Net Medical Xpress Announces New Wi-Fi Enhancements to its Telemedicine Video Conferencing System

ALBUQUERQUE, N.M. – February 22, 2017 -- Net Medical Xpress Solutions, Inc. (OTCQB: NMXS), a provider of a wide range of telemedicine services, has now developed a major improvement to its WebRTC Conference Switch technology.

Rafael Rubio, Chief Technology Officer, Net Medical said, "We have extended the feature set of our video conferencing cart to activate the built in Wi-Fi capabilities for connecting to WPA networks. Previously, we only supported wireless through the use of a customer supplied bridge which, in theory, would provide the best integration possible to various networks. In practice, the wireless bridges were often unreliable or too slow to connect for a telemedicine application."

Dick Govatski, CEO, Net Medical, said "Due to customer demand, we enabled the Dell All-In-One system with our custom Linux operating system to connect to Wi-Fi networks directly and to act as a signal strength meter for identifying the strong and weak areas of coverage."

Govatski continued, "Our customers now have the option of using wired, built in wireless or their own wireless bridge for their connectivity needs. The significance of the enhancements allows customers to automatically switch between wired and wireless. They also have the added benefit of using our WebRTC Conference Switch to easily take up to date readings of Wi-Fi coverage and signal strength in their facilities.

Net Medical has a low cost upgrade to existing systems for providing the video conferencing products in room-to-room conferencing with either wired or wireless connection methods.

About Net Medical Xpress Solutions, Inc.

Net Medical Xpress is a multi-faceted telemedicine company with four operating segments, over 435 physicians under contract, 350,000 cases completed in 2015 and offices in three cities in the U.S. The company provides telemedicine programs for diagnostic and clinical medical services to mobile companies, urgent cares, hospitals, trauma centers, imaging centers, jails, nursing homes, corporate health departments and out patient medical facilities. The company's proprietary, web-based Telemed Building Blocks technology is Net Medical Xpress' customizable technology, and enables medical providers to make real-time assessments of patients' conditions and treatment needs.
