

Evader draws the best talent from around the world with a global production system.

By utilizing a global software development team, the company can take advantage of our skilled professionals and their unmatched work ethics, round-the-clock availability, and reduced cost. This allows us to deliver the best possible solutions on time and at a fraction of the price compared to companies that only work inside the USA or other industrialized countries.

Evader's global software development team provides the company with the ability to distribute the development process throughout developed, newly industrialized, emerging, and developing nations.

Evader is becoming very successful in transitioning traditional, centralized and co-located forms of development into a form of development in which global teams collaborate across national borders, and work together on the same projects, products, or systems.

Evader experienced management team has extensive industry experience. Top executives have worked on a new generation of facial capture and recognition technology, license plate recognition technology.

Management believes that it has assembled a high quality, low cost, and very innovative technical team that can assure that product development stays ahead of the market, thus strengthening the potential for long-term strategic partners.
