Q4 of 2014 (cf., #6 below) saw the beginning of a capital restructuring of the corporation, in anticipation of a broadening of its corporate goals. The company sought to remove debt from its books, and several Convertible Debt holders elected to convert the debt into common shares of the company, on a pre-split basis.

This conversion of debt into common shares was consistent, and continues to be consistent with the disclosures that we have made relative to convertible debentures and the notional number of shares that have been listed as issued and outstanding.

(6) Describe the Issuer's Business, Products and Services

The issuer is a corporation organized pursuant to the laws of the State of Delaware, and was incorporated on March 31, 1986. The Issuer's primary SIC Code is 000081557. The Issuer's financial year-end date is December 31.

We continue to believe that the economic and regulatory restrictions that are operable at this time, particularly for publicly-traded companies such as our own, make an "incubator firm" a potentially strong and viable opportunity for shareholders.

Management of the corporation, with potential merger and/or acquisition opportunities at hand, has decided that a radical re-structuring of the capital structure of the corporation gives us the best possible opportunity for attracting capital in the furtherance of our corporate goals.

The Company's immediate plan continues to be to identify and acquire renewable and green energy companies and/or assets that will enhance our efforts to create a new, proprietary clean fuel today, for tomorrow's power generation industry.

The Company has also, in Q1 2016 begun discussions regarding a disruptive coal delivery and flyash removal strategy. Initial responses from utilities, coal providers, transportation systems, and waste storage/dispersal entities have been positive.

(7) Describe the Issuer's Facilities

Principal executive offices located in Fort Lauderdale, Florida. Proposed operations in Kentucky and West Virginia.

Reclamation of formerly thought to be "waste residue" at depleted coal mining sites, with application of proprietary technology to create alternative energy sources, in a "green energy, Environmentally- friendly" corporation.
