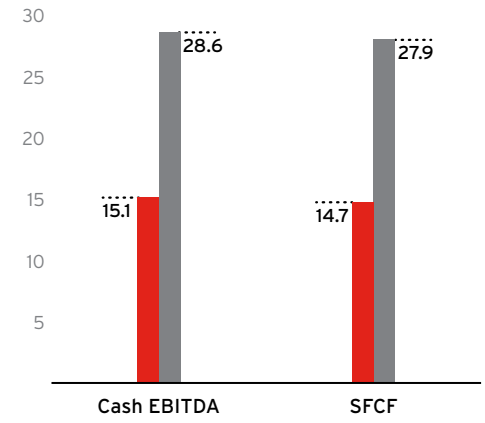

Cash EBITDA is calculated as earnings or loss from operations before interest, taxes, depreciation and amortization less participation survey revenue, plus non-cash and non-recurring expenses. Cash EBITDA excludes participation survey revenue as this revenue is directly used to fund specific participation surveys and is unavailable for discretionary expenditures. The Company believes cash EBITDA helps investors compare Pulse's results on a consistent basis without regard to participation survey revenue and non-cash items, such as depreciation and amortization, which can vary significantly depending on accounting methods or non-operating factors such as historical cost.

Shareholder free cash flow further refines the calculation of capital available to invest in growing the Company's 2D and 3D seismic data library, to repay debt, to purchase its common shares and to pay dividends if applicable, by deducting non-discretionary expenditures from cash EBITDA. Non-discretionary expenditures are defined as debt financing costs (net of deferred financing expenses amortized in the current period) and current tax provisions.

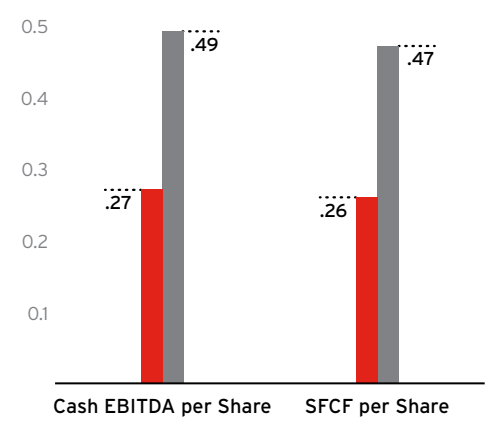

A reconciliation of net earnings (loss) to EBITDA, cash EBITDA and shareholder free cash flow follows:

	Three months ended December 31,		Year ended December 31,

FINANCIAL INSTRUMENTS

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity. Financial instruments are recognized on the statement of financial position when the Company becomes a party to the instrument's contractual obligations. The Company's financial assets include cash and cash equivalents, trade and other receivables. Its financial liabilities mainly comprise accounts payable and long-term debt.

FAIR VALUE

The fair values of cash and cash equivalents, accounts receivable and accounts payable approximate their carrying amount largely due to the short-term maturities of these instruments. The fair value of the long-term debt approximates the carrying value because interest charges under the bank loan are based on current Canadian bankers' acceptance rates and margins.

CREDIT RISK

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations, and arises principally from the Company's accounts receivable.

The Company is exposed to customer credit risk in connection with data sales and participation surveys with its customers. The Company's exposure to credit risk is influenced mainly by the individual characteristics of each customer. The makeup of the Company's customer base, including the default risk of the industry in which customers operate, has an influence on credit risk. As the Company operates exclusively in the oil and natural gas industry, essentially all of its trade receivables relate to customers from this industry.

The effective monitoring and control of credit risk is a core competency of the Company. Each new customer is analyzed individually for creditworthiness before payment and delivery terms and conditions are offered. The Company's review includes credit reference checks and credit limits for all customers as well as other monitoring activities. Accounts receivable aging is reviewed regularly. Certain customers have signed agreements with the Company that provide for extended payment terms.

The Company's credit risk increases on these types of arrangements due to the length of time before payments are received. The risk is mitigated by attempting to limit these types of arrangements to major oil and natural gas companies which have long operating histories and adequate resources to fulfill their commitments.

The Company has been doing business with the majority of its customers for many years, with insignificant credit losses to date. The Company does not require collateral in respect of trade receivables.

The Company's customers are in the oil and natural gas industry, with the majority located in Alberta. At December 31, 2015, 68 percent of total accounts receivable were due from two customers. These amounts were collected subsequent to year-end, with the exception of $262,500 due from one customer with extended payment terms.

