

Com-Guard.com, Inc Announces Its Strategy as it Enters into the Security Blockchain Technology Market Using the Raspberry Pi.

Encinitas, California—December 6, 2017, Com-Guard.com, Inc. (CGUD.pk), the technology company that has been designing and developing security applications for over 15 years has announced that it is going to standardize on the **Raspberry Pi** Development Platforms using Linux based Software and ARM Architecture Hardware to develop low cost and high-performance solutions in the Security and Tracking Markets and is planning on implementing the Blockchain Software on the Raspberry Pi Platform.

As mentioned previously, According to Travis Biehn, technical strategist at enterprise software and solutions firm Synopsys, the blockchain is "no silver bullet" for security, but the technology holds promise as a way not only to record financial transactions but also as a means to control network communication, as well as Internet of Things (IoT) devices and supply chains.

"We are currently using the Raspberry Pi Platform for Hardware and Software development. The Raspberry Pi platform is now the third largest selling hardware platform of all time, said Dr. Edward W. Savarese, CEO of Com-Guard.com, Inc. as stated in a recent article titled **“The Raspberry Pi is now the third best-selling computer of all time.”** By David Nield March 18, 2017 , he stated that “The Raspberry Pi is now the third best-selling general purpose computer of all time”.

In a recent article, “Blockchain as the answer to IoT challenges” in the Spring of 2017, Nicolas Windpassinger, author of “Digitize or Die”, an IoT book for transformational leaders, wrote about practical aspects Blockchain can address in IoT and how blockchain can accelerate the evolution of IoT.

Com-Guard, Inc. will be focusing on the IoT market segment using its software and hardware development expertise. As previously announced, the Company intends to focus on the three market segments of Security Applications, Tracker Applications and Secure Printing, said Dr. Edward W. Savarese, Chief Executive Officer of Com-Guard.com, Inc. The following article says it all about why the Company has chosen the Raspberry Pi as its solution for the Hardware and Software Platform of its products. In an article by Jason Hiner, March 5, 2017 titled, **“Why Raspberry Pi is the future of computing devices”**, he stated, “On the strength of its new \$10 Raspberry Pi Zero W, it's hard not to look at the Pi and see

the technology industry's next wave. With the Internet of Things on pace to grow from 6 billion devices in 2016 to over 25 billion in 2020--according to Gartner and IDC--we're entering an era where technology will become smaller, cheaper, and far more inconspicuous. Perhaps the flagship device of this new era is the Raspberry Pi.”

In an Article by Tom Conte. “Deploying a private Ethereum blockchain on Azure and a Raspberry Pi” on 30 May 2016, he stated, “As part of exploring the blockchain technology, and specifically the Ethereum ecosystem, I have settled on an IoT-related use case around solar energy grids. You can read more background in the first article in this series. I am going to use an Azure virtual machine to start a reasonably powerful mining node, and a **Raspberry Pi 3** to simulate an on-premises equipment running a lighter, non-mining node, but which can still be involved in blockchain transactions.” It is important to note that he is using the **Raspberry Pi 3** Hardware and Software platform.

The Company is focused on entering the Security market using the **Raspberry Pi** Platform said, Dr. Edward W. Savarese, CEO of Com-Guard.com, Inc

About Com-Guard.com, Inc. (Pink Sheets: CGUD.pk), (www.com-guard.com) Com-Guard, Inc. has been accepted as a developer for the fastest growing mobile platforms, Apple iPhone™, iPad™ and Android™. The Company intends to port its award-winning software, ComputerSafe® to create security applications in the mobile and netbook markets. In addition, it has entered the market for tracking items and events through the use of GPS, public databases and transactions.

The Company’s products are Missed Call Tracker™ and DataCrypt™ currently selling in the Apple App store. The company has been a player in the security software market for over 15 years.
