

WIALAN TECHNOLOGIES, INC. (OTCMKTS: "WLAN")

FLASH NEWS

October 27, 2022

The Company has engaged Tony R. McDowell as a special adviser. Mr. McDowell previously served as Senior Director Network Engineering and Operations for T-Mobile USA covering South Florida and the Caribbean. He comes with a wealth of telecom technical and operational expertise and relationships to support the Company's future WiFi and Cellular development and expansion plans.

The Company has also acquired the exclusive license to build and sell a patented street light fixture that can host micro wireless devices, including cellular small cells for cellular operators, to significantly improve internet reception and connectivity from the reach of each street light pole. This product has been deployed already in a Miami Dade County city and in several sites in Mexico and is operating efficiently. The light fixture has the technology to host a variety of LTE devices and is also ready for the next generation of newer technologies, including 5G devices, as well as hosting Wi-Fi devices and video surveillance equipment. The light fixture is manufactured in South Florida,

The Company believes that this patented technology will substantially improve both connectivity and security in urban areas that presently suffer from insecure and unstable WiFi internet. The Company is developing plans to roll-out these devices in greater numbers to a variety of city locations, both in the U.S. and overseas, and these results are expected to be reflected during fiscal 2023 and increasingly thereafter.
