

OTC Markets

Joining us today is David Nikzad, the CEO and co-founder of Cloud3 Ventures that trades on our OTCQB venture market Under the ticker C-L-D-V-F based in Canada Cloud3 Ventures operates at the forefront of blockchain innovation, specializing in the life ecosystem the company provides infrastructure solutions to enable the next generation of decentralized applications.

David, thanks so much for joining us today.

David Nikzad

Great being here. Aloha.

OTC Markets

Talk about your vision for energy freedom, decentralized intelligence, and trustless architecture for cloud three.

David Nikzad

Well, I think the narrative is pretty clear in the world right now that AI is going to be definitely revolutionary. And I think the one desire for AI and blockchain is compute, power and energy. And we are very grateful to work with Harry Yay, who is the founder of life because his desire is clean, free energy and a immutable blockchain built from carbon where AI and blockchain can run with a hundred percent clean free energy. And when I explain this to people, it's a lot for people to take in. And what has connected us with Harry is the fact that we've invested in probably north of 500 companies out of our family office and we are able to bring a lot of IP and ecosystem support to be able to guide his vision forward.

OTC Markets

Yeah, that's a lot to explain. So tell us more about this life ecosystem and how your vision to revolutionize decentralized finance.

David Nikzad

Well, I think everybody has sort of come to the gist are many people that have been moving into crypto that people want to control their own money. And with this revolution of defi or decentralized finance, we envision a world now where you will control your own money on your own wallets, you will control your own information and all of that. It candidly is going to be your own somewhat personal ip. And at the end of the day, we believe that people are going to want to control

up that information. They're not going to necessarily want to have everything in the cloud with people like Google and Chat GPT. So the idea is to look at where the world is going with AI and energy and to be always ahead of that and to understand where the disruption needs to happen. And I think when you have entrepreneurs like Harry and others that we work with that have built multi-billion dollar businesses, they're moving also into a stage where they want to create projects with deep purpose. So our attraction with the life ecosystem is definitely a project that is really about repurpose and seeing the world in a place where clean energy and AI will help us candidly be better humans. As Elon Musk says, it is the search to understand the universe and high consciousness, again, probably a lot to take in for most people, but I sometimes don't think people know the engine behind Cloud3 Ventures.

OTC Markets

With the acceleration of AI's role in reshaping businesses, including your own, what in your opinion are the pros and cons of this new technology?

David Nikzad

Listen, I think cons are humans themselves, not the ais because the humans are the ones doing the programming, but I think that if we can ultimately sensitize humans and use AI as a positive, there's just many benefits from it. I think at the end of the day there's been a culmination of humans, especially after COVID, where we can't live without these devices, these phones in our hands, and we're constantly needing to be tapped in. So the idea of being able to create your own large language model based on your own sentient cognitive biases from your brain and being able to have agents that can handle everything for you very precisely is pretty unbelievable. When you look at a company like ours or multiple companies within our ecosystem, unfortunately a lot of the redundant tasks that we had employees doing, we've consolidated. And at the end of the day, we believe people can go after purpose-based projects in their own life and almost elevate their own self-consciousness.

OTC Markets

What is your growth forecast over the next several years?

David Nikzad

I mean, I never want to give any forward looking statements, but I would say that we are incorporating AI as 99% of what we're working on. Obviously looking at

blockchain and an AI working together, which again, I don't think it's a surprise that both take a lot of energy, but the fact that somebody like Harry A is working on his aspirational thought of an arc reactor that could provide a hundred percent clean energy tied to a stable coin is pretty unbelievable. And those are the projects that we want to be involved with. When I look back to 2008 and 2009 and I was sitting with John Stein in New York City and he said, I'm going to revolutionize the banking system and everything's going to be digital and we're going to manage people's money online, and we see a company like that today managing a hundred billion dollars and they also are in the digital asset space. Those are the aspirational people that we want to work with that have gone from high paying Wall Street jobs or they've already taken a company public or sold a company public, and now they want to work with something that is dmic or has deep purpose.

OTC Markets

As you trade here on the OTCQB venture market. Tell us about your goals for expanding a US investor base.

David Nikzad

I mean, I would say that the US is probably our number one desire. So I think the big portion of it now is to incorporate the investors within our family office inside of this listing. So to say that most of our investors in our community fundraising in our family office are US investors. So I think it's going to be an organic, it is going to organically grow because we're starting to tell our investors that we are the largest shareholders in this public vehicle.

OTC Markets

Well, David, it's been a pleasure to speak with you and thanks again for joining us from Hawaii and we look forward to our continued partnership.

David Nikzad

Thank you very much. We appreciate you.
