

## **LETTER TO THE SHAREHOLDERS**

**FEBRUARY 13, 2025**

**NAPOLEONVILLE, LA OTC:IFUS PK**

### **SIGNIFICANT COST SAVINGS PRODUCED IN HERD HYDRATION USING SGP+™**

In a blind trial occurring at the Oklahoma-Kansas border, a rancher has applied SGP+™ for 3 months. Prior to this trial, he conducted two highly additional trials that proved most successful. He is reporting record weight-gain, improved health and well-being of the herd to include calves, an improvement in meat quality, significant improvement in herd hydration and water requirements, and a decrease in overall costs with an increase in revenues resulting in significantly improved profit. Using Manure Scoring, he has blended SGP+™ with a ration mix that eliminated his most expensive feedstocks, while free range grazing the herds on pastures with forage considered to be poor at best. Yet, he out-performed his fellow ranchers in the area, such that these other ranchers are now requesting that he prepare ration for them. The basis of his ration mix is SGP+™, which has now created a regular revenue stream for IFUS and the rancher.

Furthermore, he is performing performance measurements, which he is sharing with IFUS. To this point, all measures on herd performance are incredibly encouraging. Once the blind trial is complete, he will provide final data to us which we will report. In addition, he states, "If every feedlot (cattle on feed report #) were feeding SGP, the amount of water saved would offset the amount of water needed to produce the pounds of corn used for the total amount of cattle by almost 79%. 12 million gallons a day equal 70 circles of corn at 125 acres per circle and 200 bushel per acre."

The impact of hydration on cattle, especially where water is scarce, is significant. Many ranchers have to negotiate "Water-Rights". The IFUS scientific team has corroborated the improved hydration of beef herds through an extensive review of a myriad of scientific studies. The team has identified any number of studies that state that when White-Rot Fungi interact with the lignin, one of the by-products produced from the degradation and depolymerization of lignin is, in fact, water. Furthermore, in the IFUS warehouse, test bales of SGP+™ are monitored for various changes. One such change is the formation of incredible water on the lining of the bales. The quantity of water is reflective of respiration of

the bales as the White-Rot Fungi degrade and depolymerize the lignin. This is actually physically obvious.

“The domestic and international implications of improved hydration of cattle especially in areas where water is in short supply, not to mention the reduced carbon-load from improved hydration of beef and dairy cows, places the entire IFUS team at awe and has the team more engaged and excited about the validation of a technology with implications far beyond that which was originally imagined,” said Marc Walther, CEO of IFUS. “We continue to advance on every front and remain dedicated to making your company profitable.”

“Lastly, I am so pleased to report that we received our first order for Intact Digest from Australia. We are continuing to expand our exposure through word of mouth, direct sales and internet searches.” said Marc Walther, CEO

Now, we are back to work once more!

### **About Impact Fusion International Inc.**

Impact Fusion International, Inc. is in the business of marketing products in the "Health and Wellness" sector of all international markets. It is the company's mission to invent, develop and market these proprietary products worldwide for the health and well-being of humans and animals.

The information contained in this release includes some statement that are not purely historical and that are "forward-looking statements." Such forward-looking statements include, but are not limited to, statements regarding our and their management's expectations, hopes, beliefs, intentions or strategies regarding the future, including our financial condition, results of operations. In addition, any statements that refer to projections, forecasts or other characterizations of future events or circumstances, including any underlying assumptions, are forward-looking statements. The words "anticipates," "believes," "continue," "could," "estimates," "expects," "intends," "may," "might," "plans," "possible," "potential," "predicts," "projects," "seeks," "should," "would" and similar expressions, or the negatives of such terms, may identify forward-looking statements, but the absence of these words does not mean that a statement is not forward-looking. The forward-looking statements contained in this release are based on current expectations and beliefs concerning future developments and the potential effects on the parties and the corporate and administrative transactions. Forward-looking statements involve known and unknown risks, uncertainties

and other factors, which may cause our actual results, performance or achievements to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements and represent our management's beliefs and assumptions only as of the date hereof. Except as required by law, we assume no obligation to update these forward-looking statements, even if new information becomes available in the future.
