Information contained in a Financial Report is considered current until the due date for the subsequent Financial Report. To remain in the OTC Pink Current Information tier, a company must post its Annual Report within 90 days from its fiscal year-end date and Quarterly Reports within 45 days of its fiscal quarter-end date.

## **6) Describe the Issuer's Business, Products and Services**

Describe the issuer's business so a potential investor can clearly understand the company. In answering this item, please include the following:

A. a description of the issuer's business operations;

WiFi Wireless Inc.'s ("WiFi Wireless") products are developed for use in the military, maritime and commercial markets to be used internationally. WiFi Wireless utilizes GPS (Global Positioning Satellites) for tracking products used in the shipping and transportation industries as well as applications using current UHF frequencies enabling WiFi Wireless hardware to provide a greater range of service from the POP ("Point of Presence") versus the conventional wi-fi (802.11) retail space application.

WiFi Wireless provides an expanded network technology to the traditional wi-fi (802.11) system. Currently, wi-fi (802.11) systems are confined to "Hot Spot" locations within a limited radius. WiFi Wireless focuses on "Space-Time" technology applications by using current UHF frequencies that enables WiFi Wireless' hardware to provide 10 miles of service from the POP Point of Presence, rather than the conventional wi-fi (802.11) retail space application. WiFi Wireless utilizes a base station antenna with a capacity that will allow up to 25,000 simultaneous users without degradation in performance. WiFi Wireless enables business franchises to be part of the WiFiWireless network by providing a POP site in one central location, instead of multiple, costly, small networks at a fraction of the price of current T-Span charges affiliated with standard "HotSpot" networks.

WiFi Wireless applies this technology as a leading provider of satellite and wireless cargo container monitoring and tracking systems. WiFi Wireless' technology provides an entirely new class of cargo security that is ideally suited for homeland security. Currently, The United States Department of Homeland Security only inspects (opens) 6 percent of 11 million cargo containers that enter U.S. seaports annually. This small percentage of inspections performed only on high risk containers is not an effective security measure even when complemented with the use of X-ray scanners. However, WiFi Wireless provides a solution that satisfies the hazardous material detection measure and many other concerns which are part of current mandates, and are expected to be part of more stringent future mandates.

During the past five years WiFi Wireless has developed and built a system of monitoring shipboard containers. The WiFi Wireless WFSCT system can be integrated on every ship with existing communications systems utilizing its software interface capabilities. This system can communicate large amounts of data regarding the condition and location of cargo containers, at rapid rate, in multiple environmental conditions, in real time format, and this information can be accessed anywhere in the world by using a satellite-Internet based monitoring system.

WiFi Wireless' CCMD product consists of tags that are designed for installation on cargo containers. These tags send information to data loggers. The data loggers then collectively send the tag data to the gateway box which in turn transmits the data to the access point antenna. The data is then received by a computer on the ship's bridge for monitoring the status of each container. The data is then relayed to the gyroscopic stabilized antenna platform, where the data is then beamed to a satellite gateway and transmitted down to an Internet accessible data base. The tags relay information about the container to the person on the bridge of the vessel, as well as having the capability of transmitting this information, worldwide via the Internet, so that the container owner, or security organization, can view the status of the container. The movement of the container is tracked by using a GPS system which monitors the security status of the container, in real time. Temperature changes in the container, its location, intrusion into the container, and the presence of explosives or hazardous materials, can all be detected with this device. Operation of the device does not require dedicated cabling or cumbersome antennas, and the device's streamlined, self contained systems utilize laser gyro controlled platforms, which do not incorporate moving parts. What separates WiFi Wireless' system from competitor's systems, are WiFi Wireless' WFSCT Gateway (receiver/transmitter) Box and the WFSCT Access Point antenna.

There are numerous companies that are making tags for overseas containers that use a variety of ways to gather the data, but none of these companies' products have all the capabilities and features that WiFi Wireless' product does. Unlike WiFi Wireless' device, some competitors' tags give data at the ports upon arrival, and some tags give data on the ship using miles of expensive cables. To date, no one has a wireless Gateway (Receiver/transmitter) Box, or a wireless Access Point antenna. These devices are unique in the wireless communication industry, and were designed and built by WiFi Wireless. While the system itself is proprietary and state-of-the-art, the system's components and resource supplies, are cost effective and readily available, and have been universally adopted as the industry standard. This compatibility with existing components, allows it to be integrated with existing architecture on a global level. The ability of WiFi Wireless' system to interface with multiple hardware configurations is evidence of its adaptability and insures it's broad applicability.

At the heart of the system is the CCMD's innovative, proprietary software which has the ability to successfully integrate with the CCMD hardware configuration and exchange information (interface) between the various hardware components and the computer. The software's revolutionary algorithm has been repeatedly tested and has proven to be hack-proof and unbreakable, and has demonstrated the ability to provide a link-level encryption to prevent unauthorized access. WiFi Wireless' cargo container monitoring device is a well engineered and cost effective product that is tamper proof, maintenance free, user friendly, and addresses security gaps in the supply chain that are overlooked by the competition. Its technology is on the cutting edge and ahead of its time, with capabilities that are far superior to its competitors. Additionally, WiFi Wireless' solution is fully scalable, and allows for expansion and innovations in technology.

B. Date and State (or Jurisdiction) of Incorporation:

August 28, 1989 - Incorporated in the state of Oregon as Sunburst Resources Inc.; shelved as an entity, to be actively involved in business at a later date.
