6) Describe the Issuer's Business, Products and Services

Describe the issuer's business so a potential investor can clearly understand the company. In answering this item, please include the following:

A. A Description of the Issuer's Business Operations;

Optium Cyber Systems, Inc. "the Company" was incorporated in the State of Nevada on December 31, 2003 under the name of Platinum Consulting Services and was in the business of providing business consulting services until 2006 when on May 15, 2006 it signed a Share Purchase agreement to acquire an undivided 100% right, title and interest in and to all the outstanding shares of AutoBidLive Auctions Inc. AutoBidLive Auctions Inc. was a private company incorporated in the Province of Alberta, Canada whose main asset was a proprietary software to enable real time, online auctions of virtually any product or commodity for use by the wholesale market. This included cars, boats, planes, coins, stamps, industrial products, diamonds, artwork, and livestock. As a result of the closing of the Share Purchase Agreement the Company changed its name from Platinum Consulting Services to Autobidlive Auctions International Inc. The Company subsequently changed its name again on December 26, 2006 from Autobidlive Auctions International Inc. to Auctions International Inc. although there was no change in business.

Between 2006 and 2012 the Company continued to develop and market its online auctions software and on November 20, 2012 it entered into an agreement with Rangemore Productions to produce a live interactive auction television series utilizing the AutoBidLive software. This lead to a merger with Rangemore Productions, a company that leased film studio space to independent film productions presented itself. Although this was a deviation from the original business plan, the management felt that it was an exciting opportunity and decided to pursue it. On December 31, 2012, the Company entered into a Merger Agreement and on March 31, 2013, the merger closed whereby the Company issued 42,942,000 preferred shares for all the assets and liabilities of Rangemore Productions Corp.

Prior to the closing of the Merger Agreement on March 26, 2013, the Company changed its corporate name from Auctions International Inc. to Rangemore Film Productions Corp. to reflect the closing of the Merger Agreement between the Company and Rangemore Productions Corp. and the resulting change in business. On December 19, 2013 the Company again changed its corporate name to Cre8tive Works, Inc. as there was confusion with another company using the name Rangemore but did not change it business plan or operations.

From March 2013 to August 2017 Cre8tive Works was in the business of financing media productions. The term "media productions" includes but is not limited to: feature films, documentaries, animation, television series, movies-of-the-week, television specials, webisodes and soundtracks. The business was not successful and in August of 2017 the management was presented with the opportunity to acquire a technology platform developed to analyse and monitor IT networks for cyber security vulnerabilities and breaches. As a result of the new business the Company changed its name to Optium Cyber Systems, Inc. (OCSI). OCSI has developed a proprietary process to analyze, identify and address cyber security vulnerabilities in an organization's critical IT infrastructure which is scalable to any size organization in any industry. OCSI has recently launched in the health care sector, focusing on protecting health care facilities including hospitals, nursing homes and doctor's offices from cyberthreats such as the manipulation of medical devices or theft of patient records. OCSI is a publicly traded company having its common shares quoted on the OTC Markets under the symbol "OCSY".

Secondary SIC Code:8744 – Facilities Support Management Services

D. The Issuer's Fiscal Year End Date:

December 31

E. Principal Products or Services, and Their Markets:

Principal Products or Services

Optium Cyber Systems, Inc. (OCSI), is a Texas based corporation positioning itself to be a premier provider and industry leader of cyber-risk analysis with a specialized focus on the healthcare industry.

Cybercrime

Cybercrime is now the fastest growing crime both domestically and worldwide. According to a recent report published by the FBI, on average there were 4,000 ransomware attacks per day in 2016 or one every 40 seconds. Global damages due to ransomware are predicted to exceed $5 billion in 2017. That is up from $325 million in 2015 – a 15X increase in two years. But that is just the beginning. It has been predicted that cyber crime damages will exceed $6 trillion annually by 2021 and as the world goes digital, humans have moved ahead of machines as the top target for cyber criminals. The hackers understand the human factor and smell blood.

Cybersecurity – Healthcare Industry

In 2015 the healthcare industry was the most attacked by cyber criminals according to the Cyber Security Intelligence Index published by IBM. This same report claimed that nearly 8 out of 10 healthcare institutions were hit. And it is only going to get worse. In a recent article published by CSO it was stated that ransomware attacks on healthcare organizations will quadruple by 2020. According to the Verizon 2016 Data Breach Investigations Report, the healthcare sector is 30 percent more likely than the financial sector to have a breach of the internal network with the average cost of a healthcare breach estimated to be more than $2.2 million. But not only does a cybersecurity threat pose a financial risk but creates a situation of life and death.

Cybersecurity – Medical Devices

Medical devices can be extremely vulnerable to security breaches potentially impacting the safety and effectiveness of the device. Researchers in Belgium and the UK have demonstrated that it is possible to transmit life-threatening signals to implanted medical devices. Dick Cheney ordered a change to his pacemaker to better protect it from hackers. Johnson & Johnson warned customers about a security bug in one of its insulin pumps last fall. And St. Jude spent months dealing with the fallout in some of its defibrillators, pacemakers, and other medical electronics.

There are estimated to be 15 million medical devices in use in U.S. hospitals today with the average bed utilizing 10 to 15 machines. An average size hospital with 500 beds would have a total of 7,500 machines. The devices susceptible to cyber manipulation include: drug infusion pumps, insulin pumps, x-ray systems, cardioverter defibrillators, CT scanners and refrigeration units

The fear that these medical devices get held for ransom or manipulation is very real.

Optimum Cyber Systems, Inc (OCSI) offers a suite of four related services to clients designed to detect and eliminate any potential cyber threat, timely and cost effectively. These services utilize existing industry leading methodologies and technologies to analyze, report, and then eliminate any cyber security vulnerabilities. OCSI will take on the responsibility of securing a client’s network infrastructure, freeing up internal existing IT staffers to focus on maintaining their infrastructure. The four components of the OCSI solution are:

Detect
The first step in the OCSI Solution is detection. For each new client, OCSI will perform a structured analysis of the client's IT system to identify high-risk devices and vulnerabilities within the client's network.

Mitigate
Once the initial Cyber Vulnerability Assessment has been completed, OCSI will take the collected data and develop a unique Managed Security Services Plan (MSSP) for each client. The MSSP is broken down into two components: initial setup, then ongoing monitoring. Much like a home alarm, OCSI will implement a monitoring system designed to detect, alert, and mitigate any cyber threats.

Remediate
Once a vulnerability is identified, OCSI will provide a roadmap for the organization's IT staff to effectively manage or negate the threat. At this stage OCSI will provide guidance to the client's IT personnel on how to properly implement changes to the network to avoid future threats.

Educate
The single weakest link in any organizations' information security ecosystem is the human element. Many security threats rely upon employee's lack of cyber security awareness. OCSI will provide an organization's employees the cyber security training required on how to spot security threats and effectively deal with them.
