NOTE 1 - Organization and Basis of Presentation

Cambridge Energy Corporation (the Company) was incorporated in the state of Nevada on April 9, 1996. Through 2002 Company was an independent oil and gas company engaged in the exploration and development of domestic oil and gas properties. Throughout the years ended March 31, 2009 the Company disposed of its oil and gas properties. On April 15, 2009 the Company acquired all of the assets of EnviroXtract, Inc. and plans to utilize its technologies to perform environmental remediation applications for oil spills and other hazardous chemical remediation applications.

The accompanying financial statements have been prepared in accordance with generally accepted accounting principles for interim financial information. In the opinion of management, all adjustments considered necessary for a fair presentation have been included. Interim results are not necessarily indicative of results for a full year. The information included in these financial statements should be read in conjunction with information included in the December 31, 2011 financial statements.

NOTE 2 - Summary of Significant Accounting Policies

Cash and Cash Equivalents

The Company considers those short-term, highly liquid investments with original maturities of three months or less as cash and cash equivalents.

Impairment of Long-Lived Assets

In accordance with Statement of Financial Accounting Standards (“SFAS”) 121, "Accounting for the Impairment of Long-Lived Assets and for Long-Lived Assets to be Disposed of," the Company reviews its long-lived assets for impairments. Impairment losses on long-lived assets are recognized when events or changes in circumstances indicate that the undiscounted cash flows estimated to be generated by such assets are less than their carrying value and, accordingly, all or a portion of such carrying value may not be recoverable. Impairment losses then are measured by comparing the fair value of assets to their carrying amounts. The Company recognized no impairment loss at December 31, 2010 or 2011.

Revenue Recognition

Revenues are recognized when earned.

Earnings Per Share

The weighted average number of shares used for computing earnings per share reflects the conversion of 17,442,699 convertible preferred shares into common.

Income Taxes

The Company records deferred income taxes using the liability method as prescribed under the provisions of SFAS No. 109. Under the liability method, deferred tax assets and liabilities are recognized for the expected future tax consequences of temporary differences between the financial statement and income tax bases of the Company's assets and liabilities. An allowance is recorded, based upon currently available information, when it is more likely than not that any or all of the deferred tax assets will not be realized. The provision for income taxes includes taxes currently payable, if any, plus the net change during the year in deferred tax assets and liabilities recorded by the Company

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosures of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from these estimates.

Environmental Remediation Costs

Environmental remediation costs are accrued based on estimates of known environmental remediation exposure. Such accruals are recorded even if significant uncertainties exist over the ultimate cost of the remediation. It is reasonably possible that the Company's estimates of reclamation liabilities, if any, could change as a result of changes in regulations, extent of environmental remediation required, means of reclamation or cost estimates. Ongoing environmental compliance costs, including maintenance and monitoring costs, are expensed as incurred. There were no environmental remediation costs accrued at December 31, 2010 or 2011.

Advertising Costs

The Company's policy regarding advertising costs are to expense them as they are incurred. The Company had not incurred any advertising costs during the period ended December 31, 2010 or 2011.

Recently Issued Accounting Pronouncements

SFAS No. 149 "Amendment of Statement 133 on derivative instruments and hedging activities". This statement amends and clarifies financial accounting and reporting for derivative instruments embedded in other contracts (collectively referred to as derivatives) and for hedging activities under SFAS 133, "Accounting for derivative instruments and hedging activities".

SFAS No. 150 "Accounting for certain financial instruments with characteristics of both liabilities and equity". This statement establishes standards for how an issuer classifies and measures certain financial instruments with characteristics of both liabilities and equity.

The Company believes that the above standards would not have a material impact on its financial position, results of operations or cash flows.

NOTE 3 - Going Concern

The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. This basis of accounting contemplates the recovery of the Company's assets and the satisfaction of its liabilities in the normal course of business. Through December 31, 2011, the Company had incurred cumulative losses of $634,079 and had positive working capital of $180,803 as of December 31, 2011. The Company's ability to continue as a going concern is dependent upon the Company's ability to generate revenues based on its business plan and to obtain financing adequate to finance the development of its technologies and achieve a level of revenues adequate to support the Company's cost structure. Management's plan of operations anticipates that the cash requirements for the next twelve months will be met by obtaining capital contributions through the sale of its common stock and cash flows from operations. There is no assurance that the company will be able to implement the plan.

NOTE 4 - Stockholders' Equity

At various stages in the Company's development we have issued shares of common stock for services or assets with a corresponding charge to operations or property and equipment. In accordance with SFAS 123, these transactions, except for stock issued to employees, have been recorded on the Company's books at the fair value of the consideration received or the fair value of the common stock issued, whichever is more reliably measured.

