7) Describe the Issuer's Facilities

The Company's mining property, known as the Ruby Mine, covers 9.26 contiguous square miles and consists of 13 patented and 291 unpatented claims in Jefferson County, Montana. The northern 8.34 square miles of the property

contains a large copper/molybdenum porphyry system and the southern 0.92 square miles hosts a high-grade gold, silver and base metals epithermal volcanic system.

The property is host to gold and silver as well as multiple base metals such as copper, lead, zinc, cobalt and molybdenum. The northern 8.34 square miles of the Property contain a large copper/molybdenum porphyry system and the southern 0.92 square miles host a high-grade gold, silver and base metals epithermal volcanic system. The Property has a recorded history of producing 42,184 ounces of gold at a grade of 2.44 ounces per ton ("opt") and 446,565 ounces of silver at a grade of 38.66 opt. The project has now reached the definitive drilling stage.

The property lies between two major mines and shares many geological features including the same geological formation (the "Boulder Batholith") with them. One is the world famous Butte Mining District now owned by Montana Resources, which is 14 miles southwest of the Ruby Property, has exceeded \$50 billion of high-grade base and precious metals production since the 1860's (at present mineral prices) and continues in production. The other mine is the "Montana Tunnels Mine", 20 miles northeast of the Ruby. Montana Tunnels Mine was a major producer from the 1860's through the early 1930's, and was brought back into production in 1988. This open pit mine has produced more than 50 million tons of gold, silver, lead and zinc ore.

The Company's facilities consist of a flotation mill presently permitted for up to 150 tons of production per day. The building of approximately 180 by 50 feet contains offices, laboratories, facilities for core splitting and storage, welding repairs, equipment storage and a staging area for exploration programs.
