

OTC Markets Group

Joining us today is Morgan Lekstrom the president and CEO of Silver Hammer Mining that trades on our OTCQB Venture Market under the ticker HAMRF Silver Hammer Mining Corp is a junior resource company acquiring and exploring. Past producing silver mines and the western USA it is focused on the Cor Eileen mine district in Idaho and the Eliza silver project in the historic Hamilton District as well as the Silverton silver mine both in Nevada. Morgan thanks so much for joining us today.

Morgan Lekstrom

Yeah, thanks for having me appreciate it.

OTC Markets Group

So Morgan you were recently appointed president and CEO of Silver Hammer tell us how your professional experience and how it translates to your new role with the company. So.

Morgan Lekstrom

It's it. It was a but natural progression I would say in my career to go from building mines around the world working for companies such as Freeport MacMoran in Indonesia working on large sites like the Togoy project in Mongolia and spending time in Africa and bringing. Past producing minds back to life. So as I said it was it was a very natural progression to join a junior mining company. That's looking at building a significant producing company with large exploration payoff and the way that my experience translates directly across is as we explore I am able to. Pull the right team members in and as myself look at how we can turn these assets into production but also keep focused on that large exploration payoff for our shareholders.

OTC Markets Group

So can you update us some developments for your flagship project sites.

Morgan Lekstrom

Absolutely let's start with our flagship mine. The Silver Strand in the Quaurlane mining district in Idaho so we picked up that project and actually we started the company in May we picked up that project in late June and then I joined the company and we were able to expedite the permitting. And the drilling programs by utilizing the existing underground and going back and rehabilitating it by doing that we were able to have a very cost effective method of drilling underground and

## Podcast

testing for that mineralization. You know what we were really looking for there was there's a past producing mine and it had produced. Up into the mountains. So as you enter it was going up. We wanted to prove the thesis that there was strong mineralization of gold and silver below that and we were able to do that in a very very efficient cost effective manner by utilizing that existing underground but also having a large. Ah, land package there. We started to do some tests along surface and sampling and we're finding gold and silver mineralization all the way across that five kilometer land package so we're really excited to start testing that in the future now we transition down to our projects in Nevada we picked those up in September. We successfully executed sampling geochemistry on one of our projects and sampling program on the eliza project and that gives us a clear definition of what we need to complete at the start of this year to get to that drill targeting standpoint and the geological understanding. So. All 3 very exciting and large potential assets.

OTC Markets Group

So talk about the strategic advantages you have in the region.

Morgan Lekstrom

Yeah, so the advantage for us is that we were able to expedite our silver strand project into drilling and work with the us forest service hand in hand in Idaho to get the permits to drill the surface by utilizing a new drilling method. In the us and and working with the drilling contractor to come up with an environmentally friendly and low impact way to drill on surface as well utilizing that existing underground for that. Very good. Ah ROI on drilling and that makes us unique in in the fact that we now have the ability to drill and to test all these surface anomalies and surface exposures that we found during this summer season without having to run a rigorous 2 wo-year program like a lot of other folks are having to do so we're bringing in new technology. We're advancing it very quickly. And in a very methodical method but also proving our concepts over and over and over.

OTC Markets Group

So excellent Morgan can you talk about the types of trends you are seeing in the global silver market.

Morgan Lekstrom

So it's interesting I think that the silver market isn't trending the way it traditionally would you know you see inflation skyrocketing usually silver and gold would increase. But I think in in this my own opinion that having cryptocurrency in there. And in taking that investor focus away from the traditional gold and silver hedges.

## Podcast

You've created a weird inverse or an inflection point. So that I think actually what's going to happen is as we progress and the easing happens. Um, the. Silver and gold price are actually going to do a bit of a reversal and they're going to go up even though we're bringing they're trying to taper on the inflation I think it's going to create a commodity boom because we have not had enough investment into this sector. But also there hasn't been enough. Investors coming into this sector and seeking that you know safe haven that commodities give but also with the green technology happening in the silver space that massive increase in demand for silver is is right around the corner they say by 2032 or by 2030 I think it's near double. And there is not enough capacity out there right now in the silver market to do that. So it's going to be an exciting few years and I think for Silver Hammer it's going to be an exciting year this year because this is a year I think we get very big, really quick.

OTC Markets Group

What is in the pipeline for Silver Hammer in 2022

Morgan Lekstrom

It's a great question. Well we completed all the work. We said we're going to do in 2021 if not quite a bit more by adding our 2 Nevada assets in getting that drill program completed now looking into 2022. It's that continuation on our flagship. Mine. The silver strand mine. Continuing to drill tests that to depth just like the large mines in the area they go down very deep down to about eighteen hundred meters or for some folks in the us that's just about Eight thousand feet um we want to test that but we also want to test a long strike. So that whole five kilometer land package where there's these outcrops and our geologists have identified areas that hold silver and gold grades. We want to start testing those to prove that silver strand not only is a single vein mine that it's also a multivain large exploration potential mine. While concurrently developing plans and drill programs that are Nevada assets that lies in Silverton by running geophysics and sampling programs those assets also have extremely high potential given that you know I'll talk about the Eliza asset. Sampling we did last year at very high grade silver Fifteen hundred and forty grams but also high grade copper just under 7 % and lead in zinc so there is ah there is a very large potential for copper porph free on our eliza project and our silverton project now. Also. We're looking at what we're doing there and we actually just started doing work on that this week just doing some sampling work and some more geological understanding so lot of progression happened in a short order in our on our flagship mine and by bringing these assets in and we're looking to keep up that momentum in that trajectory going forward.

## Silver Hammer Mining Corp. Season 6 | Episode 6

OTC Markets Group

Silver Hammer recently began trading on the OTCQB Venture Market and has also traded on the csc how does cross trading on the OTCQB Market enhance your investor strategy here in the US.

Morgan Lekstrom

It really opens up for us that American influence in the in the American investors being that we're mainly focused on the western United States we wanted to make sure that we had a means for. Um, folks in the United States to invest in our company and it really just brings awareness the OTCQB Market is very well known and has a strong outreach so being dual listed really opens up that Canada and us market that we wanted to do and it's very common in the industry. For junior mining companies especially ones working in the United States

OTC Markets Group

So well, it's been a pleasure talking with you today Morgan thanks for your time Silver Hammer mining trades under the symbol HAMRF on our OTCQB Venture Market.

Morgan Lekstrom

Thank you very much I appreciate it.
