OTC Markets Group

Joining us today is Vanessa Luna. Chairwoman. and Steve Luna. the CEO of Alternative Ballistics Corporation that trades in our OTCQB Venture Market under the ticker ALBC. Alternative Ballistics Corporation is a public safety technology company. focused on developing patented, lethal solutions designed to preserve life, reduce risk and protect individuals in high stress situations. The alternative is a patented system intended to bridge the capability gap between traditional, less lethal tools and lethal force by providing a controlled force option designed to de-escalate critical incidents. Vanessa and Steve, thanks so much for joining us today.

Steve Luna

Thank you so much.

Vanessa Luna

Thank you.

OTC Markets Group

Absolutely. So, to start, provide an overview of the company and the problems you're working to solve.

Steve Luna

Sure. So Alternative Ballistics Corporation is a public safety technology company that has developed a proprietary bullet capture system. that is able to convert a semi-automatic weapon into a less lethal. Our company currently has two flagship products. The first is called the alternative, which is designed for law enforcement. And the second is called Home Defense, created for consumer focused on self-defense and home protection.

OTC Markets Group

And so, what is your driving mission behind developing these, less lethal technologies?

Steve Luna

Our driving mission is pretty simple. Our goal mainly is to provide more options as pertains to de-escalation with the goal of preserving life.

OTC Markets Group

Absolutely. And walk us through how the alternative, your patented product, works in a real-world scenario.

Steve Luna

Okay, so I'll start with... with law enforcement. So, law enforcement, you know they have encounters with people in crisis, mental health issues. and a lot of times these less lethal options are not readily available. They're either in the trunk of the vehicle, have to be called up to the scene. So, we recognize that as a gap. that our technology can bridge. and the situations where you would actually utilize the alternative is for situations where one lethal force is justified, but the subject has a deadly weapon other than a gun. like a knife a bat a broken bottle So officers make a conscious decision. They have time distance. They go in there with a planned event. They can utilize our technology and attach it to their weapon within a matter of less than two seconds. On the civilian side, it's another option to safely store your weapon. It helps prevent liability because you know every situation is different. But you have to be justified in how you react to those situations. So, it gives homeowners another option. To stop a threat. Without having to take a life.

OTC Markets Group

So, do law enforcement currently have other solutions or, you know, as far as... you know less, you know, more, less lethal tools that they use rather than your product, that would be a different alternative.

Steve Luna

Absolutely. They have several. of less lethal tools such as the 40 millimeter the beanbag shotgun taser and these tools are all great, but when you're encountering a subject that has a deadly weapon, based on the use of force continuum, the officers, the first thing they're gonna do is they're gonna draw their weapon. And what makes our technology unique is the fact that you don't have to surrender your firearm. So, it's an attachment and it doesn't require a separate platform. But there are several options for law enforcement. That's exactly what our technology is. It's another option.

OTC Markets Group

And which industries are you targeting? As far as you mentioned, law enforcement, you know, there's also military, perhaps private security, or even, you know, home, you know, home consumer, you know; consumers in their own home come for protection.

Steve Luna

It's going to be all the above. Essentially, they all complement each other. um So anyone in the public and private sector. That's our target market. It's any lawful gun owners. And as you said, military, law enforcement and private security are also the market that we're after.

OTC Markets Group

And what feedback have you received from law enforcement professionals during testing and demonstrations?

Steve Luna

So, we conducted several demos here in the United States, also internationally. and the feedback has been all positive you know when they come out to take a look at a new technology they conduct their testing evaluation and they recognize that this technology has a place. So, it's been really positive for us. and we've been able to expand out, and we're getting a lot of positive recognition.

OTC Markets Group

Absolutely. And also, one. question about the actual product of the system so it is a one-time use, or you can use it over and over again as far as attaching it to a you know another weapon

Steve Luna

It's a one-time use. So, the way the technology works is that our proprietary bullet capture system there is a projectile that has a cavity in the middle of it and when an officer attaches it to their weapon, The first shot. enters that cavity. And it slows the bullet down by roughly 80%. We've done extensive testing to make sure that it's safe; it's effective. And when the projectile goes down range, it hits the subject with no penetration. But once that bullet enters that cavity, it essentially welts itself in there. So, you cannot reuse it. And the docking mechanism that we have. It's actually compatible with about 70 % the firearms that law enforcement carries. So, it's compatible with the Glock, Smith & Wesson MP. SIGs, CZs, and we can make it for any semi-automatic weapon.

OTC Markets Group

Okay. Excellent. And maybe for Vanessa, you know, talk about as you trade on the OTCQB venture market. What is your capital market strategy for building a public company?

Vanessa Luna

Sure. Our capital market strategy is really about building the company in stages. and just making sure that the public market growth follows the operational growth of the business. So, the OTCQB really provides us with the platform today to build our public market track record. expand our shareholder base, increase market awareness, and more importantly, access capital as we execute on commercialization. So, at the same time, we understand that being a successful public company is about much more than just raising capital. It's about transparency, strong governance, investor communication, but ultimately, it's about execution. So, as we achieve milestones, we believe that it will allow us to attract a broader and increasingly more institutional investor base. So, the long-term objective and position for alternative ballistics is always going to be to execute and then potentially look at a uplisting to a senior exchange when we meet the appropriate qualifications.

OTC Markets Group

All right, wonderful. And do you have a website that... you know consumers and investors can reach you at

Vanessa Luna

We do. So, you can follow us on our ticker symbol, which is ALBC. and reach us through www.alternativeballistics.com, or you can reach out to our investor relations firm, MZ Group. We're definitely accessible, available, and would encourage the public to continue to follow our story.

OTC Markets Group

all right wonderful well it's been great talking with you vanessa and Vteve. Thanks so much for your time today.

Steve Luna

Thank you so much.

Vanessa Luna

Thank you.

OTC Markets Group

Absolutely. Alternative Ballistics Corporation trades under the symbol ALBC. on our OTCQB Venture Market.