Preferred Stock

On April 15, 2009, the Company issued 6,000,000 shares of Series E Preferred Stock which converts to common on a 50-for-1 basis and carries no voting rights. On March 21, 2010 the Company issued 2 shares of Series F Preferred Stock for services. The Series F shares are non-convertible. Each of the Series F shares have voting rights equal to the number of all Common Shares outstanding plus all Preferred Shares outstanding. On March 21, 2010, the Company issued 1,831,647 shares of Series G Preferred Stock for services. On March 24, 2010, the Company issued 12,000,000 shares of Series G Preferred Stock for services. Each share of Series G Preferred Stock is convertible to common on a 1-for-1 basis and carries no voting rights. On April 6, 2011, the Company issued 2,245,000 shares of Series H Preferred Stock for services. Each share of Series H Preferred Stock is convertible to common on a 100-for-1 basis and carries no voting rights.

Stock Options and Warrants

There are no outstanding unexpired warrants or options as of December 31, 2010 or 2011.

NOTE 5 - Mining Claims

On October 15, 2012, the Company entered into an agreement to Lease with Option to Purchase the six 160 acre mining claims known as the Gold Star from Western Gold Company, LLC. The claims, totaling 960 acres, are located on U.S. Bureau of Land Management administered land in western Nevada. The exercise price of the option was specified to be the greater of $400,000,000 or 0.1% of the total measured, indicated and inferred precious metals and rare earth element values contained in the claims, computed as of the date of the sale and utilizing the values established by the subsequent testing specified under the terms of the Agreement. Subsequently on October 17, 2012, the Company amended the Lease/Option Agreement wherein Western Gold Company, LLC agreed to transfer 100% of the ownership of the Gold Star Mining Claims into EnviroXtract, Inc. in exchange 100% of a new class of preferred shares that will effectively convert into 89% of the total common and preferred stock of the Company. The effective date of the acquisition was specified to be September 30, 2012. According to the geologist certified valuation dated March 30, 2010, the claims have 69 million tons of measured resources with an in-ground value of $39.3 billion, 743 million tons of indicated resources with an in-ground value of $423.5 billion and 465 million tons of inferred resources with an in-ground value of $265.0 billion. The total in-ground value of the gold and silver resources of the Gold Star Mining Claims based on the current market prices of gold and silver is $727.8 billion.

SFAS 123 specifies that this transaction be recorded on the Company's books at the fair value of the consideration received or the fair value of the stock issued, whichever is more reliably measured at the date of the transaction. Since the Company had entered into an option agreement immediately prior to the acquisition, the option exercise price as specified in the agreement, viewed in conjunction with the certified geologist's valuation, represents the most reliable measure of the fair value of the Claims as of the transaction date. The Company has therefore determined that the acquisition should be valued and recorded on the books based on the Option Exercise Price of $400,000,000 in accordance with SFAS 123. Furthermore, in accordance with the provisions of the Lease/Purchase Option agreement, the Company will increase the value of the Claims if the subsequent testing specified under the terms of the agreement results in a total value for resources such that 0.1% of the total measured, indicated and inferred precious metals and rare earth element values contained in the claims are greater than $400,000,000. The value of the Claims have been credited entirely to paid-in capital until such time as a new class of preferred stock is created and issued pursuant to the provisions of the agreement.

NOTE 6 - Commitments and Contingencies

On April 5, 2012 the Company revised its prior oil processing technology license agreement issued by Extractive Technologies, Inc. This agreement is non-exclusive, requires minimum monthly license fee payments of $8,000 and includes a 4% production royalty. Also on April 5, 2012 the Company entered into a second agreement with Extractive Technologies, Inc. for certain non-exclusive rights to ore processing technology. This agreement also requires minimum monthly license fee payments of $8,000 and includes a 4% production royalty.

At December 31, 2010 and 2011, the Company was not obligated under any non-cancelable operating or capital lease agreements.

Litigation

At December 31, 2010 and 2011, the Company was not party to any legal proceedings. To the knowledge of management, no federal, state or local governmental agency is presently contemplating any proceeding against the Company.

NOTE 7 - Related Parties

There are no related party transactions in the period ending December 31, 2010 or 2011.

NOTE 8 - Income Taxes

The Company has adopted FASB 109 to account for income taxes. The Company currently has no issue that creates timing differences that would mandate deferred tax expense. Net operating losses would create possible tax assets in future years. Due to the uncertainty as to the utilization of net operating loss carry forwards, an evaluation allowance has been made to the extent of any tax benefit that net operating losses may generate. No provision for income taxes has been recorded due to the net operating loss carry forward of $634,079 as of December 31, 2011 that will be offset against further taxable income. No tax benefit has been reported in the financial statements.