The Company recorded no bad debt expense in 2015. At December 31, 2015, none of the Company's accounts receivable were more than 60 days past due.

Cash and cash equivalents are held with a large, well-known Canadian chartered bank. The carrying amount of financial assets represents the maximum credit exposure. The Company considers the risk on cash and cash equivalents to be limited.

INTEREST RATE RISK

Interest rate risk is the risk that changes in interest rates will affect the Company's income or the value of its holdings of financial instruments. The Company's interest rate risk exposure is mainly related to long-term debt. The Company is exposed to interest rate fluctuations on the cost of its variable-rate debt. An increase of 100 basis points in the lender's base-rate would have decreased earnings before income taxes by approximately $33,000 for the year ended December 31, 2015. The Company did not have any fixed-rate interest-bearing obligations at December 31, 2015.

LIQUIDITY RISK

Liquidity risk is the risk that the Company will encounter difficulty in meeting the obligations associated with its financial liabilities that are settled in cash or other financial assets, i.e., repaying its debt and paying its suppliers. The Company's approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under normal and stressed conditions, without incurring unacceptable losses or risking damage to its reputation. Beyond effective working capital and cash management, the Company has a revolving-term credit facility, which offers flexibility in drawing and paying down debt, without penalty, of which $49.8 million remained available at December 31, 2015 ($30 million as at March 2, 2016) for future draws, as described in "Liquidity, Capital Resources and Capital Requirements".

The Company regularly monitors cash flow. In addition, it monitors funding options available in the capital markets, as well as trends in the availability and costs of such funding, with a view to maintaining financial flexibility and limiting repayment risks. The Company does not believe that it will encounter difficulty in meeting its obligations associated with financial liabilities.

COMMODITY PRICE RISK

The Company is not directly exposed to commodity price risk as it does not have any contracts directly based on commodity prices. A change in commodity prices, specifically oil and natural gas prices, could have a material impact on the Company's customers' cash flows and could therefore affect seismic data library sales and participation surveys. Commodity prices are affected by many factors, including supply and demand. The Company has not entered into any commodity price risk contracts. Given that this is an indirect influence, the financial impact on the Company of changing oil and natural gas prices is not reasonably determinable.

NEW IFRS STANDARDS

A number of new standards, amendments and interpretations have been issued by the International Accounting Standards Board but are not yet effective for the year ended December 31, 2015. They were not applied in preparing the consolidated financial statements. None is expected to have a significant effect on the consolidated financial statements, except for:

- IFRS 15, *Revenue from Contracts with Customers*, which provides guidance on revenue recognition and relevant disclosures. The standard provides a single, principles-based five-step model to be applied to all contracts with customers. IFRS 15 was issued in May 2014 and applies to annual reporting periods beginning on or after January 1, 2018, with early adoption permitted. The new standard will enhance revenue disclosure.

After review, Pulse's management concluded that IFRS 15 would affect the Company's policy for recognizing participation survey revenue. Pulse currently recognizes revenue on participation surveys based on percentage of completion. With the amended standard, participation survey revenue can only be recognized in the financial statements when the survey is complete in all respects, meaning the risks and rewards of the final product have been passed on to the customer. Pulse will therefore have to adjust its revenue recognition policy accordingly and may choose to adopt the standard before January 2018. With this adjustment, the lag between the progressive recognition of participation survey revenue and initial amortization upon survey completion will disappear.

- IFRS 16, *Leases*. IFRS 16 was issued in January 2016, significantly revising the way in which companies account for leases by requiring almost all leases to be included on the balance sheet of lessees. The standard provides a single lessee accounting model, requiring lessees to recognize assets and liabilities for all leases unless the lease term is 12 months or less or the underlying asset has a low value. IFRS 16 is effective for annual periods beginning on or after January 1, 2019, with early adoption permitted for companies that also apply IFRS 15, *Revenue from Contracts with Customers*. The Company continues to evaluate the potential impact of IFRS 16 on the financial statements and, therefore, the impact is not known at this time.

CRITICAL ACCOUNTING ESTIMATES

The preparation of financial statements in conformity with IFRS requires management to make estimates and assumptions. Management's estimates and assumptions affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, as well as the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. The Company's critical accounting estimates are described below and are discussed annually with the Audit Committee of the Company's Board of Directors.

