FORM 51-102F3

MATERIAL CHANGE REPORT

Item 1. Name and Address of Company

BALMORAL RESOURCES LTD. (the "Issuer")
2300-1177 West Hastings Street
Vancouver, BC V6E 2K3

Item 2. Date of Material Change

March 7, 2016

Item 3. News Release

The date of the news release issued pursuant to section 7.1 of National Instrument 51-102 with respect to the material change disclosed in this report is March 7, 2016. The news release was issued in Vancouver, British Columbia through Marketwired and filed via SEDAR.

Item 4. Summary of Material Change

Balmoral Resources reported the initial resource estimate for the Company's Grasset Ni-Cu-Co-PGE deposit. The Grasset deposit is comprised of the sub-parallel H3 and H1 zones.

The initial independent resource estimate for the Grasset deposit has been prepared by Mr. Pierre-Luc Richard (P.Geo., M.Sc.) and Mr. Carl Pelletier (P.Geo., B.Sc.) of InnovExplo Inc. and is summarized below. Mr. Richard and Mr. Pelletier are independent Qualified Persons pursuant to NI 43-101.

At a 1.00% NiEq* cutoff grade the H3 + H1 zones contain a combined resource of:

Indicated Resource – 3.45 million tonnes @ 1.79% NiEq* = 1.56% Nickel, 0.17% Copper, 0.03% Cobalt, 0.34 g/t Platinum and 0.84 g/t Palladium; which equates to 136,279,000 nickel equivalent lbs

Inferred Resource - 91,100 tonnes @ 1.19% NiEq* = 1.06% Nickel, 0.11% Copper, 0.02% Cobalt, 0.20 g/t Platinum and 0.48 g/t Palladium; which equates to 2,393,900 nickel equivalent lbs

- 99% of the Indicated Resource is contained within the H3 Zone
- 97.5% of the estimated resources are in the Indicated Category

Table 1 – Base Case Current Resource Estimate

> 1.00 % NiEq		Tonnes (t)	NiEq (%)	Ni (%)	Cu (%)	Co (%)	Pt (g/t)	Pd (g/t)	Contained NiEq (lbs)	Contained Ni (lbs)	Contained Cu (lbs)	Contained Co (lbs)	Contained Pt (oz)	Contained Pd (oz)
INDICATED	Horizon 1	35,900	1.09	0.98	0.11	0.03	0.16	0.38	865,800	772,600	84,100	22,700	200	400

	Total Inferred	**91,100**	**1.19**	**1.06**	**0.11**	**0.02**	**0.20**	**0.48**	**2,393,900**	**2,126,900**	**228,700**	**49,000**	**600**	**1,400**

The current mineral resource estimate is based on results from 111 diamond drill holes (39,999metres) completed by the Company since 2014. As indicated below, the base case current resource is reported above a 1.00% NiEq* cutoff grade after incorporation of estimates for mining recoveries, mining dilution, milling recoveries, smelting and refining charges and certain penalties, as well as estimated operating costs based on those associated with mines currently operating in the local region.

Resource Estimate Assumptions and Notes:

