

OTC Markets Group

Joining us today is Aleksandra Binkowska the CEO of Hydrogen Utopia PLC that trades on our OTCQB venture market under the ticker HUIPF. Hydrogen Utopia is pioneering non-recyclable waste plastic to hydrogen technology, addressing the major of environmental fat posed by waste plastic and providing alternative energy sources, not dependent upon the use of coal gas, oil, and fossil fuel derived electricity. Alexandra, thanks so much for joining us today.

Aleksandra Binkowska

Thank you much for having me. Thank you. The view is gorgeous.

OTC Markets Group

Thank you. So let's get started. Tell us just a quick story about your background, your experience as an entrepreneur, and then how you got involved with Hydrogen Utopia.

Aleksandra Binkowska

Sure. So I believe that my career could be divided into to parts. Firstly, I was involved in a, I was a journalist I studied journalism, political sciences and I was a part of a company that was listed on the Warsaw stock exchange market and I was involved in art trading. So modern art was my domain and this gave me the background experience of stock exchange markets in general. And my second big part big part of my, my life was that I had a, a company. I was running a company dealing with tourist buses, tourism, and, and, and I was making sure that Americans and Australians would have a great time in Europe. And, and I had a fleet of buses. I have a fleet of buses still, and it made me actually think that there has to be a change.

Of course COVID hit in the meantime, and, and the, there has to be a change when it comes to heavy vehicles. I mean, I knew that we have to stop fossil fuels and this is what European union, where I come from, but in general, the world is just stopping fossil fuels. So if tourism has a, has a future, it has to be has to be fueled by something else. Right? And then I thought electricity theses are not the answers. They can be an answer for cars, right? So, but, but it can be for heavy vehicles. They have very, very long ranges. They have to travel very long distances and hydrogen is just the only opportunity, the only chance for that. So I believe that heavy vehicles have to be fueled by hydrogen. And this is how I got involved with hydrogen technologies. And then I run into a technology that is British technology and, and, and I decided to just get, get involved with it. And, and, and there's a long story short. So, so Hydrogen Utopia was started in in the

beginning of the end of 2020, October, 2020. So the COVID year, really, the pandemic year, which was very important to me. And now we are, it's, it's nearly two years old, so, yep.

OTC Markets Group

Yeah. Okay. So, and then now give us an overview of your technology and then, you know, also, you know, the broader mission and vision.

Aleksandra Binkowska

So basically what is fundamental to me that, that, that, that the technology is that we destroy plastic, at a profit, we destroy plastic and we create out of plastic, very important gases. So this is a thin gas and hydrogen, which I believe is a fuel of the future. As I mentioned before syn gas is even more important. So because we have we are experiencing a conflict in, in, in Ukraine. And, and there'll be, Europe is suffering from extreme gas shortages. We are talking about the fact that we'll, we are facing a very, very cold winter. I mean, I think something that you as Americans don't suffer from but Europeans do and will Brussels for example said that we'll have to just buy ourselves very warm sweaters and Thermal force.

And, and we have to just save energy, which is kind of like frightening because we got very comfortable and we got used to the, the fact that Russian gas will always be flowing and it's just not the case anymore. So our technology provides provides, can provide Europe with independence, energy independence, but, but the most important thing is that we actually like internationally can clean up the world from plastics. And there's a study made that basically believes that we are eating a credit card a week. So, microplastics are everywhere. They're in the water, they are in our food, you know, no matter how, how healthy you wanna live, they're just everywhere. So we just, we just need to make sure to get rid of it. And as I said, what is important to us is that we do it at a profit and, and we are being paid to get, people are paying us to take the plastic. And then of course they're paying for the offtake. So the hydrogen is syn gas. So we are paid from both ends, which I think is a great business model. This, this is just, you know, it's a, it's a extremely ecological friendly initiative, but it's also a very profitable one, which, which I really want to underline. Yep.

OTC Markets Group

Yeah. And so on that note, so what markets are you specifically focused on? You know, is it, is it us, is it Europe? Is it you know, the broader world and also, what is your, you know, in, in general, your project pipeline, what does that look like?

Aleksandra Binkowska

Sure. So, frankly speaking, you see, I was, I was raised in the us, I mean, it doesn't sound like it, but I was, I lived here for five years with my mother when I was a child. And my mother always thought that U.S. is the place where things happen. And, and this is the, like the place of make believe. And, and I, I dreamt of America for a very, very long time, but I am Europe centric. My first projects are European based. So the first one I, I signed up with in, in, in, in Poland, in Cony, it's a, a town which basically was running on coal for a very, very long time under the communist. So now EU is shutting down all the coal power powered stations, and they need an alternative and our system can give people jobs.

And this is the whole idea. This is where I have a idea to build 10 plus systems in, in its place, but I'm focused now on island, island is my main main target due to many regulations connections a perfect land, which I found there. Then there is Germany. I'm very, very close with looking at now, there's Bulgaria. So I've actually opened a pipeline which, which I'm broadening up pretty much every, every month. But us also is very, very important to me, as I said I believe that we need a big brother. We need we, we need help from a big brother a big company that'll help us help us rolling out the technology as fast as possible, because I believe that the world needs this needs to get rid of the plastics in a profitable way. And, and yeah, so, so I think that, frankly, I'm just, I just, I would love, I would love in the, in the, in the European union and in the us, and this is where I'm focusing my attention on.

OTC Markets Group
Excellent.

Aleksandra Binkowska
That's why I'm here.

OTC Markets Group
Indeed, you are. You're in New York. Yep. okay, so let's move on. What, what is Hydrogen Utopia looking forward to for the rest of 2022 and onward to next year 2023?

Aleksandra Binkowska
Well, we are we are actively searching for investors obviously, but we are at the same time building the technology. That's what we are doing. We are, we are ordering long lead items. We are designing the technology, redesigning it

because of course it is a sophisticated system. We, our big, big, big name is Linda, Linda, which is the biggest gas company in the people who deal with gas in the, in the world, 150 billion company. And so we are dealing with them in order to build the system, roll the system out. And, and yeah, I believe that that, that this is what we are focusing on. Just building a technology and spreading the word about a UI and making our project pipeline bigger. As I said, I mean, my biggest ambition, and I think my biggest goal is to find a big, broader, as I said, some big company who help us rolling it out faster, because I believe actually that, you know, like if you go back to second world war, you could build things, things like that very, very quickly, you just need lot of money, all of engineers, and you can have it done actually, you know, like much faster than, than I would anticipate. It's just all about finding help.

OTC Markets Group

Yeah. Yeah. How has cross trading on the OTCQB Venture Market been beneficial for your U.S. investor strategy?

Aleksandra Binkowska

Well, I believe that this is, this is incredible because I mean, it's, it's very, very positive just because it opens the doors to America. And as I said, America, United States was my big dream and, and still is. And, and, and, and I think this as my mother taught me, and this is how I, what I believe that this is the place where things, things happen. So just, this is just the door opener, and this is just the beginning and I, I have great ambitions and I believe that that, yeah, we will actually make it here, so we'll make it here and in the EU. And so it's very beneficial. I'm very excited and very grateful and yeah, that's all

OTC Markets Group

Well, Alexandra, it's been a pleasure to speak with you in person in our New York city offices. Thank you so much for your time today.

Aleksandra Binkowska

Thank you very much.
