5) Issuer's Business, Products and Services

The purpose of this section is to provide a clear description of the issuer's current operations. In answering this item, please include the following:

- A. Summarize the issuer's business operations (If the issuer does not have current operations, state "no operations")

EuroSite Power Inc., (the "Company", we, our, or us), distributes, owns and operates clean, on-site energy systems that produce electricity, hot water and heat and cooling in Europe, principally within the United Kingdom. We provide comprehensive power purchase style thermal and power generation solutions to our customers. These solutions include equipment installation as well as operation and ongoing maintenance under multi-year service agreements at no upfront cost to the customer. We own and operate the equipment that we install at customers' facilities and sell the energy produced by these systems to the customers on a long-term contractual basis at prices guaranteed to the customer to be below conventional utility rates. We call this business the EuroSite Power "On-Site Utility" model.

- B. Describe any subsidiaries, parents, or affiliated companies, if applicable, and a description of such entity's business, contact information for the business, officers, directors, managers or control persons. Subsidiary information may be included by reference

The Company was incorporated as a Delaware corporation on July 9, 2010. On September 17, 2010, the Company registered EuroSite Power Limited as a wholly-owned subsidiary with the Registrar of Companies for England and Wales. On 26 January, 2018 the Company registered EuroSite Power Holdings Limited as a wholly-owned subsidiary of EuroSite Power Limited with the Register of Companies for Cyprus.

- C. Describe the issuers' principal products or services, and their markets

Our On-Site Utility supplies electricity, heat, hot water and cooling at a discounted price to commercial and industrial customers such as healthcare facilities, hotels, large multi-family residential buildings, leisure centers, industrial buildings, schools and colleges. The Company's natural gas-powered cogeneration systems produce electricity from an internal combustion engine that drives a generator, while the heat from the engine and exhaust is recovered and typically used to produce heat and hot water for use at the site. The Company also offers highly-efficient gas engine driven heat pumps and water chiller systems for building heating and cooling applications that operate in a similar manner, except that the engine's power drives a compressor while recovering heat from the engine for hot water. To date, the Company has delivered On-Site Utility solutions based cogeneration plus a single heat pump system at one customer facility. Cogeneration systems reduce the amount of high-cost electricity that the customer must purchase from the local utility, and produce valuable heat and hot water for the site to use as required. By simultaneously providing electricity, hot water and heat, cogeneration systems have a significant, positive impact on the environment

by reducing carbon dioxide, or CO₂, emissions as compared to the CO₂ produced by making these forms of energy separately. System redundancy is also enhanced because the customer remains connected to the electric grid and retains their existing boilers. Therefore, if either the grid or our equipment were to experience failure, neither instance would result in a power outage for the customer.

Our Principal Market is the United Kingdom.

In early 2018 the Company acquired 50% of the share capital of a Cypriot company, FCN Energy Logistics Limited to effectively create a Joint Venture. The Joint Venture company is the parent company and sole owner of Blue Grid Gas and Power S.A. based in Athens, Greece. The company shall be supplying natural gas both on-grid and off-grid using innovative liquid natural gas (LNG) supply chains including LNG bunkering services for shipping. On-site generation using natural gas fueled Combined Heat and Power (CHP) solutions supplied under On-Site Utility agreements will also be sold.

6) Issuer's Facilities

The goal of this section is to provide a potential investor with a clear understanding of all assets, properties or facilities owned, used or leased by the issuer.

In responding to this item, please clearly describe the assets, properties or facilities of the issuer, give the location of the principal plants and other property of the issuer and describe the condition of the properties. If the issuer does not have complete ownership or control of the property (for example, if others also own the property or if there is a mortgage on the property), describe the limitations on the ownership.

If the issuer leases any assets, properties or facilities, clearly describe them as above and the terms of their leases.

Our UK and corporate headquarters is located in Macclesfield, Cheshire and consists of 1,000 square feet of leased office space. The lease expires October 31, 2020. Storage and distribution of service parts and consumables is provided under a service agreement by a third party from their distribution center and warehousing located in Leighton Buzzard, Bedfordshire.

The Company owns, operates, and maintains approximately 40 on-site energy systems that produce electricity, hot water, heat, and cooling in the United Kingdom. These assets are located on each customer's site under the terms of On-Site Utility agreements containing a license to occupy the land used by each generation asset.
