

OTC Markets

Um, joining us today is Regan Isenor the president and CEO of Sylla Gold that trades on our OTCQB Venture Market under the ticker SYGCF. Sylla Gold Corporation is Canadian company focused on the acquisition and evaluation of gold properties in southwest Mali West Africa. Regan thanks so much for joining us today. Tell us a bit about your background in the mining industry and your involvement with Sylla.

Regan Isenor

Ah, no, thank you for having me Cecilia. Yeah, so I've been involved in the mineral exploration industry. Ah prominently gold since I would say 2005 in some capacity. Um Sylla, I've been involved in this company for quite a while it was a a. It was previously a ah industrial minerals company which we yeah we kind of rebranded rolled the limestone asset out and clean the share structure up a bit and kind of bespoke the pro performer company for this this particular project new oriny in in Southern Mali

OTC Markets

Um, the company is focused on West Africa and particularly as you said Mali, walk us through your time working there and your current projects.

Regan Isenor

Ah, yeah, so we we've been in ah in Malley we by we I mean myself and the the management and and discovery team that's working on new alini here and here right now. Um previously. We've been ah involved with wal in in Burkinina Faso with um. Jibi gold which was sold to high river gold that was the piece of hill deposit and then the group moved on to to ah Merrick's gold which discovered theerabba indiiaka deposit and that was subsequently sold to um I am gold and then that same ah kind of discovery team. Ah. Transitioned into roscan gold which which found the the mankuy candioli discovery and then has since moved on from that one a new new management team is running roscan and now the ah the group is is focused on new orlini so it's it's a team that. Really ah knows the geology in the the west african green zones very well. We've had great success in the past. So I think we're kind of hitting this one hitting the ground running on this one.

OTC Markets

How to silent differentiate itself in a crowded field of Africa -focused minors

---

Regan Isenor

Well I think ah first and foremost as I as I touched on the the management team. You know we've we've done it in the past we've got a a good clean, ah share structure on this one. We've got um so it's you know we've we've had past successes. The team knows what they're doing. We're well connected in the area over there to. Which has enabled us to get things done. We've drilled our initial ah drilling program was around nineteen Thousand meters of ah of reverse circulation and predominantly reverse circulation in some air corps um that that was done majorly in the area about six kilometers south of ah of Tuani's kubata deposit where they've got about three million ounces so we had some big hit some big numbers there about you know some stuff like five grams per ton over Twenty five meters 2.1 three grams per ton over twenty five meters so so you know discovery discovery grade material and that's only about six Kilometers South of something that a deposit to banes kubata deposit which is going to go into production. Um, so it's I guess the second thing that differentiates us is ah is we're very strategically located. It's ah it's a great jurisdiction to be in and it's ah it's an area that's really you know heating up right now. I think you're going to see that it's ah that whole structure that hosts. Ah. Um, core golds Santa Cora deposit to the north then you keep going down that structure those shear zones and you hit to up addta deposit and then you come right into our property where we've made ah some some had some recent very good drilling success. So I'd say that the 2 things that differentiate us are management's track record of success and the the strategic location of the project.

OTC Markets

Um, what's next for you going into the new year

Regan Isenor

Yeah, so right now we're doing ah you know we're doing a little financing right now to to get us to the point where we can do ah put together another drill program. We're designing that program right now. It's going to be designed to accomplish a number of things we've got to you know? ah. Ah, you know a real ah resource coming together there at new and East South um so this one will be designed to do some infill drilling there to get us to the point where we can start to put together some some real ounces in that area and then there's some ah some followup drilling that's needed on other areas of the property that was identified by the the air course. So. Yeah, we're we're putting that program together. We've also got some field work to do on the ah the newliney west permit just to the west of our our main ah newiney permit and there's some past ah soil geochemical anomalies there with some very good numbers. So there's there's lots of gold in the area. It's just ah, we're at the point of ah. Defining some of those targets and

doing some infill drilling to build some resources.

OTC Markets

Excellent. You recently started trading on the OTCQB, why was it important for the company and your investors to upgrade to a premier market tier in the US?

Regan Isenor

Well, yeah I think um, you know the the American Market is certainly something we wanted to get exposure to um I think there's ah, there's a lot of good gold following investors in the Us and I think that that's Growing. You know it's growing every day down there in terms of. Guys that want to get some exposure to ah to not just gold but early stage exploration where there's ah, a discovery. You know that people can look at and say that's ah, a possibility.. It's good discovery in the near Future. Um, and apart from that we have ah our last finance and we did. There's a number of ah. American investors that came in so it made sense to provide some liquidity to those to those guys as well.

OTC Markets

Um, well Regan it's been a pleasure speaking with you. Thank you so much for your time today. Sylla Gold trades under the symbol SYGCF on our OTCQB Venture Market

Regan Isenor

Great. Thank you Cecilia.
