Holladay Stock Transfer

2939 N. 67th Place

Scottsdale, AZ, 85251

480-481-3940

Holladay Stock Transfer is registered under the Securities Exchange Act of 1934 and regulated by the SEC.

Part C. Business Information

Item VIII The nature of the issuer's business

The Company has focused their current operation on the exploration of its Gallo Property, which is predominantly a Gold Deposit.

The Gallo Property is in the Tecuala Mineral District, which is located in the State of Nayarit, Mexico. This Property is in what is considered to be a widely mineralized area and identified as a major deposit of gold and other minerals. The Area has been widely explored and is currently being successfully mined by several known mining and geological institutions.

Based on geological findings on the Gallo de Oro Property, a resource/reserve estimate was calculated on reserves on the Property. Data was obtained using polygon approach and with several considerations taken hence defining the estimate on the basis of three (3) categories, measured, indicated and inferred.

The resource estimate was further refined and a mineable reserve was produced using geologic reserve interpellation. The Philosophy of the company is to commence mining whatever viable reserve is available and continue with exploration that would be financed internally to increase the resource since the potential of the area is overwhelming.

Operational Plan The Gallo de Oro Property

The Company staff has extensive experience in mining operations in Mexico and are familiar with all facets of mining production.

In developing the Gallo de Oro Property, the strategy of the Company is to mine and process existing ore and additional ore lying within the surface zones in the mineral deposit. This will be done using the Small Scale Mining Permits that the Company currently has.

Simultaneously the Company will be pursuing a further exploration program of the area. This will entail rehabilitation of the tunnels for the purpose of determining the extent of mineralization at depth as well as upgrade the category of inferred reserves of ore into the “measured and indicated” category of reserves.

The mineral structure on the Gallo de Oro Property is such that the minerals are encased in hard rock. The hard rock will then be extracted and crushed into smaller quantities. Currently the Company has extracted over 5,000 tons of ore that it has stockpiled. This ore will then be transported to a mill where it will undergo custom milling, resulting in gold bullion.

B. Management’s Discussion and Analysis of Financial Conditions of Operations.
