

IndeXr to Launch Private Browser

Moon Equity Holdings and Revvim Announce Strategic Agreement to Launch IndeXr's Personal, Secure and Private (PSP) Browser by Year-End

AVENTURA, Fla. – June 5, 2025 – Moon Equity Holdings has announced that its wholly owned subsidiary, IndeXr, has signed a development and licensing agreement with Revvim Inc. to launch the IndeXr PSP Browser—a personal, secure and private approach to internet browsing—by the end of 2025.

The PSP Browser introduces a new standard in digital privacy. As a secure browser, the IndeXr PSP enables users to browse the web anonymously without relying on popular consumer VPNs or allowing search engines to, leverage user behavioral data, enhancing search experiences—all with greater privacy protections.

Under the agreement, IndeXr will deliver a suite of proprietary tools, including mobile and desktop web search applications and a dynamic distributor platform, all integrated into a growing network of anonymized devices. This infrastructure will support real-time, geolocated search results without compromising user privacy or performance, with Revvim actively supporting the growth and scaling of this network.

Distinctively, the PSP Browser operates without third-party anonymization layers or public cloud vendors. Instead, it leverages IndeXr's decentralized infrastructure, delivering transparency, resilience, and independence for its users.

Revvim provides businesses with technology to better manage their digital advertising budgets. Revvim has on boarded over 5 billion dollars of annual Pay Per Click marketing budget in 96 countries through its AdAi platform.

This partnership builds on the longstanding relationship between IndeXr CEO Steven Marshall and Revvim's leadership. Marshall, a key architect of Revvim's AdAi product, brings deep technical insight and a shared mission to this next phase of innovation. "Steve has been an integral part of Revvim's journey since the early days," said Matthew LeBaron, CEO of Revvim. "This agreement reflects our mutual commitment to building truly privacy-first technologies that scale."

"This browser is more than a product. It's tied to our philosophy," said Marshall. "We're creating a world where people control their own data, on their own terms, without intermediaries. I'm proud to bring that vision to life with the Revvim team as it is needed now more than ever."

The PSP Browser, expected to be deployed by year-end, underscores Moon Equity Holdings' commitment to technologies that foster operational resilience, digital sovereignty, and user empowerment.
