

## **VGTel, Inc. (OTCID: VGTL) Issues Statement on Atmospheric Observation and Civilian Data Collection**

**Lander, Wyoming — February 24, 2026**

**VGTel, Inc. (OTCID: VGTL)**, an astronomy and observational technology company developing distributed environmental monitoring systems, today issued a corporate statement regarding the growing national interest in aerial and atmospheric observations.

Recent public discussions, congressional briefings, and federal reporting requirements have highlighted an ongoing challenge: unusual aerial and atmospheric events are frequently reported, yet high-quality environmental measurements at the moment of observation are often unavailable.

**VGTel believes the central issue is not interpretation, but instrumentation.**

The Company is developing its MiraLink™ platform as a distributed observational and environmental sensing system designed to record measurable optical, radio-frequency, magnetic, and atmospheric data when events occur. The system is intended to operate as a mobile, deployable monitoring capability supporting scientific study, educational observation, and environmental measurement.

Rather than focusing on conclusions, VGTel's objective is to ensure future observations can be documented with calibrated data.

*"A scientific question requires scientific measurement," said Ken Williams, Chief Executive Officer of VGTel, Inc. "Our goal is to make observational tools more accessible and to ensure that when unusual aerial events are reported, instruments are already present to measure the environment."*

The Company's recent Northern Arizona field activities included initial environmental and communications validation testing of its sensing platform in real-world conditions. Additional field deployments and educational initiatives, including the upcoming Realtime Astronomy classroom platform, are planned as the Company advances development of its distributed monitoring network.

VGTEL emphasizes that its efforts are grounded in astronomy and environmental measurement and are intended to support scientific understanding through data collection and public participation.

**About VGTEL, Inc.**

VGTEL, Inc. (OTCID: VGTL) develops distributed observational science systems, environmental monitoring technologies, and real-time astronomy access platforms through its MiraLink™ initiative.
