6) Describe the Issuer's Business, Products and Services

Describe the issuer's business so a potential investor can clearly understand the company. In answering this item, please include the following:

- A. a description of the issuer's business operations;

Predictive Technology Group, Inc., a publicly traded entity with stock symbol, PRED which traded on the OTC, looks to improve lives by indentifying, developing, acquiring and commercializing medical apparatuses and treatments that address human medical needs.

Predictive Technology Group, Inc., through its wholly owned subsidiary, Predictive Therapeutics (“PRx”) revolutionizes the treatment of serious and debilitating diseases through the commercialization of novel therapeutics leveraged by proprietary gene-based companion diagnostics.

PRx has developed and/or acquired a number of proprietary technologies that open a window into the origin of human disease and the role that genes and their related proteins play in the disease’s onset and progression.

PRx uses this information as the cornerstone in the development of new diagnostics that assess a person’s risk of disease and therapeutic products designed to effectively prevent and/or treat the disease.

PRx’ utilization of molecular diagnostics focuses on the analysis of genes and their mutations to assess a patient’s inherited risk for developing a particular disease and its progression (predictive healthcare). Additionally, PRx believes that advances in the emerging field of molecular diagnostics will improve the ability to determine which patients are subject to a greater risk of developing disease and who therefore would benefit from preventive therapies. Molecular diagnostic products may also guide a patient’s healthcare to ensure the patient receives the most appropriate treatment at the most appropriate time (i.e., most effective).

PRx is well positioned with short and long-term assets in its pipeline to be a leader in the future of preventative, personalized and precision healthcare. Current trends in medicine lie in the creation of new classes of drugs that treat the underlying cause, not just the symptoms, of disease and may be useful in disease prevention. By understanding the genetic basis of disease and by working with strategic partners, PRx believes that it will be able to develop drugs and treatment protocols that are more effective, resulting in better patient outcomes at significantly lower costs.

PRx’ development expertise is uniquely enhanced by its strategic development collaborations. Some of those development assets are included below:

- 600,000 DNA samples in library as a result of a birth defect or serious maternity issue
- HIPAA compliant
- Collected from most genetically diverse population in U.S.
- Believed to be largest DNA library in world related to women’s health
- Corresponding proprietary genealogy database developed from over 50,000 public sources
- Gen DB – Proprietary genealogy database used to accelerate genetic discoveries

NHP-07 – First pharmaceutical/therapeutic candidate to be developed by PRx. Management believes NHP-07 with EndoRisk® as a companion diagnostic/prognostic is the only treatment protocol that can prevent development of endometriosis and, in women experiencing advanced stages of endometriosis NHP-07, stop the progression of the disease while suppressing the debilitating symptoms.

- Expected launch 2018
- Approximately 7.5 million women suffer from endometriosis in the United States with only 2.5 million women currently diagnosed
- 5 million women are estimated to suffer from endometriosis in the major international markets with 70 million women suffering globally
- Greater than \$1Billion annual US market
- Tremendous need for new more effective/lower side-effect therapeutics to meet this unmet demand
- Suppresses the symptoms of endometriosis in women diagnosed with endometriosis
- Prevents the development of the disease
- Believed to be superior to all competitive pharmaceuticals currently on the market
- Combination of two or more existing FDA-approved compounds, whose safety has already been established over decades

- Coupled with EndoRisk® as a companion diagnostic NHP-07 can be given prior to development of endometriosis or becoming symptomatic to prevent the disease altogether
- Patent pending for combination of progesterone and NSAIDs (Non Steroidal Anti-Inflammatory Drugs)
- Patent pending to replace traditional NSAIDs with cannabinoids to reduce the long-term side effects of NSAIDs

Genetic diagnostics do not require approval by the FDA in order to go to market if the tests are Laboratory Developed Tests (“LDTs”), which are regulated under the Clinical Laboratory Improvement Amendments (“CLIA”). It is estimated that of the 2,000 genetic tests commercially available less than a dozen were reviewed by FDA. The American Clinical Laboratory Association (“ACLA”) filed a citizen petition on June 4, 2013 challenging the FDA’s authority to regulate LDTs as medical devices under the federal Food, Drug, and Cosmetic Act (FDCA). The ACLA stated, “CLIA allows laboratories the flexibility to develop and validate LDTs quickly to respond to public health needs.” The ACLA also wrote, “Laboratories are able to update LDTs regularly as medicine advances, so that patients have access to the most advanced testing.” LDTs are laboratory services, not products, and are not distributed, nor delivered or placed into market, noted the petition. “They are proprietary procedures for performing a diagnostic test using reagents and laboratory equipment, essentially know-how.”

Proven and Experienced Team – An experienced team that has completed similar product ventures from conception to commercialization through internal sales and marketing and/or major strategic partnerships. The key executives have a track record of successfully developing and marketing high volume products in the healthcare field. As a result, PRx will be able to benefit from and leverage valuable relationships with industry leaders. Discussions have already commenced with significant companies that have major women’s health franchises.

Predictive Technology Group, Inc. through its acquisitions of both Predictive Therapeutics, LLC and LifeCode Genetics, Inc. has a number of patents and licenses agreements (notes to the “Financial Statements” has a complete list).

Predictive Technology Group, Inc. owns 10.12% (approx.) of Juneau Biosciences, LLC which came about through the aforementioned acquisition of LifeCode Genetics, Inc.