SEISMIC DATA LIBRARY

Amortization of the seismic data library, the Company's largest asset, with a net book value of $47.6 million at December 31, 2015 (December 31, 2014 – $66.5 million), is conducted by reference to the estimated timing of the economic return of the seismic library. Amortization of seismic library data is based on management's estimates of expected future sales, expected useful lives, market developments and experience. These estimates may change due to changes in market conditions, potential prospects, exploration licence periods, exploration and development in certain areas, government regulations and general economic conditions. Because of the inherent difficulty in estimating market developments and future sales, the amortization rates might not accurately reflect the systematic allocation of the seismic data library over its useful life.

Additions to the seismic library arise in two ways: (i) participation surveys, and (ii) the purchase of existing seismic data. Costs associated with participation surveys completed during the year are amortized at 50 percent immediately on the delivery of the data to the participants, with the balance amortized on a straight-line basis over the seven-year period commencing at the end of the period of exclusivity, if any. The costs of purchased data are amortized on a straight-line basis over seven years.

The assumptions behind the 50 percent immediate amortization on delivery are the following. The Company's historical average and target survey prefunding percentage is 70 percent of the cost of the seismic data shoot. Also, based on historical numbers, within seven years the Company usually recovers 70 percent of the total cost of the survey by selling the data acquired by the survey. After seven years the data sales are generally expected to decline.

Based on these numbers, the total return on investment (ROI) for a participation survey historically is 140 percent of cost. The 70 percent prefunding divided by the expected ROI of 140 percent equals 50 percent. This 50 percent initial amortization represents that approximately 50 percent of the expected return has been realized with the initial licensing of the data during the shoot.

The costs of purchased data are amortized on a straight-line basis over seven years.

The carrying amounts of the seismic data library are reviewed at each reporting date by management to determine whether there is any indication of impairment. If so, the asset's recoverable amount is estimated and impairment recorded, if any. The Company uses judgement in determining its cash-generating units for purposes of impairment testing. The determination of these cash-generating units was based on management's judgements in regards to the smallest identifiable group of seismic data that generates cash inflows largely independent of the cash inflows from other data. Estimating future cash flows and residual values for purposes of impairment testing requires management to make judgments regarding long-term forecasts of future revenues and costs and future residual values related to the seismic data library. These forecasts are uncertain as they require assumptions about demand for seismic data and future market conditions. Significant and unanticipated changes in these assumptions could require a provision for impairment in a future period.

As discussed above, the Company recognized an impairment loss of $937,000 in the fourth quarter of 2015. No impairment loss was recognized in the same period of 2014.

Estimates of useful lives and the pattern of expected future economic benefits are based on historical experience and internal business plans. Expected future economic benefits are determined based on historical revenue patterns. Future deviations from the Company's historical returns could materially affect the current amortization methodology.

PERFORMANCE SHARE UNITS

In determining the amount of share-based compensation related to PSUs, management makes estimates about future results and vesting criteria. It is reasonably possible that future outcomes could be different from the estimates and could require a material adjustment to the share-based compensation expense recorded in future periods. The impact of any change in the number of PSUs expected to vest is recognized in the period the estimate is revised.

DEFERRED TAX ASSETS

Significant management judgement is required to determine the amount of deferred tax assets that can be recognized, based on the likely timing and level of future taxable income. The estimates of projected future taxable income are based on a variety of factors and assumptions, many of which are subjective and beyond the Company's control. Accordingly, these estimates could differ significantly from year to year, and the Company might end up realizing more or less of the deferred tax assets than recognized in the consolidated financial statements.

DISCLOSURE CONTROLS AND PROCEDURES (DC&P) AND INTERNAL CONTROLS OVER FINANCIAL REPORTING (ICFR)

DC&P

Management has evaluated the effectiveness of its DC&P (as defined in National Instrument 52-109), under the supervision of its CEO and CFO, at December 31, 2015. Based on this evaluation, the CEO and CFO have concluded that the DC&P were effective at December 31, 2015.

ICFR

Management under the supervision of its CEO and CFO evaluated the effectiveness of ICFR (as defined in National Instrument 52-109) at December 31, 2015, in accordance with Internal Control – Integrated Framework, issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) and the Control Objectives for Information and Related Technology Framework (COBIT). Based on this evaluation, Pulse's CEO and CFO have concluded that the ICFR were effective at December 31, 2015.

No changes were made to ICFR during the period beginning on October 1, 2015 and ending on December 31, 2015 that have materially affected, or are reasonably likely to materially affect, Pulse's ICFR.

