Wialan Technologies, Inc. Reports its Third Quarter Results

Continued Progress in Rolling Out the Wialan Brand

SUNRISE, FL--(September 19, 2014) - Wialan Technologies Inc. (OTC Pink: WLAN) (PINKSHEETS: WLAN) (the "Company"), the next generation Wi-Fi and security systems provider, recently published its operating results for the third quarter ended September 30, 2014 and is reporting supplemental information regarding the current status of its business. (The full quarterly report can be accessed via www.otcmarkets.com under the WLAN trading symbol for "Filings and Disclosures"),

The Company continued with the planned rollout of its product brand – its innovative combined Wi-Fi/Public Address/ Security Surveillance system, and the rollout installations in Miami Dade County, as well as internationally. Revenues for the 9 months ended September 30, 2014 totaled \$ **154,924** (compared with revenues of only \$ **21,741** for the 9 months ended September 30, 2013).

Key achievements in third quarter 2014 were as follows:

- We successfully continued the rollout installation of the 4.9 GHz band Wialan product in Miami Dade County under our overall multi-year agreement with the County.
- We attended a high profile ribbon-cutting ceremony on August 8, 2014 at the first Dominican Republic school fully operating the Wialan technology. This was attended by local government officials and senior management of both the Company and Hughes Network. This installation and successful operation of the Company's technology occurred at the Cigar Family Community School located in the Bonao region of the Dominican Republic and has approximately 500 students from pre-school the 12th grade. It is part of the Cigar Family Community Complex

which includes the Elementary and High Schools, Health Clinic, Baseball and Basketball Stadiums, Solar Energy Station and Organic Farm. The Cigar Family Community Complex serves well over 5,000 families and has achieved tremendous results and local acclaim. With this milestone completed, the road is now open for the Company to complete negotiations with the government of the Dominican Republic to roll out the Wialan system to many more schools in the Dominican Republic beginning in first quarter 2015.

- As one of the finalists in bidding for the installation of its Wi-Fi communication solution to be integrated into a comprehensive disaster recovery system serving New York City, senior representatives of the Company successfully presented the Wialan product and explained its capabilities at a high level presentation to the senior New York City/ RISE program administrators on October 7, 2014. The winning provider is expected to be announced in late November, 2014. Should the Company become the winner, the contract will be worth more than \$ 4.5 million in gross revenue to Wialan.

- The Company was chosen to exclusively supply Wi-Fi (wireless internet connectivity) to participants and vendors at the Ft. Lauderdale Boat Show from October 30-November 3, 2014. The choice was made by Yachting Promotions, Inc., DBA Show Management, to provide secure Wi-Fi hotspot coverage for the Ft. Lauderdale Boat Show based upon Wialan's previously successful demonstration of its Wi-Fi internet capabilities at the St. Pete Boat Show in December 2013. Wialan provided a wireless internet protocol (IP) camera surveillance network at the boat show providing real-time HD camera viewing of selected boat show locations. In addition, Wialan demonstrated a Wi-Fi phone (VOIP) solution at the Ft. Lauderdale Boat Show using its proprietary Wi-Fi protocol software. It is estimated that the 2014 Ft. Lauderdale Boat Show was attended by over 120,000 people and exhibited some of the grandest yachts available for sale in the world.
