

FOR IMMEDIATE RELEASE

Nevis Capital Corporation and Arbit Media progress report

May 17, 2016

Lake Kiowa, TX

Nevis Capital Corporation (OTC: OCEE)

Nevis Capital Corporation wanted to update the progress of their investment in Arbit Media, LLC. Arbit's social media asset called BoostP, is not only the latest Over-The-Top (OTT) messaging service but has become a mobile web traffic source solution to help optimize direct distribution channels and increase market exposure with capabilities never before seen in the market. Arbit has substantially increased their registered mobile devices from around 40,000 users at the end of 2015 to more than 20,000,000 currently. Arbit is expecting exponential growth to increase the number of registered devices to exceed 100,000,000 in the next few months.

Arbit recently announced the launch of its BoostP For Amazon (Nasdaq: AMZN) Booking Engine at <http://www.boostpforamazon.com>, a first-of-its-kind mobile web traffic source solution to help Amazon sellers and associates optimize their direct distribution channel and increase sales. Amazon sellers and associates can now book single or multi day campaigns to drive mobile web traffic to their Amazon store. Since integrating intelligent advertising capabilities into the BoostP.Mobi messaging platform, the mobile in-context aspect has shown to drive better conversion rates and increase online revenues for sellers and associates

There are over 8.6 trillion SMS messages and over 10 trillion OTT messages sent annually. Global surveys say that texting is the second most likely action on a phone at 75%, while using social networking sites and using the internet is 25% and 23% respectively. The popularity of OTT messaging services grew because of the ability to send messages via internet free of charge. These services came to consumers in the form of smartphone apps such as KIK, Whatsapp, Viber, and textPlus. While these apps proved the demand for free messaging, smartphone apps are only capable of addressing 30% of the total phone market. BoostP messaging service is compatible with both feature phones and smartphones and addresses all 6.8 billion phones in the market. BoostP is addressing the entire mobile phone market and has the capability to promptly become the largest network in the world. Our messaging service has virtually no barriers to enter because all that is required is the user's phone number. Each activated phone in BoostP's network will cost fractions of a penny to maintain, making the technology easily scalable.