In May 2013, the COSO released an updated Internal Control – Integrated Framework which it required companies to use for officers' certificates filed after December 15, 2014. Pulse early-adopted the new framework in 2013, without any significant impact to the internal controls testing or documentation.

RISK FACTORS

OIL AND NATURAL GAS PRICES

Pulse's customers are oil and natural gas exploration and development companies. Oil and natural gas prices are volatile and directly affect the capital budgets, drilling activity, and access to capital and credit by Pulse's customers, which in turn directly affect the demand by such customers for seismic data. In response to the collapse of oil prices, Pulse's customers have dramatically slashed their 2016 capital budgets.

SEISMIC INDUSTRY CYCLES AND SEASONALITY

Revenue fluctuations are a normal part of the seismic data library business, and data library sales can vary significantly from quarter to quarter. Data library sales can occur at any time during any quarter. This is due to the nearly continual changes in general oil and natural gas industry conditions, increased demand for seismic data covering a specific area or play, timing of public offerings of petroleum and natural gas rights (land sales), as well as merger-and-acquisition, joint venture and asset disposition activity by Pulse's clients.

Participation survey revenue also varies significantly from quarter to quarter. The majority of new 3D seismic data is acquired under frozen ground from November to March. Summer seismic programs can only be completed in certain areas that have drier ground conditions and can be easily accessed without environmental harm. In addition, the size and pre-funding levels of individual participation surveys can vary significantly.

DEMAND FOR SEISMIC DATA AND PARTICIPATION SURVEYS

Pulse's ability to generate revenue, cash EBITDA, shareholder free cash flow and earnings and to grow its seismic data library depends on the demand for seismic data and participation surveys from its oil and natural gas customers over geological plays and areas that such customers focus on in a given period. Activity in such plays and areas depends on commodity prices, customers' budgets, geological understanding and advances in drilling technology, all of which are beyond Pulse's control. The Company endeavours to grow its high-quality proprietary data library, to expand and maintain its customer base, and to provide good customer service with short delivery time and broad data coverage in prospective locations.

PRICING OF DATA LIBRARY LICENCE SALES

Pulse's ability to generate revenue, cash EBITDA, shareholder free cash flow and earnings and to grow its data library depends on its ability to market data library licences and on the pricing of these licences. Pulse prices its data competitively while endeavouring to maintain the integrity of the database.

RELICENSING (CHANGE-OF-CONTROL) FEES AND PARTNER COPY SALES

Data library licences are generally not transferable. Under Pulse's current standard-form licence agreement, upon a change of control of the licensee in a merger or acquisition transaction, a change-of-control fee is generally payable. Under Pulse's current standard-form licence agreement, a licensee generally may not give the licensed data to a joint interest partner in the oil and natural gas lands. If the joint interest partner wishes to view or interpret the seismic data, it must purchase an additional copy directly from Pulse.

The precise terms of individual licence agreements (including those historically used by Pulse and its predecessors and those assumed by Pulse on data acquisitions) can vary greatly. Relicensing (change-of-control) fees may not always be payable and joint interest partners may not always wish to or have to purchase an additional licensed copy.

In addition, merger-and-acquisition and joint venture activity in the oil and gas industry is unpredictable.

PRE-FUNDING OF PARTICIPATION SURVEYS AND SUBSEQUENT DATA LIBRARY LICENCE SALES

Pulse's rate of pre-funding for participation surveys varies, with the actual target percentage funding of each particular survey determined by Pulse ahead of time depending on Pulse's risk analysis of such survey and competitive conditions in the area. Factors affecting these individual survey program targets include: circumstances where Pulse believes that there is a high probability of additional participants joining the survey before completion or additional licence sales after completion of the survey, or where a survey is located in a strategic location, or where competitive conditions require a lower level of pre-funding.

Pulse's ability to generate revenue, cash EBITDA, shareholder free cash flow and earnings and to grow the data library depends on its ability to obtain targeted levels of pre-funding for participation surveys, and to make subsequent seismic data library sales from such surveys.

COMPLETION OF PARTICIPATION SURVEYS

Pulse obtains presales of licences for participation surveys based on its budgeted costs and program schedule. Pulse's ability to generate revenues, cash EBITDA, shareholder free cash flow and earnings depends on its ability to complete committed participation surveys on time and within budget. Cost overruns are generally absorbed by Pulse and effectively reduce the percentage of pre-funding. The Company endeavours to manage this risk through the use of a dedicated survey project team with extensive experience.

