

International Consolidated Companies Shareholder Update

Brooksville, FL / November 30, 2023 / International Consolidated Companies [OTC: INCC]

What is AgTech Carbon

Sustainable Solutions with Swift Financial Returns.

Agtech Carbon is committed to delivering profitable, genuinely green alternatives that better the environment long-term. Patented technology ensures difficult barrier of entry by competitors and sets us up for swift financial returns while fostering sustainability.

The Problem

Earth faces a dual challenge of carbon waste and environmental degradation, leading to issues like toxic algae blooms and methane emissions. Agtech Carbon addresses these challenges head-on, providing a solution that cleans the environment while generating immediate returns.

Our Solutions

In 24 hours, pyrolyzing at 3 times the temperature of fire, our JV's Patent protected kilns transform hurricane debris and other feedstock (broken pallets, etc.) into high-quality biochar. This super carbon, used in agriculture and beyond, not only revitalizes soil but also serves as a carbon negative feed additive for cattle, reducing methane emissions and reducing toxins from their system, less gas equals more room to eat, equals more weight. Earth, Farmer and We win!!!

Market Opportunity

While this is a GLOBAL PROBLEM, we are focused on Florida, Agtech Carbon taps into a vast market opportunity for sustainable solutions. The increasing demand for eco-friendly alternatives positions us strategically within the green technology sector.

Business Model

Agtech Carbon generates revenue through biochar sales and strategic partnerships. Our pricing strategy ensures competitive market positioning, while distribution channels capitalize on existing agricultural networks and environmental initiatives.

Traction & Milestones

Executed 99 Lease on 15 acres for our first bamboo cultivation facility.

Formed key relationships with Philip Rucks Nursery (premier genetics for bamboo).

Executed JV agreement with BIOCHAR NOW for a BIOCHAR production site. (BioCharNow.com)

JV has USDA approval for use of carbon as organic animal feed additive.

We are working with Florida legislators to make bamboo an Alternative Crop for Citrus growers who have lost their farms to the evil citrus greening disease (It has reduced the Florida citrus from approximately 900k plus acres to 600k acres in 20 years).

“Let me net this out for you: Grow Pine Trees and wait for 40 years to remove enough CO2 to make a difference. Grow a particular species of bamboo and accomplish the same every 4-6 years. Take debris, that will rot on the ground contributing to global warming, pyrolyze it in a vacuum, using a patented system that passes California emissions standards, and we remove 3 tons of CO2 for every 5 tons of feedstock **ALL IN 24 HOURS!!!** This is Green that makes CENT\$. Current price of our high-quality BioChar is \$2,000 a ton. Takes 5 tons of Feedstock to make 1 ton of Biochar.”-Tony Uccello, Founder.

Additionally, the company is in talks with several other farms (to lease/buy) for future bamboo cultivation.

“Will share more as it happens. Our pipeline is filling daily. We are very excited to not only increase shareholder value but make a better planet for our posterity!”-Alex Gimelstien
