

**OTC Markets**

Joining us today is Rudolph Gentile, the chairman for SosTravel.com that trades on our OTCQB Venture Market under the ticker SOSAF. SosTravel is a digital travel company offering booking services and digital itineraries, including flight information and airport information car rental proprietary experiences and services through their SosTravel and Filio apps. Rudolph, thanks so much for joining us today.

**Rudolph Gentile**

Thank you for having me here.

**OTC Markets**

So, Rudolph to begin, tell us about your background and how you got involved with SosTravel.

**Rudolph Gentile**

I was born and raised in a family of pilots my uncle and my fatherwork captain in the major airlines in Italy and eventually it turns out my father to make his own airline that became the first private airline in Italy in Europe then he built Air Italy and I started working with him in the airport's arena. And on his side in the various sector of the company but a certain moment I felt the urge to do something that was mine and so it is I started creating my own company in the travel world.

**OTC Markets**

Talk about the general services you provide and your target market of consumers and regions for SosTravel.

**Rudolph Gentile**

So SosTravel comes out of a dream. The dream of creating a platform that is capable of aggregating all the services that the flying passengers needs when traveling. Information about the airports about the flights the opportunity to buy different services that you need when you travel insurance proprietary services that we develop. We're going to talk later like lost luggage cons search and dot travel and frankly get a 1 ne-stop solution where you. Going to have everything you need your change rate. You need to understand how you're going to move when you're land in Tokyo and get to your hotel. It's it better to get a cap or a bus. What's going to be the cost. So our goal is to provide all these information to clients. In a simple way through a platform that aggregates all these information in

---

just a few clicks avoiding avoiding anyone who's traveling to have to deal with multiple apps which give you a waste of time getting in one and then in the other and and so on. So we're working towards this goal of having a one-stop solution that helps the passengers retrieve all the information. All the services. All the things that are around a trip from home. To the final destination

### **OTC Markets**

Tell about your venture into telemedicine and how this provides medical assistance for travelers.

### **Rudolph Gentile**

Well Dr Travel is something we are very proud of is something we created under covid we realize that that. Was a need for people to to understand how they wear and without getting out of their homes and having and having the risk of getting in contact with other ill people in hospitals. So it. It happened that. We realized that we could create a product that is capable of helping passengers around the world in their own language with their own medical protocols. So let's say you're from the United States and you're traveling and you are in India but you still want to have your. Personal medical protocol to follow you while you're in India or the opposite way. So the goal is to create a platform that is capable to help passengers have access have immediate access without waste of time twenty four seven to a doctor that helps and what we consider all the major. Minor illness because our studies have demonstrated that 17% of the people that travel they get sick and this type of sickness is ah due to the fact that you're traveling far. You're getting contact with people in the aircraft different countries. Different food. You stop maybe taking certain medicine medication. There is the jet lag so many things but the real problem is that a very simple illness many times you just need advice or knowing if you have to take an ibuprofa or an aspirin or something else.

So it could be many different help and and having the opportunity to have a doctor on your side that right away in a few minutes can give you the right direction we believe it's going to be ah, very successful. And when you're traveling you really don't want to waste your time in searching for a doctor going to the doctor. Maybe you're invocation you burned yourself. Ah you took too much son or you you're bed with your stomach and really simple things that can be sold pretty easy with that. Doctor that can give information right away just with a phone call and then you go in the pharmacy and you can take those medicine the doll over the counter for 90% of this case. So we believe that this is going to be something pretty strong for the future. Um, and eventually. We're looking to invest considerably to to deploy this new service. We have created with so many other tech based travel services companies.

## **OTC Markets**

What is your competitive advantage in this space?

### **Rudolph Gentile**

Well so we believe that. The idea on which we are structuring our company who want to create a one-stop solution is what makes the difference. So let's say you're going on booking dot com to get your you to get to buy your tickets or you're going on the other one. So the goal is you go on.

On our pace if you want you can buy the ticket there and get all the full experience from the buying on ticket till till you get to your hotels so technically the idea is that we are aggregating hundreds of different apps. You don't know what is this change rate or you're parking you want to put your chase the parking in the airport or maybe you want to decide whether it's going to be worth it or faster to go with a cab or with your car and what's going to be the cost with the parking and everything so we're working on creating a platform that gives our clients. Opportunity to understand the different choices. He can make and the different prices and make the best solution and on top of this as we said we are creating specific services many of the services we are aggregating from third from third parties then we have. Our own services like doctor travel like lost luggage can search where you lose a luggage wherever you are in the world and you got a team of people that's going to help you retrieve the luggage or you get it within forty the hours so we're going to pay you a penalty of \$100 if we were not able to to. Achieve the likeage for you and get it back to you or to please. It's really something that now people is worth it because for very little price. You get someone helping you people don't want to lose time time is our most valuable asset today.

So we really want to give value to time and that's our goal with ssoistravelldotcom we really help people shrink down the time organizing the trip their vacation and giving access. Not only to a plethora of information. But. Also to specific services that can be put chased in app directly and integrated in their experience in the traveling.

## **OTC Markets**

What's on the horizon for SosTravel in 2024?

### **Rudolph Gentile**

we're looking to do some acquisition. So our goal. Is to expand our footprint and

---

services and so we have several target company that we're looking into and hopefully. Funnel more clients into our apps and into our services and

**OTC Markets**

Finally, how does cross trading on the OTCQB market complement your US IR strategy here?

**Rudolph Gentile**

Well we believe that having the opportunity to increase our shareholders in the United States will give. Bring us a big benefit. So I been living 10 years in Miami and I always say where we created the app in Europe but the brain was been developed here in the United States so ah definitely we would like to to. Ah, create an appeal and create a base of shareholders here in the United States

**OTC Markets**

Well Rudolph thank you so much for your time and visiting it with us here in New York at our offices.

**Rudolph Gentile**

Thank you.

**OTC Markets**

Thank you again ah SosTravel.com trades under the symbol SOSAF on our OTCQB Venture Market.