ENVIRONMENTAL, HEALTH AND SAFETY RISKS

Pulse's field operations for participation surveys are subject to laws and regulations relating to environmental protection and occupational health and safety. A breach of these laws and regulations could result in material fines and civil lawsuits, as well as reputational damage. Pulse endeavours to reduce this risk by employing seasoned specialists who provide comprehensive training, field supervision and monitoring, and by working with a network of trusted sub-contractors who operate to high standards. In March 2015, Pulse received the renewal of its three-year Certificate of Recognition (COR) issued by Enform and the Government of Alberta, with a score of 96 percent, higher than in its initial 2009 certification and in its September 2012 re-certification. The COR program recognizes employers in the Alberta oil and natural gas industry having a health and safety management system that meets provincial standards.

EFFECT OF SEASONALITY AND WEATHER CONDITIONS ON PARTICIPATION SURVEYS

Seismic surveys are often completed in the winter season when frozen ground permits the movement and operation of heavy equipment in the northern areas of Alberta and British Columbia. If an unseasonably late or warm winter delays or prevents sufficient freezing, or if an early spring results in an early thaw, Pulse may not be able to complete its winter seismic survey programs on time and within budget.

Seismic surveys may also be completed in the summer months under drier conditions. If there is unseasonably cold or wet weather, Pulse may not be able to complete its summer seismic survey programs on time and within budget.

Pulse endeavors to manage this risk by scheduling sufficient time for each participation survey to allow flexibility to complete the survey on time and within budget.

LAWS AND REGULATIONS

Pulse's oil and natural gas customers are subject to federal and provincial laws and regulations, including those pertaining to taxation, royalty rates, environmental protection and safety. Compliance with these laws and regulations, and changes in these laws and regulations, may affect oil and natural gas exploration and development activities and the demand for seismic data licenses and participation surveys by such customers.

Pulse's field operations for participation surveys are subject to federal and provincial laws and regulations, including laws and regulations relating to safety and environmental protection. Pulse and its contractors are required to invest financial and managerial resources to comply with such laws and related permit requirements in their operations. Although such expenditures historically have not been material to Pulse, such laws and regulations are subject to change and, accordingly, it is impossible for the Company to predict the cost or impact of such laws and regulations on its future operations.

The Company is aware that the Canada Revenue Agency (CRA) may revise the way it assesses the income tax amortization of certain seismic data library costs. No policy document has been issued by the CRA and, therefore, the Company is not able to estimate the impact this change will have on its income tax calculations, carry-forward balances or consolidated financial statements.

COMPETITION

The western Canadian geophysical services industry in which Pulse operates is highly competitive and price- sensitive. Pulse competes with companies which may have greater financial resources, and certain of which are large international geophysical services companies that offer a wider array of geophysical services to their clients than Pulse. Pulse also competes with other companies that acquire, market and license seismic data, that maintain their own seismic data libraries, and that compete against Pulse in shooting participation surveys and licensing seismic data to their customers. Pulse also competes against oil and natural gas companies that may choose to license their own proprietary seismic data to customers. To mitigate this risk, Pulse's management continuously evaluates its marketing plan and marketing efforts. In addition, the Company owns high-quality data with extensive coverage in the WCSB. In general, there is little overlap between 3D databases, due to the high costs of overshooting existing 3D seismic surveys, and there is little direct competition between specific 3D datasets. Seismic data library companies and individual oil and gas companies may, however, elect to overshoot an existing 3D dataset if it is not of the desired quality or specifications.

DEPENDENCE ON QUALIFIED SEISMIC CONTRACTORS

Pulse depends on qualified seismic acquisition contractors to complete its seismic surveys on time and within budget. Pulse endeavors to enter into master service agreements and to establish relationships with its key contractors.

KEY MANAGEMENT, OPERATIONS AND MARKETING PERSONNEL

Pulse depends on certain key management, operations and marketing personnel for the success of its seismic acquisition, marketing and licensing business. Pulse endeavors to obtain written employment agreements with such personnel containing confidentiality and non-competition provisions where appropriate. Personnel risk is further mitigated by providing compensation packages designed to support Pulse's business philosophy and which are both market-driven and performance-based. This includes short- and long-term incentive programs which are directly tied to shareholder free cash flow per share, which the Board of Directors believes is the key financial metric for the long-term increase in the value of Pulse. Pulse also has a succession plan to provide adequate training and education to its future leaders, which is reviewed annually by the Board of Directors.

