Impairment of Long-Lived Assets

The Company evaluates the recoverability of long-lived assets and the related estimated remaining lives at each balance sheet date. The Company records an impairment or change in useful life whenever events or changes in circumstances indicate that the carrying amount may not be recoverable or the useful life has changed. During the periods ended December 31, 2020 and December 31, 2019, the assets of Enzolytics were fully depreciated as no longer using the assets for that division of business when the Company decided to acquire the assets of Immunotech and no events or circumstances occurred for which an evaluation of the recoverability of long-lived assets was required in 2020.

Loss per Common Share

Basic net loss per share is calculated based on the weighted-average number of common shares outstanding. Diluted net loss per share is calculated using the weighted-average number of common shares outstanding plus common stock equivalents. Common stock equivalents are excluded from the calculation of diluted net loss per share when their effect is anti-dilutive.

Stock-Based Compensation Arrangements

The Company accounts for stock-based compensation arrangements in accordance with guidance provided by the Financial Accounting Standards Board Accounting Standards Codification ("ASC"). This guidance addresses all forms of share-based payment awards including shares issued under employee stock purchase plans, stock options, restricted stock and stock appreciation rights, as well as share grants and other awards issued to employees and non-employees under free-standing arrangements. These awards are recorded at costs that are measured at fair value on the awards' grant dates, based on the estimated number of awards that are expected to vest and will result in charges to operations.

From time to time, the Company's shares of common stock have been issued as payment to employees and non-employees for services and the reduction of debt. These are non-cash transactions that require management to make judgments related to the fair value of the shares issued, which affects the amounts reported in the Company's accompanying financial statements for certain of its assets and expenses.

Income Taxes

The Company account for income taxes pursuant to ASC Topic 740, “*Income Taxes*”. Under ASC Topic 740, deferred tax assets and liabilities are determined based on temporary differences between the bases of certain assets and liabilities for income tax and financial reporting purposes. The deferred tax assets and liabilities are classified according to the financial statement classification of the assets and liabilities generating the differences.

Deferred Offering Costs

The Company defers as other assets the direct incremental costs of raising capital until such time as the offering is completed. At the time of the completion of the offering, the costs are charged against the capital raised. Should the offering be terminated, deferred offering costs are charged to operations during the period in which the offering is terminated.

Recent Accounting Pronouncements

The management of the Company does not believe that any recently issued, but not yet effective, accounting standards, if currently adopted, would have a material effect on the accompanying financial statements.

(2) Going Concern

Management of the Company believes that the Company will be successful in its capital formation and operating activities, there can be no assurance that it will be able to raise additional equity capital or be able to generate sufficient revenues to sustain its operations. The Company also intends to conduct additional capital formation activities through the issuance of its common stock to establish sufficient working capital and to expand its operations.

The accompanying financial statements have been prepared in conformity with U.S. generally accepted accounting principles (GAAP), which contemplate continuation of the Company as a going concern.

The Company has incurred an operating loss since inception and the cash resources of the Company are insufficient to meet its planned business objectives. These and other factors raise substantial doubt about the Company’s ability to continue as a going concern. The accompanying financial statements do not include any adjustments to reflect the possible future effects on the recoverability and classification of assets or the amounts and classification of liabilities that may result from the possible inability of the Company to continue as a going concern.

Derivative liabilities

Certain of the Company's convertible notes are convertible into a variable number of shares of common stock for which there is not a floor to the number of common stock shares the Company might be required to issue. Based on the requirements of ASC 815 Derivatives and Hedging, the conversion feature represented an embedded derivative that is required to be bifurcated and accounted for as a separate derivative liability. The derivative liability is originally recorded at its estimated fair value and is required to be revalued at each conversion event and reporting period. Changes in the derivative liability fair value are reported in operating results each reporting period. The Company uses the Black-Scholes option pricing model for the valuation of its derivative liabilities as further discussed below. There are no material differences between using the Black-Scholes option pricing model for these estimates as compared to the Binomial Lattice model.

As of December 31, 2019, the Company had existing derivative liabilities of \$1,008,604 related to various convertible notes. During the year ended December 31, 2020, \$64,624 in principal of these convertible notes along with accrued interest and fees of \$52,121 were converted into 1,025,676,038 shares of common stock. Also, \$185,378 in principal of these convertible notes along with accrued interest and fees of \$58,871 were converted into 941,078 shares of Series C Preferred stock. At each conversion date, the Company recalculated the value of the derivative liability associated with the convertible note recording a gain (loss) in connection with the change in fair market value. In addition, the pro-rata portion of the derivative liability as compared to the portion of the convertible note converted was reclassified to additional paid-in capital. During the year ended December 31, 2020, the Company recorded \$2,167,344 to additional paid-in capital for the relief of the derivative liabilities. The derivative liabilities were revalued using the Black-Scholes option pricing model with the following assumptions: conversion prices ranging from \$0.0001 to \$0.0002, the closing stock price of the Company's common stock on the dates of valuation ranging from \$0.0003 to \$0.0058, an expected dividend yield of 0%, expected volatility ranging from 324% to 383%, risk-free interest rates ranging from 0.12% to 1.53%, and expected terms of 0.25 years.

On December 31, 2020, the derivative liabilities on the remaining convertible notes were revalued at \$8,795,075 resulting in a loss of \$10,094,691 for the year ended December 31, 2020 related to the change

ENZOLYTICS, INC.
NOTES TO FINANCIAL STATEMENTS
THREE MONTHS ENDED MARCH 31, 2021

in fair value of the derivative liabilities. The derivative liabilities were revalued using the Black-Scholes option pricing model with the following assumptions: conversion prices ranging from \$0.0001 to \$0.0034, the closing stock price of the Company's common stock on the date of valuation of \$0.0054, an expected dividend yield of 0%, expected volatility of 383%, risk-free interest rate of 0.12%, and an expected term ranging from 0.25 to 1 year.

The Company amortizes the discounts over the term of the convertible promissory notes using the straight-line method which is similar to the effective interest method. During the year ended December 31, 2020, the Company amortized \$109,138 to interest expense. As of December 31, 2020, discounts of \$21,282 remained for which will be amortized through September 2021.
