

WorldFlix (OTC: WRFX) is proud to announce:

Paranotek launches Swanlock for Android to help families fight smartphone overuse.

Set time-outs for child's smartphone use either manually or via customizable timers. Time-outs can be accompanied by customized photo messages, explaining why the time-out is necessary.

Los Angeles, CA – September 28th, 2017 - With all the fun, engaging and social activities on the Internet these days, children are in high risk of falling victims to smartphone addiction. Help your child to build a healthy balance between their smartphone use and the more important things in life, such as family time, housework, homework and bedtime! Swanlock is a one-of-a-kind Android app that helps you and your child succeed in this.

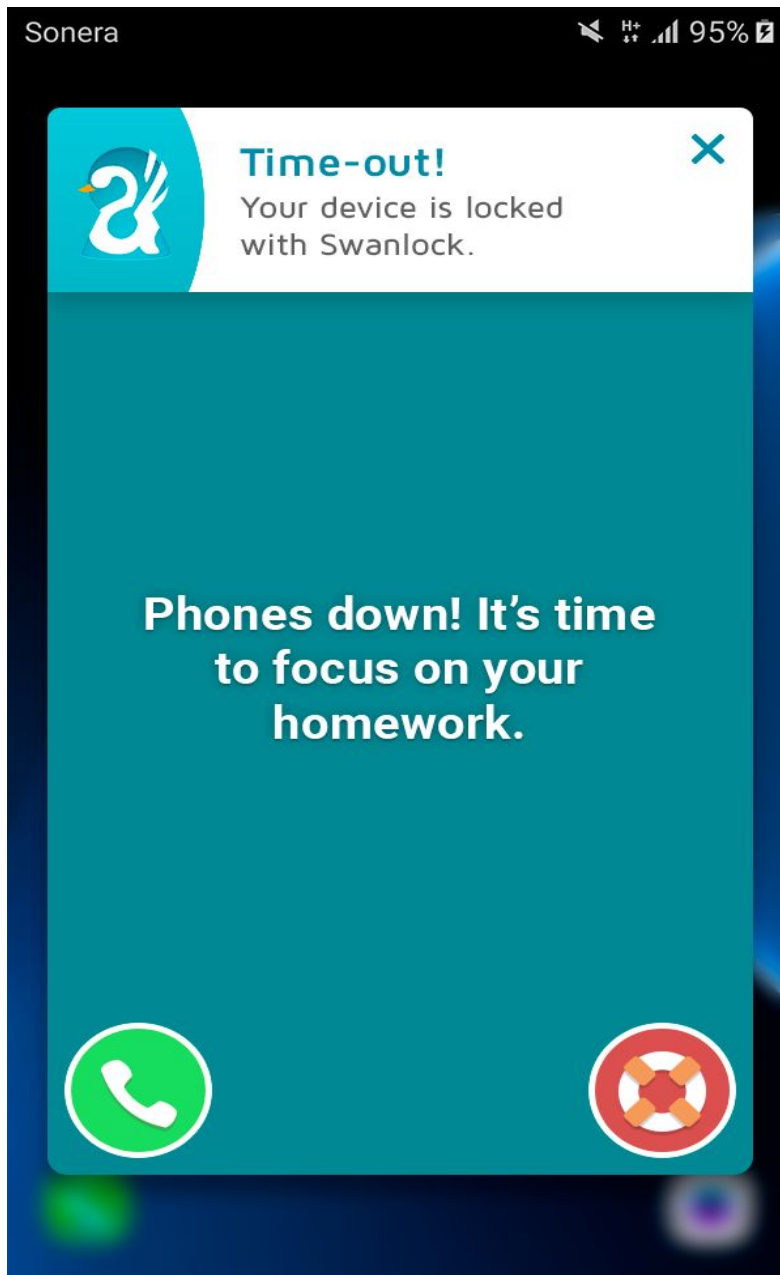

Swanlock is incredibly easy to use and it's developed with your privacy and cybersecurity at heart. After installing Swanlock on your Android smartphone, you are asked whether your device is a parent device or a child device. Parent devices can set time-outs for child devices, locking the device and leaving only the lock screen visible, with a customized message sent from the parent device. Locked child devices can always contact the general emergency number or multiple emergency contacts you have set up for the device.

After you have set up the parent device, install Swanlock on your child's Android phone and set it as a child device. Then click "Add new child device" from your parent device and set up a name, emergency contacts, which the child can contact even if the device is locked, and PIN-code that unlocks the device for the child device and finally scan the QR code from the child's smartphone. And you're all done!

By configuring your parent device, you can set up different timers for different child devices and customize them by weekdays and the time of the day. Let's say you want to set a time-out for when it's time to do homework, you can set up the times on the timer and set which child devices will be locked when the timer launches. You can manually lock the child devices from the device list when relatives come to visit and it's definitely time to put those smartphones down! Accompany the time-out with a customized photo message to really get that message through.

Unlocking child devices is just as easy and you don't have to worry about your child falling in danger without their smartphone, since they can always contact the emergency number or one of the multiple emergency contacts you can set up for them.

Swanlock is developed as a lightweight version of our holistic family digital wellness app, Swantry. Swanlock only includes features that allow you to teach children how to use smartphones responsibly timewise, whereas Swantry is a comprehensive family wellness suite that includes multiple other features to keep your family secure and healthy in this digital age. Read more about Swantry below.

Upcoming features in future versions

1. Snap a photo or attach an image with the lock message
2. Keep track of your child's smartphone usage with device use counters
3. Set a limit for the child device usage time that locks the device when the limit is reached
4. Full Parano protocol integration