Deferred tax assets and the valuation account as of December 31, 2010 and 2011 are as follows:

	2010	2011
Deferred tax asset:		
Net operating loss carry forward	$ 465,588	$ 634,079
Valuation allowance	(465,588)	(634,079)
	$ -	$ -

The components of income tax expense are as follows:

	2010	2011
Current Federal Tax	$ -	$ -
Current State Tax	-	-
Change in NOL benefit	186,235	169,091
Change in allowance	(186,235)	(169,091)
	$ -	$ -

The Company has incurred losses that can be carried forward to offset future earnings if conditions of the Internal Revenue Codes are met. These losses are as follows:

Year of Loss	Amount	Expiration Date
2011	$ 169,091	2031

ITEM IV – **Management's Discussion and Analysis**

EnviroXtract, Inc. (EVXA) EnviroXtract has expanded its business model to focus on the acquisition and development of large US gold and silver mining properties. While the Company continues to explore opportunities to utilize its efficient environmental plasma technologies for both oil and ore extraction and processing, Management has placed its highest priority on pursuing gold and silver mining opportunities for generating substantial revenues and profits for the Company.

EnviroXtract is currently finalizing an agreement for the acquisition of 100% ownership in the Gold Star Mine from Western Gold Company in exchange for EnviroXtract stock. Under the terms of the proposed Agreement, Western Gold Company, and/or its assigns, will become the majority shareholder in EnviroXtract as a result of this transaction.

The Gold Star Mine is a large, desert placer mining property in Esmerelda County, Nevada, near the town of Goldfield. It is comprised of six U.S. Bureau of Land Management claims making up 960 acres of total land area. The property has been drilled and tested on several occasions by certified geologists and mining engineers. The most recent geological valuation of the property was completed in 2010. Based on this report, the estimated combined gold and silver resources are as follows:

Measured Reserves - 69 Million Tons – Valued at $39.3 Billion
Indicated Reserves - 743 Million Tons – Valued at $423.5 Billion
Inferred Reserves - 465 Million Tons – Valued at $265.0 Billion

Total Estimated Reserves - 727.8 $Billion*
(*based on Kitco published values as of September 8, 2012)

The Gold Star Mine in western Nevada promises to be a cornerstone development project, under which EnviroXtract plans to pursue the mining and production of gold and silver ores. Management is focused on assembling a team of mining specialists and obtaining the necessary capital to place the Gold Star Mine into production as quickly as possible.

EnviroXtract holds licenses for an efficient technology to perform environmental remediation applications for oil spills and other toxic chemical remediation applications that might require a complete separation of hazardous and/or toxic chemicals from contaminated soil. The technology has proven capable of removing oil and other chemicals from soil, oil sands, and shale, and is extremely energy efficient.

For utilization in the oil sands and oil shale industry, the plasma technology produces a unique thermal energy that intensely excites the oil feedstock at a molecular level, releasing any chemical bonds and breaking down molecular compounds to their elemental state. In short, our plasma technology is capable of efficiently extracting 99.9% of bitumen from oil sands while simultaneously performing upgrading, hydro-treating, and partial refining of the bitumen product.

The EnviroXtract *low-density* plasma-enhanced technology also creates a unique ore processing methodology primarily for use in smelting and refining gold and silver ore concentrates. Compared to conventional processing methodologies, the differences are significant. Most importantly, the EnviroXtract process is capable of generating extreme temperatures efficiently and cost effectively. This extreme heat allows the process to thoroughly break down an ore body completely, including the carbonates that encapsulate precious metals and typically cannot be broken down utilizing conventional processing methods. As these carbonates are broken down, the encapsulated precious metals are released. The fact that the EnviroXtract process destroys the ore body and releases all of the metals explains the increased yields of gold and silver that EnviroXtract is able to achieve.

Management recognizes the challenges and limitations in raising the significant capital necessary to develop, engineer, and manufacture commercial and industrial implementations of its unique plasma technologies. The Company is not currently in a financial position to undertake the direct commercialization of its technologies due to these capital restraints. Under its recent change in business direction to begin aggressively pursuing US gold and silver mining opportunities, Management has placed its highest priority on raising the capital necessary to place its mining properties into production in order to rapidly begin generating substantial revenues and profits for the Company. Management believes this to be the most promising approach to successfully increase its stock price and establish long-term investment stability on behalf of its shareholders.

Off-Balance Sheet Transactions

The Company does not have any transactions, agreements or other contractual arrangements that constitute off-balance sheet arrangements.

ITEM V- **Legal Proceedings**

The Company is not party to any material legal proceedings or administrative actions.

ITEM VI- **Defaults of Senior Securities**

NONE

ITEM VII- **Other Information**

NONE

ITEM VIII– **Material Contracts**

NONE

ITEM IX – **Issuer's Certifications**

1. I, Carlton Wingett, have reviewed this September 30, 2012, Quarterly Disclosure Statement of EnviroXtract, Inc.;

2. Based on my knowledge, this disclosure statement does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by the disclosure statement; and

3. Based on my knowledge, the financial statements, and other financial information included or incorporated by reference in this disclosure statement, fairly present in all material respects the financial condition, results of operations and cash flows of the issuer as of, and for, the periods presented in this disclosure statement.

Date: November 9, 2012

Carlton Wingett, President and CEO