LOSS OF SEISMIC DATA

Pulse's largest asset and source of revenue is the seismic data library. The safety and security of the data library asset is imperative to the Company's success. The physical data is stored in a secure location managed by a data storage company. All physical data has been digitized and back-up digital copies are kept in separate secure locations.

CYBERSECURITY THREATS

Pulse faces cybersecurity threats to gain unauthorized access to its confidential seismic data bases and systems. Cybersecurity attacks are becoming more sophisticated and could lead to unauthorized access and release of confidential seismic data and disruption in operating systems.

PROTECTION OF INTELLECTUAL PROPERTY

Pulse relies on a combination of licence agreements, copyright and other intellectual property rights to protect its ownership rights and copyright in its seismic data. Despite Pulse's efforts to enforce its licence agreements and copyright, there is a risk that unauthorized parties might improperly obtain, copy or use Pulse's seismic data without Pulse's knowledge or permission. The cost of litigation necessary to enforce Pulse's ownership rights and copyright could be prohibitive.

NEW PRODUCTS

Seismic data is used by oil and natural gas exploration and development companies to identify portions of geological formations that have the potential to hold hydrocarbons. There are currently no other products that compete directly against seismic data for such purposes. Should a new product or method be introduced that was technically and/or economically comparable or superior to seismic data, Pulse's data library sales and/or the pricing thereof could be adversely affected.

ADDITIONAL INFORMATION

You may find additional information relating to Pulse, including the Company's Annual Information Form, on SEDAR at www.sedar.com.

FORWARD-LOOKING INFORMATION

This document contains information that constitutes "forward-looking information" or "forward-looking statements" (collectively, "forward-looking information") within the meaning of applicable securities legislation.

The Outlook and the Liquidity, Capital Resources and Capital Requirements sections contain forward-looking information which includes, among other things, statements regarding:

- Pulse's short-term outlook is more cautious than one year ago;
- The Company's first quarter seismic data library sales are likely to be weaker than last year's very low level, and traditional sales for the year could well be lower than in 2015;
- More M&A activity will create favorable conditions for additional transaction-based sales;
- The unpredictability of transaction-based sales means that Pulse will continue to lack visibility as to its 2016 revenues;
- Pulse's long-term goal is to become Western Canada's largest licensable data library;
- Pulse's management believes that the Company's capital resources will be sufficient to finance future operations and carry out the necessary capital expenditures through 2016;
- Pulse's capital allocation strategy;
- Pulse's dividend policy;
- Oil and natural gas prices;
- Oil and natural gas drilling activity and land sales activity;
- Oil and natural gas company capital budgets;
- Future demand for seismic data;
- Future seismic data sales;
- Future demand for participation surveys;
- Pulse's business and growth strategy; and

- Other expectations, beliefs, plans, goals, objectives, assumptions, information and statements about possible future events, conditions, results and performance.

Sources for the forecasts and the material assumptions underlying this forward-looking information are, where applicable, noted in the relevant sections of this MD&A.

Undue reliance should not be placed on forward-looking information. Forward-looking information is based on current expectations, estimates and projections that involve a number of risks and uncertainties, which could cause actual results to vary and in some instances to differ materially from those anticipated in the forward-looking information. Pulse does not publish specific financial goals or otherwise provide guidance, due to the inherently poor visibility of seismic revenue.

The material risk factors include, without limitation:

- Oil and natural gas prices;
- Seismic industry cycles and seasonality;
- The demand for seismic data and participation surveys;
- The pricing of data library licensing sales;
- Relicensing (change-of-control) fees, partner copy sales and asset disposition-related sales;
- The level of pre-funding of participation surveys, and the Company's ability to make subsequent data library sales from such participation surveys;
- The Company's ability to complete participation surveys on time and within budget;
- Environmental, health and safety risks;
- The effect of seasonality and weather conditions on participation surveys;
- Federal and provincial government laws and regulations, including those pertaining to taxation, royalty rates, environmental protection and safety;
- Competition;
- Dependence on qualified seismic field contractors;
- Dependence on key management, operations and marketing personnel;
- The loss of seismic data;
- Cybersecurity threats;
- Protection of intellectual property rights; and
- The introduction of new products.

The foregoing list is not exhaustive. Additional information on these risks and other factors which could affect the Company's operations and financial results is included under "Risk Factors". Forward-looking information is based on the assumptions, expectations, estimates and opinions of the Company's management at the time the information is presented.