1. The Independent and Qualified Persons for the Mineral Resource Estimate, as defined by NI 43-101, are Mr. Pierre-Luc Richard, P.Geo., M.Sc., and Mr. Carl Pelletier, P.Geo., B.Sc., both of InnovExplo Inc. The effective date of the Estimate is January 12, 2016
2. These mineral resources are not mineral reserves as they do not have demonstrated economic viability.
3. While the results are presented undiluted and in situ, the reported mineral resources are considered to have reasonable prospects for eventual economic extraction.
4. The estimate includes two (2) mineralized zones (Horizon 1 and Horizon 3).
5. Resources were compiled at NiEq cut-off grades of 0.30%, 0.40%, 0.50%, 0.60%, 0.70%, 0.80%, 0.90%, 1.00%, 1.10%, 1.20%, 1.30%, 1.40%, 1.50%, and 2.00%. The base case resource potential is reported at a 1.00% NiEq cut-off grade.
6. Cut-off calculations used: CAD 48.00$ Mining, 6.00$ Maintenance, 10.00$ G&A, 22.00$ Mining for a total of 86.00$ operating costs. A mining dilution factor of 7.5% was also applied to the cut-off grade calculation.
7. *NiEq = $[[(Ni_{Grade(\%)} \times Ni_{CR(\%)} \times Ni_{Payable(\%)} \times Ni_{Price(\$)}) + (Cu_{Grade(\%)} \times Cu_{CR(\%)} \times Cu_{Payable(\%)} \times Cu_{Price(\$)}) + (Co_{Grade(\%)} \times Co_{CR(\%)} \times Co_{Payable(\%)} \times Co_{Price(\$)})] \times 2205 + [(Pt_{Grade(g/t)} \times Pt_{CR(\%)} \times Pt_{Payable(\%)} \times Pt_{Price(\$)}) + (Pd_{Grade(g/t)} \times Pd_{CR(\%)} \times Pd_{Payable(\%)} \times Pd_{Price(\$)})] / 31.1035 - Cr_{Penalty(\$)}] / (Ni_{Payable(\%)} \times Ni_{CR(\%)} \times Ni_{Price(\$)} \times 2205)$; where CR(%) is a variable concentrate recovery ratio derived from metallurgical balance study, and Payable(%) is applied on concentrates. Note that a minimum deduction of 0.20% Co was applied on concentrate.
8. NiEq calculations used: USD/CAD exchange rate of 1.14, Nickel price of US$6.56/lb, Copper price of US$2.97/lb, Cobalt price of US$13.00/lb, Platinum price of US$1,302.30/oz, and Palladium price of US$737.20/oz (These are 3-year trailing averages calculated at the effective date); Payable of 70% for Nickel, 75% for Copper, 75% for Cobalt (minimum deduction of 0.20%), 45% for Platinum, and 45% for Palladium applied on expected concentrate based on analysis of available smelting and refining cost parameters
9. Cut-off and NiEq calculations would have to be re-evaluated in light of future prevailing market conditions (metal prices, exchange rate, smelting terms, and mining costs).
10. Density values were estimated for all lithological units from measured samples. Density values for the Horizon 1 and Horizon 3 mineralized zones were interpolated from both a measured density database and a correlation database accounting for a selection of metals (Ni, Fe, Co) yielding the best correlation with the measured database.
11. The resource was estimated using GEMS 6.7. The estimate is based on 111 diamond drill holes (39,999.43 m). A minimum true thickness of 3.0 m was applied, using the grade of the adjacent material when assayed, or a value of zero when not assayed.
12. High grade capping was done on raw assay data and established on a per zone basis for Nickel (15.00%), Copper (5.00%), Platinum (5.00g/t), and Palladium (8.00g/t). Capping grade selection is supported by statistical analysis.
13. Compositing was done on drill hole sections falling within the mineralized zones (composite = 1.0 m).
14. Resources were evaluated from drill holes using a 3-pass ID2 interpolation method in a block model (block size = 5 x 5 x 5 m).
15. The Mineral Resources presented herein are categorized as Indicated and Inferred based on drill spacing, geological and grade continuity. Based on the nature of the mineralization, a maximum distance to the closest composite of 50 m was used for indicated Resources. The average distance to the nearest composite is 22.9 m for the Indicated resources and 53.6 m for the Inferred resources.
16. Ounce (troy) = metric tonnes x grade / 31.10348. Calculations used metric units (metres, tonnes and g/t). Metal contents are presented in ounces and pounds.
17. The number of metric tonnes was rounded to the nearest hundred. Any discrepancies in the totals are due to rounding effects
18. The quantity and grade of reported Inferred resources in this Mineral Resource Estimate are uncertain in nature and there has been insufficient exploration to define these Inferred resources as Indicated or Measured, and it is uncertain if further exploration will result in upgrading them to these categories.
19. CIM definitions and guidelines for mineral resources have been followed.
20. The Qualified Persons are not aware of any known environmental, permitting, legal, title-related, taxation, socio-political or marketing issues, or any other relevant issue, that could materially affect the Mineral Resource Estimate

Item 5. Full Description of Material Change

See News Release dated March 7, 2016.

Item 6. Reliance on subsection 7.1(2) of National Instrument 51-102

Not applicable.

Item 7. Omitted Information

No information has been omitted on the basis that it is confidential.

Item 8. Executive Officer

The following Executive officer of the Issuer is knowledgeable about the material change disclosed in this report. Darin Wagner, President & CEO; Business Telephone No.: (604) 638-3664.

Item 9. Date of Report

March 7, 2016
