6) Describe the Issuer's Business, Products and Services

Describe the issuer's business so a potential investor can clearly understand the company. In answering this item, please include the following:

A. a description of the issuer's business operations;

The company is focused on developing and bringing into production mining properties in Nevada that are ready to come into production in the near future. For more information, please visit the company web site at www.goldandsilvermining.com or call Investor Relations at 801-679-3945. These are large, gold and silver deposits.

Nevada Gold Mine: (Goldfield Basin Mine) An 80 acre portion of the mining claims has been assayed and analyzed and are now permitted and bonded and in the early stages of production. The 80 acres contain over 2 million tons of minable ore and another 4 million+ tons in the adjoining 160 acres which have also had some assay work verifying similar gold content. One of our permits geological review fact sheet from the state of Nevada reads as follows: "Overlaying the Wyman is the Reed Dolomite, a gray coarsely crystalline dolomite, which is overlain by an alluvial layer (gold-bearing pay dirt) that ranges in thickness from 10 feet to greater than 100 feet." The overlaid alluvial layer is the distance from the surface to bedrock. Initial sampling in the 80 acres selected for current production has confirmed that bedrock is 10 to 15 feet below the surface. This means that all of the mining is near surface mining.

As each 5 acre production segment is completed, the grid assay analysis of the next segment will already be completed and proof of expected recovery generated. For example the initial production area selected is TR21. The results from bulk sample TR21 shows concentrate results of 0.585 ounces per ton of gold in the top 5 feet over the large gravity table and 0.584 ounces per ton recovered through a high speed centrifugal concentrator and then 0.829 opt in the 5 to 10 feet area analyzed across the large gravity table and 0.141 opt through the high speed concentrator. The large gravity table overflow was piped to the concentrator so the results can be added together to arrive at total concentrate assay results. Since the large batch ore was hauled a considerable distance for analysis, the operation is still conducting assay analysis on a small scale and is waiting on delivery of on site equipment that will do at least as well or better than the numbers we have already verified at TR21 where production will continue using the new on site equipment.

The concentration equipment does not use chemicals and since the ore being processed is at or near the surface there is little to no impact to the environment. The area is extremely arid with little to no animal or plant life. The area is also flat with no washes or streams in the area so any mining activity is very easy to control and and reclaim and return to its natural arid state.
